Most universities are now moving to online and distance learning systems to meet the needs of different types of learners 1

Indeed e learning is already being used by a number of universities 2 which offer online courses and degree programs The

online and distance learning systems can be used either to replace face to face learning or to assist students with face to face

learning Numerous different learning styles have been identified which take into account individual differences in the way

people learn The learning styles theory implies that how much individuals learn has more to do with whether the educational

experience is geared toward their particular style of learning than whether or not they are intelligent Individuals perceive

and process information in very different ways therefore there is a necessity for a learning system to take into account as

many details as possible in terms of the learning styles of the users 3
