Raptors Keith L. Bildstein, 2017-05-02 Raptors are formally classified into five families and include birds such as eagles ospreys kites true hawks buzzards harriers vultures and falcons that are familiar and recognized by many observers These diurnal birds of prey

are found on every continent except Antarctica and can thrive in seemingly inhospitable spots such as deserts and the tundra. They have powerful talons and hooked beaks for cutting and tearing meat and keen binocular vision to aid in their hunting prowess. Because of their large size, distinctive feeding habits and long distance flight patterns, raptors intrigue humans and have been the subject of much general interest as well as extensive scientific research. Keith L. Bildstein has watched and studied raptors on five continents and is well prepared to explain their critical importance not only as ecological entities but also as inspirational tokens across natural and human dominated landscapes. His book offers a comprehensive and accessible account of raptors including their evolutionary history, their relationships to other groups of birds, their sensory abilities, their general natural history, their breeding ecology and feeding behavior and threats to their survival in a human dominated world. Biologically sound but readable, *Raptors* is a nontechnical overview of this captivating group. It will allow naturalists, birders, hawk watchers, science educators, schoolchildren and the general public along with new students in the field of raptor biology to understand and appreciate these birds and in so doing better protect them.

Birds of Prey José Hernán Sarasola, Juan Manuel Grande, Juan José Negro, 2018-06-30. This book will provide the state of the art on most of the topics involved in the ecology and conservation of birds of prey. With chapters authored by the most recognized and prestigious researchers on each of the fields, this book will become an authorized reference volume for raptor biologists and researchers around the world.

Flight Identification of Raptors of Europe, North Africa and the Middle East Dick Forsman, 2016-02-25. This book is the ultimate flight identification guide for the raptors of the Western Palearctic covering Europe, North Africa, the Middle East including Arabia to Central Asia. Raptors are notoriously hard to identify even if seen well and represent perhaps the toughest of all ID challenges for birders. This guide provides identification information for all 60 species that regularly occur in the region to subspecific level. The text covers every plumage and age in detail with each species account accompanied by a range of photographs covering all the principal plumages. Based on this stunning photographic coverage, most of which has never been published before, this book represents a landmark in bird identification books and a major work for all raptor enthusiasts.
