Poverty Of The Linnaean Hierarchy A Philosophical Study Of Biological Taxonomy:

The Poverty of the Linnaean Hierarchy Marc Ereshefsky, 2000-11-27 The question of whether biologists should continue to use the Linnaean hierarchy has been a hotly debated issue Invented before the introduction of evolutionary theory Linnaeus's system of classifying organisms is based on outdated theoretical assumptions and is thought to be unable to provide accurate biological classifications Marc Ereshefsky argues that biologists should abandon the Linnaean system and adopt an alternative that is more in line with evolutionary theory He traces the evolution of the Linnaean hierarchy from its introduction to the present He illustrates how the continued use of this system hampers our ability to classify the organic world and then goes on to make specific recommendations for a post Linnaean method of classification Accessible to a wide range of readers by providing introductory chapters to the philosophy of classification and the taxonomy of biology the book will interest both scholars and students of biology and the philosophy of science

Poverty of the Linnaean Hierarchy: a Philosophical Study of Biological Taxonomy (book Review)., 2005 [A Companion to the Philosophy of Biology](#) Sahotra Sarkar, Anya Plutynski, 2010-11-08 A COMPANION TO THE PHILOSOPHY OF BIOLOGY Sarkar is to be congratulated for assembling this talented team of philosophers who are themselves to be congratulated for writing these interesting essays on so many fascinating areas in philosophy of biology This book will be a wonderful resource for future work Elliot Sober University of Wisconsin Madison Many of the discussions here start with a definition of terms and a historical context of the subject before delving into the deeper philosophical issues making it a useful reference for students of biology as well as philosophy Northeastern Naturalist The topics that are addressed are done so well This book will appeal to the advanced student and knowledgeable amateur and may prove useful catalyst for discussion among research teams or those engaged in cross disciplinary studies Reference Reviews A Companion to the Philosophy of Biology offers concise overviews of philosophical issues raised by all areas of biology Addressing both traditional and emerging areas of philosophical interest the volume focuses on the philosophical implications of evolutionary theory as well as key topics such as molecular biology immunology and ecology Comprising essays by top scholars in the field this volume is an authoritative guide for professional philosophers historians sociologists and biologists as well as an accessible reference work for students seeking to learn about this rapidly changing field

A Hideous Monster of the Mind Bruce Dain, 2009-07-01 The intellectual

history of race one of the most pernicious and enduring ideas in American history has remained segregated into studies of black or white traditions Bruce Dain breaks this separatist pattern with an integrated account of the emergence of modern racial consciousness in the United States from the Revolution to the Civil War The Oxford Handbook of Philosophy and Psychiatry KWM Fulford, Martin Davies, Richard Gipps, George Graham, John Sadler, Giovanni Stanghellini, Tim Thornton, 2013-07-04 Philosophy has much to offer psychiatry not least regarding ethical issues but also issues regarding the mind identity values and volition This has become only more important as we have witnessed the growth and power of the pharmaceutical industry accompanied by developments in the neurosciences However too few practising psychiatrists are familiar with the literature in this area The Oxford Handbook of Philosophy and Psychiatry offers the most comprehensive reference resource for this area ever published It assembles challenging and insightful contributions from key philosophers and others to the interactive fields of philosophy and psychiatry Each contributions is original stimulating thorough and clearly and engagingly written with no potentially significant philosophical stone left unturned Broad in scope the book includes coverage of several areas of philosophy including philosophy of mind science and ethics For philosophers and psychiatrists The Oxford Handbook of Philosophy and Psychiatry is a landmark publication in the field one that will be of value to both students and researchers in this rapidly growing area The Philosophy of Death Steven Luper, 2009-05-28 A lively and engaging discussion about the nature of death and the permissibility or otherwise of killing **Genetic Analysis** Raphael Falk, 2009-05-14 There is a paradox lying at the heart of the study of heredity To understand the ways in which features are passed on down from one generation to the next we have to dig deeper and deeper into the ultimate nature of things from organisms to genes to molecules And yet as we do this increasingly we find we are out of focus with our subjects What has any of this to do with the living breathing organisms with which we started Organisms are living Molecules are not How do we relate one to the other In Genetic Analysis one of the most important empirical scientists in the field in the twentieth century attempts through a study of history and drawing on his own vast experience as a practitioner to face this paradox head on His book offers a deep and innovative understanding of our ways of thinking about heredity **Power of Position** Robert D. Montoya, 2022-05-24 How biodiversity classification with its ranking of species has social and political implications as well as implications for the field of information studies The idea that species live in nature as pure and clear cut named individuals is a fiction as scientists well know According to Robert D Montoya classifications are powerful mechanisms and we must better attend to the machinations of power inherent in them as well as to how the effects of this power proliferate beyond the boundaries of their original intent We must acknowledge the many ways our classifications are implicated in environmental ecological and social justice work and information specialists must play a role in updating our notions of what it means to classify In Power of Position Montoya shows how classifications are systems that relate one entity with other entities requiring those who construct a system to value an entity s relative importance by way of its position

within a system of other entities These practices says Montoya are important ways of constituting and exerting power Classification also has very real world consequences An animal classified as protected and endangered for example is protected by law Montoya also discusses the Catalogue of Life a new kind of composite classification that reconciles many local traditional taxonomies forming a unified taxonomic backbone structure for organizing biological data Finally he shows how the theories of information studies are applicable to realms far beyond those of biological classification

