## **Postglacial Vegetation Of Canada:**

**Post-glacial Vegetation of Canada** J. C. Ritchie, 2004-04 This book brings together all the available information about the complex history of vegetational and environmental change in Canada since the last Ice Age Professor Ritchie discusses the roles of climatic change wildfires diseases and biological factors in controlling the emerging patterns of new plant growth

**Canada's Vegetation** Geoffrey A.J. Scott, 1995-01-10 Canada's Vegetation includes comprehensive sections on tundra forest tundra boreal forest and mixed forest transition prairie steppe Cordilleran environments in western North America temperate deciduous forests and wetlands An overview of each ecosystem is provided and equivalent vegetation types throughout the world are reviewed and compared with those in Canada The integration of data on climate soil and vegetation in a single volume makes this an invaluable reference tool Canada's Vegetation is sure to become a standard textbook for those in the environmental sciences

North American Terrestrial Vegetation Michael G. Barbour, William Dwight Billings, 2000 This second edition provides extensively expanded coverage of North American vegetation from arctic tundra to tropical forests

Human Ecology of the Canadian Prairie Ecozone B. A. Nicholson, 2011 The Canadian Prairie Ecozone CPE is spatially defined by the foothills of Alberta on the west and the boreal forest parkland interface on the north and the east As members of the multidisciplinary SCAPE Study of Cultural Adaptations in the Canadian Prairie Ecozone Project the authors have synthesized a comprehensive account of the successive cultural lifeways and social practices of precontact groups that have succeeded one another over time and space in this region over the past 11 000 years

*Canada's Cold Environments* Hugh M. French, Olav Slaymaker, 1993 Low temperatures wind chill snow sea ice and permafrost have been primary characteristics of Canada's northern and alpine environments during the past two million years The evolution of Canada's cultural landscapes the processes of settlement of rural areas and the present interaction of Canadian industrial society with its biophysical environment are all deeply influenced directly or indirectly by the frigidity of the greater part of the country The phenomenon of global warming if it occurs will lessen this coldness but its impact on temperature extremes sea ice regimes vegetation snow distribution permafrost glaciers lakes rivers and mountain hazards are all the subject of intensive research the highlights of which are reviewed in Canada's Cold Environments Eleven of Canada's leading geographers geologists and ecologists provide an authoritative yet readable scientific statement about the physical nature of Canada's coldness They focus on the distinctive attributes of Canada's cold environments their temporal and spatial variability and the constraints that coldness places on human activity The book is aimed at environmental scientists at all levels who need informed overviews of the substantive findings on a range of cold related topics

Ecology and Biogeography of Pinus David M. Richardson, 2000-07-31 A comprehensive review essential for all involved in the management of natural and planted pine forests

Ecosystem Dynamics of the Boreal Forest : The Kluane Project

Vancouver Charles J. Krebs Professor of Zoology University of British Columbia, Edmonton Stan Boutin Professor of Zoology

University of Alberta, Rudy Boonstra Professor of Physiology and Zoology University of Toronto, 2001-03-31 The boreal forest is one of the world's great ecosystems stretching across North America and Eurasia in an unbroken band and containing about 25% of the world's closed canopy forests The Kluane Boreal Forest Ecosystem Project was a 10 year study by nine of Canada's leading ecologists to unravel the impact of the snowshoe hare cycle on the plants and the other vertebrate species in the boreal forest In much of the boreal forest the snowshoe hare acts as a keystone herbivore fluctuating in 9-10 year cycles and dragging along secondary cycles in predators such as lynx and great horned owls By manipulating the ecosystem on a large scale from the bottom via fertilizer additions and from the top by predator exclosures they have traced the plant herbivore relationships and the predator prey relationships in this ecosystem to try to answer the question of what drives small mammal population cycles This study is unique in being large scale and experimental on a relatively simple ecosystem with the overall goal of defining what determines community structure in the boreal forest Ecosystem Dynamics of the Boreal Forest The Kluane Project summarizes these findings weaving new discoveries of the role of herbivores turned predators compensatory plant growth and predators eating predators with an ecological story rich in details and clear in its findings of a community where predation plays a key role in determining the fate of individuals and populations The study of the Kluane boreal forest raises key questions about the scale of conservation required for boreal forest communities and the many mammals and birds that live there

**Flora of the Hudson Bay Lowland and Its Postglacial Origins** John L.

Riley, National Research Council Canada, 2003 The Hudson Bay Lowland is the Earth's largest more or less continuous temperate wetland landscape This book documents 816 native and 95 non native vascular plants in the context of the distinct geological history and ecology of the area It includes text and annotated checklist that are complemented by distribution maps and colour illustrations

*Geological Survey of Canada, Open File 1448* ,      **The Geography of Manitoba** John

