human activity needs energy and renewable energies are always present all over the world Each location has its own specific renewable potential and it is our task to develop the suitable technologies to profit at local level this potential to not only produce the needed energy but also create economic activity and wealth Solar energy in particular has the highest potential among all existing renewable energies and in the context of the energy water and climate change global problems mankind will face in the coming years the substantial integration of solar energy technologies into our societies will be an absolute need in the short to medium term The number of applications of solar energy is simply huge covering a very wide range of human activities Some of these applications are already technically and economically viable being others still at research or demonstration level In addition it has been demonstrated the important benefits solar energy can provide to any area with medium high solar irradiation level from sustainability to energy independence as well as economic development and knowledge creation Due to this solar energy development from photovoltaic to solar thermal or power applications has been very intense during the last years in all the so called Sun Belt There is also the general consensus at many countries that we should accelerate the current solar energy pathway increasing the research efforts to make economically feasible the applications that today are only technically feasible This effort and the status of most of these applications have been discussed along this paper and within the articles of the topic The Theme on Solar Energy Conversion and Photoenergy Systems with contributions from distinguished experts in the field discusses solar energy related technologies and applications some of which are already in commercial and practical applications and others are under research and testing level The volumes provide an analysis and discussion about the reasons behind the current efforts of our society considering both developed and developing countries to accelerate the introduction of the huge solar energy potential into our normal daily lives The two volumes also provide some basic information about the solar energy potential history and the amazing trip of a photon from its creation in the Sun until its arrival to the Earth These two volumes are aimed at the following five major target audiences University and College Students Educators Professional Practitioners Research Personnel and Policy Analysts Managers and Decision Makers NGOs and GOs

Photochemical Conversion and Storage of Solar Energy E. PELIZZETTI, Mario Schiavello, 2012-12-06 The book collects the lectures and the status reports delivered during the Eighth International Conference on Photochemical Conversion and Storage of Solar Energy IPS 8 held in Palermo Italy from 15th to 20th of July 1990 As usual the main theme of the Conference was that of making the point about the trends and the developments of the studies related to the photochemical exploitation of solar energy and also to report the main lines of potential applications Therefore the contributions reflect this point they vary from those reporting basic and fundamental theories to those reporting cases of possible applications For the sake of following the logical line which links each other the various contributions we report the six areas in which the main theme of the conference was divided a Electron and energy transfer

in homogeneous and heterogeneous systems b Photosynthesis organized assemblies and biomimetic systems c Photoelectrochemistry d Photocatalysis homogeneous and heterogeneous regime e Environment photochemical and photocatalytic processes f Solar energy materials and photochemical engineering It remains now to thank persons and institutions which made possible the organization of the Conference The persons to thank are all the members of the International and National Organizing Committees and in particular Prof A Sclafani and Dr L Palmisano whose efforts were essential for the success of the Conference

Stability and Degradation of Organic and Polymer Solar Cells Frederik C. Krebs, 2012-04-02 Organic photovoltaics OPV are a new generation of solar cells with the potential to offer very short energy pay back times mechanical flexibility and significantly lower production costs compared to traditional crystalline photovoltaic systems A weakness of OPV is their comparative instability during operation and this is a critical area of research towards the successful development and commercialization of these 3rd generation solar cells Covering both small molecule and polymer solar cells Stability and Degradation of Organic and Polymer Solar Cells summarizes the state of the art understanding of stability and provides a detailed analysis of the mechanisms by which degradation occurs Following an introductory chapter which compares different photovoltaic technologies the book focuses on OPV degradation discussing the origin and characterization of the instability and describing measures for extending the duration of operation Topics covered include Chemical and physical probes for studying degradation Imaging techniques Photochemical stability of OPV materials Degradation mechanisms Testing methods Barrier technology and applications Stability and Degradation of Organic and Polymer Solar Cells is an essential reference source for researchers in academia and industry engineers and manufacturers working on OPV design development and implementation