Every Living Thing Jason Roberts, 2025-06-10 Winner of the 2025 Pulitzer Prize for Biography An epic extraordinary account of scientific rivalry and obsession in the quest to survey all of life on Earth a competition with continued repercussions for Western views of race This vivid double biography is a passionate corrective The New York Times Book Review Editors Choice In the eighteenth century two men exact contemporaries and polar opposites dedicated their lives to the same daunting task identifying and describing all life on Earth Carl Linnaeus a pious Swedish doctor with a huckster s flair believed that life belonged in tidy static categories Georges Louis de Buffon an aristocratic polymath and keeper of France s royal garden viewed life as a dynamic swirl of complexities Each began his task believing it to be difficult but not impossible How could the planet possibly hold more than a few thousand species or as many could fit on Noah s Ark Both fell far short of their goal but in the process they articulated starkly divergent views on nature the future of the Earth and humanity itself Linnaeus gave the world such concepts as mammal primate and Homo sapiens but he also denied that species change and he promulgated racist pseudoscience Buffon formulated early prototypes of evolution and genetics warned of global climate change and argued passionately against prejudice The clash of their conflicting worldviews continued well after their deaths as their successors contended for dominance in the emerging science that came to be called biology In Every Living Thing Jason Roberts weaves a sweeping unforgettable narrative spell exploring the intertwined lives and legacies of Linnaeus and Buffon as well as the groundbreaking often fatal adventures of their acolytes to trace an arc of insight and discovery that extends across three centuries into the present day

Plant Variation and Evolution David Briggs, S. Max Walters, 2016-06-30 We are in the midst of a biological revolution Molecular tools are now providing new means of critically testing hypotheses and models of microevolution in populations of wild cultivated weedy and feral plants They are also offering the opportunity for significant progress in the investigation of long term evolution of flowering plants as part of molecular phylogenetic studies of the Tree of Life This long awaited fourth edition fully revised by David Briggs reflects new insights provided by molecular investigations and advances in computer science Briggs considers the implications of these for our understanding of the evolution of flowering plants as well as the potential for future advances Numerous new sections on important topics such as the evolutionary impact of human activities taxonomic challenges gene flow and distribution hybridisation speciation and extinction conservation and the molecular genetic basis of breeding systems will ensure that this remains a classic text for both undergraduate and graduate students in the field

Jonathan Z. Smith on Religion

Christopher I. Lehrich, 2020-12-31 Jonathan Z Smith 1938 2017 was unquestionably one of the most important and influential voices of critical reflection within the academic study of religion in the last century His work explored the nature and history of religious phenomena across cultures from ancient Jewish practices to Maori cults from early Christianity to mass suicide in the twentieth century while critiquing the assumptions underlying the very category of religion This important volume offers the first full critical assessment of the influence of Jonathan Z Smith's thought on the subject of religion Christopher I

Lehrich systematically examines and develops a critical overview that will assist others in engaging more fully with Smith's scholarship This book is an essential reading for students and scholars interested in the work of Jonathan Z Smith as well as the history of religion more broadly

Hierarchical Evolutionary-Developmental Theory Carlos Ochoa, 2025-06-23 This book introduces a new evolutionary model called Hierarchical Evolutionary Developmental Theory or H Evo Devo Theory This theory proposes that the organism's internal properties reflect entities that are highly integrated in developmental terms that evolve hierarchically In other words it attempts to demonstrate that developmental constraints operate at different scales producing distinct states of morphological stability reflected as subspecies species higher taxa and homologues all representing units of evolution In addition it reintroduces the concept of the organism in evolutionary biology supports a strictly macroevolutionary view and contemplates alternative evolutionary rates processes and mechanisms at different levels microevolution macroevolution megaevolution and modular evolution In short this book establishes a new synthesis between systematics morphology and evolution suggesting a significant shift in evolutionary thought The book comprises 1 A proposal for a new theory of evolution and systematics The H Evo Devo Theory reinterprets the concepts of subspecies species higher taxa and homologues proposing that the phylogenetic tree is built on a hierarchy of types developed from the top down in contrast to the traditional bottom up approach 2 A novel hierarchical perspective that reveals the underlying mechanisms acting on the patterns of divergence stability and extinction of the units of evolution 3 A resolution to the ontological problem regarding units of evolution e g the reality of species and higher taxa 4 A historical narrative that focuses on the development of a hierarchy theory of evolution grounded in the type concept and the significance of an organism centered perspective 5 A challenge to traditional frameworks that have sought to establish hierarchies in an evolutionary context 6 A challenge to classical evolutionary statements such as gradualism punctuated equilibrium the extrapolationist premise and geographical models of speciation This book is written for those who feel that radical change is needed in evolutionary theory offering them a viable alternative