Welsted, John Everitt, Christoph Stadel, 1996-03-15 Manitoba is more than one of Canada's three prairie provinces Encompassing 649 950 square kilometres its territory ranges from Canadian Shield to grassland parkland and subarctic tundra Its physical geography has been shaped by ice age glaciers while its human geography reflects the influences of its various inhabitants from the First Nations who began arriving over 9 000 years ago to its most recent immigrants This fascinating range of geographical elements has given Manitoba a distinct identity and makes it a unique area for study Geography of Manitoba is the first comprehensive guide to all aspects of the human and physical geography of this unique province Representing the work of 47 scholars and illustrated with over 200 maps diagrams and photographs it is divided into four main sections covering the major areas of the province's geography Physical Background People and Settlements Resources and Industry and Recreation As well as studying historical developments the contributors to Geography of Manitoba analyse recent political and economic events in the province including the effect of federal and provincial elections and international trade agreements They also comment on future prospects for the province considering areas as diverse as

resource management and climatic trends

### **Regional Geography of the United States and Canada** Daniel R.

Montello, Michael T. Applegarth, Tom L. McKnight, 2021-03-29 The fifth and thoroughly revised edition of *Regional Geography of the United States and Canada* provides a rich and comprehensive overview of both the physical and human geography of these two countries and in the true spirit of geography the interactions and interrelations of the physical and human. Following long traditions of the discipline of geography this text incorporates words maps drawings photographs and numerical data to present its information in an engaging way After covering beneficial precursor topics such as the basics of physical and human geography the text explores fifteen regions of the US and Canada The authors observe and describe our planet's geography in thorough and accessible detail while laying out the spatial basics of the location shape and size of the different regions and summarizes their most distinctive thematic qualities Physical topics covered include the region's topography and landforms soils climate hydrography vegetation and wildlife The human topics include the region's population the ethnicities and settlement history of its people economic activities including agriculture forestry mining fishing manufacturing and service industries cities and transportation In depth essays expand on specific topics of interest and importance while outlook sections prognosticate about the near future of the regions Each chapter concludes with a bibliography of books articles and reports that provide further sources for the interested reader

*Foundations of Macroecology* Felisa A. Smith, John L. Gittleman, James H. Brown, 2014-08-22 Macroecology is an approach to science that emphasizes description and explanation of patterns and processes at large spatial and temporal scales Some liken it to seeing the forest through the trees an apt ecological use of the proverbial phrase The term itself was introduced to modern literature by our authors James Brown and Brian Maurer in a seminal science paper in 1989 We then published books by both of these authors including Brown's *Macroecology* in 1995 which quickly traveled to the shelf of classics in ecology credited with cohering and inspiring a subfield of ecology proper While macroecology is to many a modern subfield the large scale perspective it advocates is implicit in earlier publications For example in 1898 de Liocourt studied the influence of management practices on the structure of French fir forests and characterized the distribution of tree size in three different stands His findings that in natural areas the number of trees declined exponentially with increasing diameter of the trunk allowed him to draw conclusions about the influence of management practices on tree distribution patterns Similarly other classic macroecological patterns including the species area relationship latitudinal gradient of species richness relationship between body size and metabolic rate species abundance distribution and species body size distribution were identified decades sometimes even centuries ago Consequently despite the scant twenty years that has elapsed since the term was coined macroecology has a deep and rich history *Foundations of Macroecology* traces and coheres that history charting an evolutionary trajectory to the rigorous macroecological research landscape science enjoys today The forty six papers span eight decades from 1920 to 1998 and include divergent perspectives of space time and taxonomic and habitat affiliation They

are organized into two main parts Macroecology before Macroecology and Dimensions of Macroecology The latter is further subdivided into six sections reflecting the subject matter Allometry and Body Size Evolutionary Dynamics Abundance and Distributions Species Diversity and Methodological Advances For each reprinted paper a macroecologist specializing in that area has written original commentary that places the paper in a broader context and explains why it is foundational

**Ecology of World Vegetation** O.W. Archibold,2012-12-06 The ecology of world vegetation is described in numer all of the drafting and photographic work They have ous books and journals but these are usually very spe spent many hours on this project and their care and skill cialized in their scope and treatment This book provides is reflected in the consistently high quality of the illus a synthesis of this literature A brief introductory chap trations throughout the book Many friends and col ter outlines general ecological concepts and subsequent leagues have provided photographs It has not been chapters examine the form and function of the major possible to include all of them but the global perspect biomes of the world A similar organization has been ive of the book has been greatly enhanced in this way used for each biome type These chapters begin with a I wish to thank them all for the time and trouble they description of environmental conditions and a brief have taken to supply this material I must also thank account of floristic diversity in a regional context The Mary Dykes and the staff of the interlibrary loans de remaining pages describe characteristic adaptations and partment of the Library University of Saskatchewan ecosystem processes for their unfailing ability to get even the most obscure Although there is a rapidly growing literature on eco references

**After the Ice Age** E.C. Pielou,2024-05-31 A valuable new synthesis of climate geography and life during the past 20 000 years an intimate appreciation of the rich variety of nature S David Webb Science The fascinating story of how a harsh terrain that resembled modern Antarctica has been transformed gradually into the forests grasslands and wetlands we know today One of the best scientific books published in the last ten years Ottawa Journal This nicely written narrative weaves together information from several scientific fields providing the reader with the big picture Library Journal

**Geological Survey of Canada, Current Research (Online) no. 2003-C3 , Biotic Feedbacks in the Global Climatic System** G. M. Woodwell,Fred T. Mackenzie,1995 The problem of global warming is among the most intensely studied and debated topics in ecology and environmental science But one possible contributor to global warming biotic feedback has until now not been addressed with any serious sustained attention Featuring papers prepared for a meeting held at Woods Hole to explore the topic this book provides for the first time a comprehensive overview of the many issues associated with interactions between biota and global warming With contributions from internationally respected scholars in the field the book will prove invaluable to students and researchers in ecology climatology and environmental science
