**Reviews of Plasma Physics / Voprosy Teorii Plazmy / Вопросы Теории Плазмы** M. A. Leontovich, 2013-12-21 In the interest of speed and economy the notation of the original text has been retained so that the cross product of two vectors  $\mathbf{A}$  and  $\mathbf{B}$  is denoted by  $\mathbf{AB}$  the dot product by  $\mathbf{AB}$  the Laplacian operator by  $\nabla^2$  etc It might also be worth pointing out that the temperature is frequently expressed in energy units in the Soviet literature so that the Boltzmann constant will be missing in various familiar expressions In matters of terminology whenever possible several forms are used when a term is first introduced e g magnetoacoustic and magnetosonic waves probkotron and mirror machine etc It is hoped in this way to help the reader to relate the terms used here with those in existing translations and with the conventional nomenclature In general the system of literature citation used in the bibliographies follows that of the American Institute of Physics Soviet Physics series Except for the correction of some obvious misprints the text is that of the original We wish to express our gratitude to Academician Leontovich for kindly providing the latest corrections and additions to the Russian text v

**Reviews of Plasma Physics** Vitaly

D Shafranov, 2003-09-30 Reviews of Plasma Physics Volume 22 contains two reviews The first Cooperative Effects in Plasmas by the late B B Kadomtsev is based on the second edition of the author's book in Russian which originated from his written lectures for students of the Moscow Institute of Physics and Technology Kadomtsev intended to publish the book in English and even initiated the translation himself The book represents a review of the typical plasma cooperative phenomena that determine the behavior of laboratory and astrophysical plasmas It is characterized by lively language The first three sections

of the review deal with linear and nonlinear phenomena in fluids without a magnetic field An additional subsection Solitons has been added to the third section The next two sections address regular nonlinear phenomena in a plasma in a magnetic field The second review by S V Bulanov et al is connected with the contents of the first The physics of the laser plasma interaction including such nonlinear processes as wave breaking the acceleration of charged particles electromagnetic wave self focusing the relativistic soliton and vortex generation are considered analytically and illustrated using computer simulations