Religion, Science, and Empire Peter Gottschalk, 2013 Peter Gottschalk offers a compelling study of how through the British implementation of scientific taxonomy in the subcontinent Britons and Indians identified an inherent divide between mutually antagonistic religious communities England's ascent to power coincided with the rise of empirical science as an authoritative way of knowing not only the natural world but the human one as well The British scientific passion for classification combined with the Christian impulse to differentiate people according to religion led to a designation of Indians as either Hindu or Muslim according to rigidly defined criteria that paralleled classification in botanical and zoological taxonomies Through an historical and ethnographic study of the north Indian village of Chainpur Gottschalk shows that the Britons presumed categories did not necessarily reflect the Indians' concepts of their own identities though many Indians came to embrace this scientism and gradually accepted the categories the British instituted through projects like the Census of India the Archaeological Survey of India and the India Museum Today's propagators of Hindu-Muslim violence often cite scientific formulations of difference that descend directly from the categories introduced by imperial Britain Religion Science and Empire will be a valuable resource to anyone interested in the colonial and postcolonial history of religion in India

Natural and Artifactual Objects in Contemporary Metaphysics Richard Davies, 2019-01-10 What is an object How do we look at them Why do they matter This collection presents a lively timely discussion of natural and artifactual objects considering the relationship between them from a range of philosophical perspectives including the philosophy of biology the metaphysics of space and the philosophy of perception Beginning from the starting point that natural objects are bona fide endowed with some natural border between themselves and everything else while artifactual objects depend on the observation of tacit conventions and may include the ordinary objects of everyday life this volume explores contextualises and interrogates objects Contributors discuss a variety of objects including physical scientific and mental ones as well as things that appear to question the limits of objecthood including holes Quinean posits and language The very first collection to address this growing topic within analytic philosophy Natural and Artifactual Objects in Contemporary Metaphysics represents a highly original work showcasing some of the most important and influential philosophers working in Europe today

Ancestors and Relatives Eviatar Zerubavel, 2012-01-26 Noted social scientist Eviatar Zerubavel casts a critical eye on how we trace our past individually and collectively arguing that rather than simply find out who our ancestors are from genetics or history we actually create the stories that make them our ancestors

Bringing Biology to Life Mahesh Ananth, 2017-10-30 Bringing Biology to Life is a guided tour of the philosophy of biology canvassing three broad areas the early history of biology from Aristotle to Darwin traditional debates regarding species function and units of selection and recent efforts to better understand the human condition in light of evolutionary biology Topics are addressed using no more technical jargon than

necessary and without presupposing any advanced knowledge of biology or the philosophy of science on the part of the reader Discussion questions are also provided to encourage reader reflection *The Intrinsic Value of Endangered Species* Ian A. Smith, 2016-01-08 Why save endangered species without clear aesthetic economic or ecosystemic value This book takes on this challenging question through an account of the intrinsic goods of species Ian A Smith argues that a species intrinsic value stems from its ability to flourish its organisms continuing to reproduce successfully and it avoiding extinction which helps to demonstrate a further claim that humans ought to preserve species that we have endangered He shows our need to exercise humility in our relations with endangered species through the preservation of their intrinsic goods which in turn rectifies our degradation of their importance Unique in its appeal to virtue ethics and to species concepts *The Intrinsic Value of Endangered Species* is an important resource for scholars working in environmental ethics and the philosophy of biology *Essence in the Age of Evolution* Christopher J. Austin, 2018-10-10 This book offers a novel defence of a highly contested philosophical position biological natural kind essentialism This theory is routinely and explicitly rejected for its purported inability to be explicated in the context of contemporary biological science and its supposed incompatibility with the process and progress of evolution by natural selection Christopher J Austin challenges these objections and in conjunction with contemporary scientific advancements within the field of evolutionary developmental biology the book utilises a contemporary neo Aristotelian metaphysics of dispositional properties or causal powers to provide a theory of essentialism centred on the developmental architecture of organisms and its role in the evolutionary process By defending a novel theory of Aristotelian biological natural kind essentialism *Essence in the Age of Evolution* represents the fresh and exciting union of cutting edge philosophical insight and scientific knowledge
