Success in a Low-Return World Michael J. Oyster, 2018-11-19 Following the Great Financial Crisis the S P 500 advanced more than 17 percent annualized from February 2009 through June 2018 At this pace a buy and hold investor in the stock market would see their money double in 5 years and more than triple in 7 years This performance has lulled many investors into thinking that such above average returns will be with us into perpetuity Unfortunately this may not be the case Far more likely the return an investor may receive from the stock market will be slightly better than half the long term average about 5% to 7% Most investment portfolios hold a greater allocation to stocks than any other class of investment asset Massive amounts of wealth were created from the bull market since early 2009 providing institutions and individuals with a rising tide that lifted their portfolios above their goals without much effort The environment of the future stands to be far less accommodating so finding suitable investments other than U S stocks that can achieve the necessary returns or make up the shortfall will be a critical component of achieving goals in years to come This book will explore those solutions
