

Primary Water – Water for a Thirsty World

WHERE DOES WATER COME FROM, WHAT A SIMPLE QUESTION TO CONSIDER,
BUT DO YOU REALLY KNOW THE ANSWER?

"Primary water, the original source of our oceans, is still being created by geological forces. That water, usually in a potable form, comes to the Earth's surface in thousands of places, some well known like Jericho and Bahrain where it has provided drinking water for thousands of people for thousands of years. It pours into deep mines all over the world. The hallmark of new, or primary, water springs and wells is that they provide water at constant temperature and flow. But this worldwide source of "new water" has been ignored by geologists and laymen in most countries including the United States. They were taught that all potable

water comes from the "hydrological cycle" which merely recycles water already on the surface."

"Primary water is new water formed by chemical reactions deep in the Earth. This water, driven by massive pressure, works its way toward the surface through faults and fissures in normally impervious crystalline rock. While you may have to drill deeper for Primary Water, it is generally not subject to pollution or variations in rainfall, and usually sustains production for decades."

--- Michael H. Salzman, author of the deeply compelling book, "New Water For A Thirsty World", published in 1960.
