Livingston,2013-12-11 This volume records the proceedings of a Limbic System Symposium held at the University of Toronto November 5 6th 1976 as a satellite event to the Sixth Annual Meeting of the Society of Neuroscience The Symposium was designed in part as a tribute to James Papez on the 40th anniversary of the publication of his epochal paper A Proposed Mechanism of Emotion Papers by MacLean Yakovlev and Angevine provide personal recollections of Papez and an assessment of the significant contri bution he made to breaking down the still formidable barriers that separate our concepts of brain mind emotion and behavior Against this background subsequent speakers presented new information that further illuminates the anatomical physiological and biochemical mechanisms

underlying limbic system function Viewed in juxtaposition this new information from disparate fields of neuroscience provides an increasingly coherent picture of the neuronal organization subserving a dynamic limbic system that we can now begin to visualize in operational and transactional terms The final section of the symposium focusses on the recently identified kindling phenomenon which is viewed as a general model of neural plasticity and more particularly as a model of experimentally induced limbic system dysfunction Using this model it is possible to display analyse and experimentally manipulate long lasting changes in limbic system activity which develop over extended periods of time and are expressed in a variety of behavioral end points involving learning and memory seizure activity and changes in emotionality and behavior

**Cybercrime Through an Interdisciplinary Lens** Thomas Holt,2016-12-08 Research on cybercrime has been largely bifurcated with social science and computer science researchers working with different research agendas These fields have produced parallel scholarship to understand cybercrime offending and victimization as well as techniques to harden systems from compromise and understand the tools used by cybercriminals The literature developed from these two fields is diverse and informative but until now there has been minimal interdisciplinary scholarship combining their insights in order to create a more informed and robust body of knowledge This book offers an interdisciplinary approach to research on cybercrime and lays out frameworks for collaboration between the fields Bringing together international experts this book explores a range of issues from malicious software and hacking to victimization and fraud This work also provides direction for policy changes to both cybersecurity and criminal justice practice based on the enhanced understanding of cybercrime that can be derived from integrated research from both the technical and social sciences The authors demonstrate the breadth of contemporary scholarship as well as identifying key questions that could be addressed in the future or unique methods that could benefit the wider research community This edited collection will be key reading for academics researchers and practitioners in both computer security and law enforcement This book is also a comprehensive resource for postgraduate and advanced undergraduate students undertaking courses in social and technical studies
