Cohen,2025-05-06 Music in Modern Japanese and Hebrew Literatures examines the place of classical music in early 20th century Japanese and Hebrew literatures As this book shows both Japanese and Hebrew writers of the period made use of Western classical music in their novels and short stories in order to explore issues of belonging cultural and literary identity and artistic integrity Hence by analysing the appearance of such music in the writing of Japanese writers such as Nagai Kaf Shiga Naoya and Uchida Hyakken and Hebrew writers such as Leah Goldberg Gershon Shofman and Yaakov Horowitz this book sets an intriguing narrative of writers interaction with a modernizing world and their struggles to make sense of multitudes of cultural influences Through such struggles these Japanese and Hebrew writers created unique visions of literature that constitute this book argues a cosmopolitan literary sphere In looking into these matters this book aims to recontextualize the place of Japanese and Hebrew literatures of the early 20th century in relation to each other as well as European culture and to create a new and exciting approach to the study of World Literature **Resources in Education**

The Evolution of Rhythm Cognition: Timing in Music and Speech Andrea Ravignani, Henkjan Honing, Sonja A.

Kotz, 2018-07-24 Human speech and music share a number of similarities and differences. One of the closest similarities is their temporal nature as both i) develop over time ii) form sequences of temporal intervals possibly differing in duration and acoustical marking by different spectral properties which are perceived as a rhythm and iii) generate metrical expectations. Human brains are particularly efficient in perceiving, producing and processing fine rhythmic information in music and speech. However, a number of critical questions remain to be answered: Where does this human sensitivity for rhythm arise? How did rhythm cognition develop in human evolution? How did environmental rhythms affect the evolution of brain rhythms? Which rhythm-specific neural circuits are shared between speech and music or even with other domains? Evolutionary processes on long time scales often prevent direct observation; understanding the psychology of rhythm and its evolution requires a close fitting integration of different perspectives. First, empirical observations of music and speech in the field are contrasted and generate testable hypotheses. Experiments exploring linguistic and musical rhythm are performed across sensory modalities, ages and animal species to address questions about domain specificity, development and an evolutionary path of rhythm. Finally, experimental insights are integrated via synthetic modeling, generating testable predictions about brain oscillations underlying rhythm cognition and its evolution. Our understanding of the cognitive, neurobiological and evolutionary bases of rhythm is rapidly increasing. However, researchers in different fields often work on parallel, potentially converging strands with little mutual awareness. This research topic builds a bridge across several disciplines, focusing on the cognitive neuroscience of rhythm as an evolutionary process. It includes contributions encompassing, although not limited to: 1) developmental and comparative studies of rhythm e.g. critical acquisition periods, innateness; 2) evidence of rhythmic behavior in other species, both spontaneous and in controlled experiments; 3) comparisons of rhythm processing in music and speech e.g. behavioral experiments, systems neuroscience perspectives on music speech networks; 4) evidence on rhythm processing across modalities and domains; 5) studies on rhythm in interaction and context, social affective etc; 6) mathematical and computational e.g. connectionist, symbolic models of rhythmicity as an evolved behavior. **Mangaddicts: French**

Teenagers and Manga Reading Christine Détrez, Olivier Vanhée, 2023-05-25 Just pronounce the word manga and conflicted representations of media reception emerge: either passive teenagers immersed in Japanese fictional worlds or hyperactive fans. To understand what drives a variety of teenagers to read manga, we conducted empirical research among French readers enrolled in secondary schools. Manga is part of a whole constellation of interests including music and digital technology. It is also the object of analytical, ethical or concrete appropriations. Reading then becomes a way to deal with past experiences and to connect with others to learn how to express emotions and to assert or contest age and gender norms.
