The underpinnings of restoration driven by ecological disturbance dispersal succession theory are described and applied to various activities restoring hydrology soils and biota that are used to improve the short and long term success of wetland restoration projects. Unforeseen problems that hinder restoration efforts and solutions to these problems are discussed in this comprehensive book that contains five sections and 13 chapters that include an introduction describing the defining characteristics of wetland hydrology soils biota the role of theory in guiding wetland succession ecosystem development following restoration and differentiating wetland reclamation restoration and creation restoration of various estuarine and freshwater wetlands case studies of estuarine and freshwater restoration and large scale restoration and finally the future of wetland restoration. Explicitly links ecological theory to restoration efforts in a variety of freshwater and estuarine natural agricultural urban landscapes and wetland ecosystems. Restoration of Temperate Wetlands Bryan D. Wheeler, 1995-06-08

Despite many wetland sites having suffered various forms of damage there has been a recent recognition that in some instances it may be possible to rectify this through deliberate and controlled restoration programmes Wetland restoration involves a variety of disciplines and interests concerning groups who are interested in wetland utilization such as farmers foresters peat extractors and water authorities as well as those who wish to safeguard the site or its wildlife such as conservationists natural historians ecologists and archaeologists Interaction between these action groups is regulated by planners and politicians and disagreements are frequently fuelled by an absence of reliable information In these circumstances wetland scientists have a responsibility to try to acquire and interpret relevant data in an informed objective

and impartial way This volume reviews the current scientific knowledge of wetland restoration identifying the problems and opportunities associated with it Based on revised and edited contributions to the recent Restoration of Temperate Wetlands symposium it provides a broad overview of current information and experience of wetland restoration In some cases it highlights the lack of knowledge available and illustrates how difficult it can be to make informed decisions With contributions from Scandinavia Europe Australia the USA and Canada outlining the latest research and observations from a range of international wetland scientists and practitioners this book provides a critical review of current information and knowledge and gives insights into many aspects of wetland restoration with a focused approach to the ecological principles that underpin it
