Rapid Evolution:

Evolution Explosion Stephen R Palumbi, 2002-09-03 Evolution is not only the slow process that ruled the rise and fall of the dinosaurs over hundreds of millions of years It also happens quickly so quickly and frequently that it changes how all of us live our lives drugs fail because diseases evolve insects overcome the most powerful pesticides HIV and tuberculosis develop resistance to the newest drugs in a few months While the ecological scars of human technology have been well publicized the broad evolutionary consequences of antibiotic and antiviral use insecticide applications and herbicide bioengineering are largely unexplored Humans have a great impact on evolution Our impact remains largely accidental but our actions have generated a burst of evolutionary change that affects the entire natural world These changes come back to haunt us and affect our daily lives Written for a wide audience *The Evolution Explosion* examines the practical and critical aspects of modern evolution

The Evolutionary Ecology of Invasive Species Johannes Le Roux, 2021-10-24 *The Evolutionary Ecology of Invasive Species* offers new insights into the mechanisms that underlie rapid evolution in these species The book provides a comprehensive overview of achievements in the field during the boom of information over the past two decades and includes discussions of possible future directions for the study of evolution in invasive species Written by an international expert in invasion ecology population genetics and evolutionary biology the book explores the roles of preadaptation phenotypic plasticity selection and stochastic processes in driving rapid evolution The book draws insights from a wide spectrum of invasive microbes plants and animals covering many of the planet's biogeographic regions and discusses the evolutionary consequences for native species in response to biological invasions A valuable resource to researchers and students in evolutionary biology invasive species biology and global change biology this text suggests future research directions related to the evolutionary biology impacts and management of invasive species Highlights the most recent advances and developments in using evolutionary principles to study and manage invasive species Offers new and often overlooked insights in processes that govern rapid evolution Discusses key stages of population demography that underlie rapid evolutionary change in invasive species including their introduction naturalisation and dispersal

Rapidly Evolving Genes and Genetic Systems Rama S. Singh, Jianping Xu, Rob J. Kulathinal, 2012-06-28 A range of theories on the rates of evolution from static to gradual to punctuated to quantum have been developed mostly by comparing morphological changes over geological timescales as described in the fossil record

Relentless Evolution John N. Thompson, 2013-04-15 At a glance most species seem adapted to the environment in which they live Yet species relentlessly evolve and populations within species evolve in different ways Evolution as it turns out is much more dynamic than biologists realized just a few decades ago In *Relentless Evolution* John N Thompson explores why adaptive evolution never ceases and why natural selection acts on species in so many different ways Thompson presents a view of life in which ongoing evolution is essential and inevitable Each chapter focuses on one of the major problems in adaptive evolution How fast is evolution How strong is

natural selection How do species co opt the genomes of other species as they adapt Why does adaptive evolution sometimes lead to more rather than less genetic variation within populations How does the process of adaptation drive the evolution of new species How does coevolution among species continually reshape the web of life And more generally how are our views of adaptive evolution changing

Relentless Evolution draws on studies of all the major forms of life from microbes that evolve in microcosms within a few weeks to plants and animals that sometimes evolve in detectable ways within a few decades It shows evolution not as a slow and stately process but rather as a continual and sometimes frenetic process that favors yet more evolutionary change

Evolutionary Conservation Biology Régis Ferrière,Ulf Dieckmann,Denis Couvet,2004-06-10 As anthropogenic environmental changes spread and intensify across the planet conservation biologists have to analyze dynamics at large spatial and temporal scales Ecological and evolutionary processes are then closely intertwined In particular evolutionary responses to anthropogenic environmental change can be so fast and pronounced that conservation biology can no longer afford to ignore them To tackle this challenge areas of conservation biology that are disparate ought to be integrated into a unified framework Bringing together conservation genetics demography and ecology this book introduces evolutionary conservation biology as an integrative approach to managing species in conjunction with ecological interactions and evolutionary processes Which characteristics of species and which features of environmental change foster or hinder evolutionary responses in ecological systems How do such responses affect population viability community dynamics and ecosystem functioning Under which conditions will evolutionary responses ameliorate rather than worsen the impact of environmental change

