Postharvest Physiology And Storage Of Tropical And Subtropical Fruits:

Postharvest Physiology and Storage of Tropical and Subtropical Fruits S. K. Mitra, 1997 Tropical and subtropical fruits are becoming more important food items in countries where they are produced and also in an increasing number of importing countries in non tropical zones For many of the countries where they are grown these crops represent one of the primary ways of earning valuable foreign exchange In the last few years fruit production in most tropical and subtropical countries of the world has increased substantially and most of the fruits grown in these regions now have established and growing markets in North America and Europe The transport of tropical and subtropical fruits from areas of production to markets in temperate zones raises particular postharvest storage issues while postharvest losses in the tropics themselves can be considerable Whilst there are several texts addressing the postharvest needs of temperate fruits there has not until now been a comprehensive volume dealing with tropical and subtropical fruits This volume is the first book to deal with the postharvest storage physiology and conservation of all of the economically important tropical and subtropical fruits Contributors include leading research workers from throughout the world including Europe North Central and South America Australia New Zealand East and Southeast Asia and the Middle East The resultant work represents a substantial contribution to this important and fast developing area The book is essential reading for all horticultural researchers and students working with these crops and for growers exporters and importers within the industries concerned with tropical and subtropical fruits Postharvest Physiology And Storage Of Tropical And Subtropical Fruits S. and illustrations Foods of Plant Origin D.K. Salunkhe, S.S. Deshpande, 2012-12-06 The present world population of about five billion and its projected growth cre ate enonnous pressures and demands for food and industrial raw materials It is to crop plants one of our precious few renewable resources that we must look to meet most of these needs Globally about 88% of our caloric requirements and 90% of our protein ultimately derive from plant sources ample evidence of their importance to humankind Our survival will therefore continue to depend on the world's largest and certainly most important industry agriculture Yet in spite of our long history of domestication and civilization the number of crop species involved in sustaining human life is strictly limited Essentially some twenty four crops protect us from starvation To know these basic food crop plants to study how they function and how their productivity may be improved is the first step in solving the world food problem The primary objectives in writing this book were to address this challenge and to review comprehensively the wealth of available yet scattered infor mation on food crop productivity and processing Unlike several other texts and monographs in this field the present work was intended to give in a single volume a quick infonnative view of the various problems from field to table concerning the major food crops worldwide The Mango Richard E. Litz, 2009-01-01 The Mango is one of the oldest cultivated fruit crops having been grown in India for at least 4000 years Mango is the most important fruit crop of Asia and its annual production is exceeded worldwide only by Musa citrus grapes and apples The last decade has seen a rapid growth of mango production mainly due to expansion into new growing regions but also to the adoption of modern field practices and cultivars A wide range of fresh mango cultivars are now consumed worldwide and are available year round The Mango Botany Production and Uses published in 1997 represented the first comprehensive examination of all aspects of modern mango production and research Developing upon the successful first edition this book incorporates a discussion of significant advances in mango research that have contributed to improved production and will be highly relevant for researchers and growers alike **Color Atlas of Postharvest Quality of Fruits and Vegetables** Maria Cecilia do Nascimento Nunes, 2009-03-03 The effects of time and temperature on the postharvest quality of fruits and vegetables are visually depicted in the Color Atlas of Postharvest Quality of Fruits and Vegetables Through hundreds of vibrant color photographs this unique resource illustrates how the appearance e g color shape defects and injuries of fruits and vegetables changes throughout their postharvest life and how storage temperature greatly contributes to critical quality changes The book s extensive coverage describes 37 different fruits and vegetables from different groups that were stored at five specific temperatures and photographed daily after specified elapsed periods of time Individual fruits and vegetables from the following groups are covered subtropical and tropical fruits pome and stone fruits soft fruits and berries cucurbitaceae solanaceous and other fruit vegetables legumes and brassicas stem leaf and other vegetable and alliums Information is provided about each individual fruit vegetable such as characteristics quality criteria and composition recommendations for storage transport and retail and effects of temperature on the visual and compositional quality of each

individual fruit or vegetable associated with photos of the appearance at particular times and temperatures This visual documentation shows how important is to handle fruits and vegetables at the right temperature and what happens if the recommendations are not followed Also shown is the importance of the initial harvest quality of the fruit vegetable and the expected shelf life as a function of quality at harvest storage temperature and storage time The Color Atlas of Postharvest Quality of Fruits and Vegetables will appeal to a diverse group of food industry professionals in the areas of processing distribution retail quality control packaging temperature control refrigerated facilities or equipment and marketing as a reference tool and to establish marketing priority criteria Academic and scientific professionals in the area of postharvest physiology and technology food science and nutrition can also use the book as a reference either for their study or in class to help students to visualize changes in the appearance of fruit vegetables as a function of time temperature