Darwin's Reach Norman A. Johnson,2021-12-27 The application of evolutionary biology addresses a wide range of practical problems in medicine agriculture the environment and society Such cutting edge applications are emerging due to recent advances in DNA sequencing new gene editing tools and computational methods This book is about applied evolution the application of the principles of and information about evolutionary biology to diverse practical matters Although applied evolution has existed unrecognized for a very long time today s version has a much wider scope Evolutionary medicine has formed into its own discipline Evolutionary approaches have long been employed in agriculture and in conservation biology But Darwin s reach now extends beyond just these three fields It now also includes forensic biology and the law Ideas from evolutionary biology can be used to inform policy regarding foreign affairs and national security Applied evolution is not only interdisciplinary but also multidisciplinary Consequently this book is for experts in one field who are interested in expanding their evolutionary horizons It is also for students at the undergraduate and graduate levels One of the public relations challenges faced by evolutionary biology is that most people do not see it being all that relevant to their daily lives Even many who accept evolution do not grasp how far Darwin s reach extends This book will change that perception

Key Features Emphasizes the expanding role evolutionary biology has in today s world Includes examples from medicine law agriculture conservation and even national security Summarizes new technologies and

computational methods that originated as innovations based in part or whole on evolutionary theory Current Has extensive coverage of the COVID 19 pandemic and other recent topics Documents the important role evolution plays in everyday life Illustrates the broadly interdisciplinary nature of evolutionary theory Resources The applications of evolutionary biology are far too numerous to include in just one book Plus new scientific findings emerge almost every day underscoring the central role evolution plays in our lives The author has established a blog site to highlight these fascinating discoveries Please visit <https://darwinsreach.blog> to be inspired by endless forms most beautiful and most wonderful that have been and are being evolved the last line of Charles Darwin s *The Origin of Species* *Marine Genetics* Antonio M. Diversity of Functional Traits and Interactions Akihiko Mougi, 2020-10-30 This book presents new theoretical perspectives on ecological community dynamics and in so doing casts fresh light on the enduring complexity stability debate Real ecological communities do not simply comprise diverse species and interactions which respectively represented the nodes and links of the classic network theory Rather they are characterized by different types of complexity and this book explains how this diversity of complexity is key to understanding the dynamics of ecological communities It is shown how various properties in natural communities such as life history adaptation density dependence sex interaction types space functional traits and microbial processes can dramatically increase the complexity in ecological communities Furthermore innovative methods are introduced that may be applied to cast light on very complex communities With each chapter presenting the latest advances and approaches the book sets the direction for future research on ecological community dynamics It will be a must read for researchers and students in the field of ecology **Extracellular Matrix and Egg Coats**, 2018-05-28 Extracellular Matrix and Egg Coats Volume 130 the latest release in the Current Topics in Developmental Biology series highlights new advances in the field with this new volume presenting interesting chapters on The Human Egg s Zona Pellucida the Structure of Zona Pellucida Module Proteins The Fish Egg s Zona Pellucidam The Chicken Egg s Zona Pellucidam The Marsupial Egg s Zona Pellucida the Evolution of Zona Pellucida Proteins The Mouse Egg s Zona Pellucida Aspects of ECM ECM and Morphogenesis Collagen fibril assembly and function The Ear s Tectorial Membrane ECM and Cell Fate and the Aspects of ECM Provides the authority and expertise of leading contributors from an international board of authors Presents the latest release in the Current Topics in Developmental Biology series Updated release includes the latest information on the Extracellular Matrix in Development

Evolutionary processes and theory Evitar Nevo, 2012-12-02 Evolutionary Processes and Theory contains the proceedings of a workshop held in Israel in March 1985 Contributors explore evolutionary processes and theory and highlight advances in knowledge concerning differentiation metabolic and immunological mechanisms and the molecular biology of the genome Issues that are being debated are also considered including the origin and evolution of sexual systems the genetics of altruism and general forms and levels of social evolution This volume is organized into six sections encompassing 33 chapters

and begins with an overview of the evolutionary problems of molecular biology. Some chapters are devoted to topics such as the role of gene regulation in evolutionary processes, the structural diversity and evolution of intermediate filament proteins and adaptation and evolution in the immune system. The next section examines the tempo and mode of molecular evolution, including that of hybrid dysgenesis systems as well as the statistical aspects of the molecular clock. Later chapters focus on DNA and protein sequences, sexual selection and speciation, and the relation between speciation mechanisms and macroevolutionary patterns. The book also methodically explains population genetics with particular reference to the altruistic behavior in sibling groups with unrelated intruders, the endosperm evolution in higher plants, and the evolutionary aspects of sexual reproduction in predominantly asexual populations. This book will be of interest to geneticists and molecular biologists.

Microevolution Rate, Pattern, Process Andrew P. Hendry, Michael T. Kinnison, 2012-12-06 From guppies to Galapagos finches and from adaptive landscapes to haldanes, this compilation of contributed works provides reviews, perspectives, theoretical models, statistical developments, and empirical demonstrations exploring the tempo and mode of microevolution on contemporary to geological time scales. New developments and reviews of classic and novel empirical systems demonstrate the strength and diversity of evolutionary processes producing biodiversity within species. Perspectives and theoretical insights expand these empirical observations to explore patterns and mechanisms of microevolution methods for its quantification and implications for the evolution of biodiversity on other scales. This diverse assemblage of manuscripts is aimed at professionals, graduate students, and advanced undergraduates who desire a timely synthesis of current knowledge, an illustration of exciting new directions, and a springboard for future investigations in the study of microevolution in the wild.

From Ecology to Cancer Biology and Back Again Frederick R. Adler, Sarah R. Amend, Christopher J. Whelan, Etienne Baratchart, 2022-03-08

RNA, the Epicenter of Genetic Information John Mattick, Paulo Amaral, 2022-09-20 The origin story and emergence of molecular biology is muddled. The early triumphs in bacterial genetics and the complexity of animal and plant genomes complicate an intricate history. This book documents the many advances as well as the prejudices and founder fallacies. It highlights the premature relegation of RNA to simply an intermediate between gene and protein, the underestimation of the amount of information required to program the development of multicellular organisms, and the dawning realization that RNA is the cornerstone of cell biology, development, brain function, and probably evolution itself. Key personalities, their hubris, as well as prescient predictions are richly illustrated with quotes, archival material, photographs, diagrams, and references to bring the people, ideas, and discoveries to life from the conceptual cradles of molecular biology to the current revolution in the understanding of genetic information.

Key Features: Documents the confused early history of DNA, RNA, and proteins; a transformative history of molecular biology like no other; Integrates the influences of biochemistry and genetics on the landscape of molecular biology; Chronicles the important discoveries, preconceptions, and misconceptions that retarded or misdirected progress; Highlights major pioneers and contributors to

molecular biology with a focus on RNA and noncoding DNA Summarizes the mounting evidence for the central roles of non protein coding RNA in cell and developmental biology Provides a thought provoking retrospective and forward looking perspective for advanced students and professional researchers The Open Access version of this book available at www.taylorfrancis.com has been made available under a Creative Commons Attribution Non Commercial No Derivatives 4.0 license

The Geographic Mosaic of Coevolution John N. Thompson, 2005-06-15 Coevolution reciprocal evolutionary change in interacting species driven by natural selection is one of the most important ecological and genetic processes organizing the earth's biodiversity most plants and animals require coevolved interactions with other species to survive and reproduce The Geographic Mosaic of Coevolution analyzes how the biology of species provides the raw material for long term coevolution evaluates how local coadaptation forms the basic module of coevolutionary change and explores how the coevolutionary process reshapes locally coevolving interactions across the earth's constantly changing landscapes Picking up where his influential *The Coevolutionary Process* left off John N Thompson synthesizes the state of a rapidly developing science that integrates approaches from evolutionary ecology population genetics phylogeography systematics evolutionary biochemistry and physiology and molecular biology Using models data and hypotheses to develop a complete conceptual framework Thompson also draws on examples from a wide range of taxa and environments illustrating the expanding breadth and depth of research in coevolutionary biology

Sociobiology of Communication Patrizia d'Ettorre, David P. Hughes, 2008-08-21 Communication is essential for all forms of social interaction from parental care to mate choice to cooperation This book is a timely and novel synthesis It bridges many of the gaps between proximate and ultimate levels of analysis between empirical model systems and between biology and the humanities The book offers the complementary approaches of a distinguished group of authors spanning a large diversity of research programs addressing for example the genetic basis of bacterial communication dishonest communication in insect societies sexual selection and network communication among colonial vertebrates Other chapters explore the role of communication in genomic conflict and self organisation and how linguistics psychology and philosophy may ultimately contribute to a biological understanding of human mate choice and the evolution of human societies
