*Origins and Revolutions* Clive Gamble, 2007-03-26 In this study Clive Gamble presents and questions two of the most famous descriptions of change in prehistory The first is the human revolution when evidence for art music religion and language first appears The second is the economic and social revolution of the Neolithic period Gamble identifies the historical agendas behind origins research and presents a bold alternative to these established frameworks relating the study of change to the material basis of human identity He examines through artefact proxies how changing identities can be understood using embodied material metaphors and in two major case studies charts the prehistory of innovations asking did agriculture really change the social world This is an important and challenging book that will be essential reading for every student and scholar of prehistory

*Energy and the Wealth of Nations* Charles A. S. Hall,Kent A. Klitgaard,2011-10-27 For the past 150 years economics has been treated as a social science in which economies are modeled as a circular flow of income between producers and consumers In this perpetual motion of interactions between firms that produce and households that consume little or no accounting is given of the flow of energy and materials from the environment and back again In the standard economic model energy and matter are completely recycled in these transactions and economic activity is seemingly exempt from the Second Law of Thermodynamics As we enter the second half of the age of oil and as energy supplies and the environmental impacts of energy production and consumption become major issues on the world stage this exemption appears illusory at best In *Energy and the Wealth of Nations* concepts such as energy return on investment EROI provide powerful insights into the real balance sheets that drive our petroleum economy Hall and Klitgaard explore the relation between energy and the wealth explosion of the 20th century the failure of markets to recognize or efficiently allocate diminishing resources the economic consequences of peak oil the EROI for finding and exploiting new oil fields and whether alternative energy technologies such as wind and solar power meet the minimum EROI requirements needed to run our society as we know it This book is an essential read for all scientists and economists who have recognized the urgent need for a more scientific unified approach to economics in an energy constrained world and serves as an ideal teaching text for the growing number of courses such as the authors own on the role of energy in society     Value-Creating Education Emiliano Bosio,Maria Guajardo,2023-12-22

8.8 billion people by 2035. Also, changing climate conditions are negatively affecting the livelihoods of millions of people. In particular, environmental disasters are causing substantial damages to properties. From a social perspective, the inequalities between rich and poor nations are becoming even deeper, and in many countries, conflicts between national and international interest groups are intensifying. The above state of affairs suggests that a broader understanding of the trends which may lead to a more sustainable world is needed, especially those which may pave the way for future developments. In other words, we need to pave the way for sustainable futures. Consistent with this reality, the proposed Encyclopedia of Sustainability Futures aims to identify, document, and disseminate ideas, experiences, and visions from scientists, members of nongovernmental organisations, decision makers, industry representatives, and citizens on themes and issues which will be important in pursuing sustainable future scenarios. In particular, the publication will focus on scientific aspects as well as on social and economic ones, also considering matters related to financing and infrastructure which are important in pursuing a sustainable future. The Encyclopedia of Sustainability Futures will involve the contributing authors in line with the principle of co-generation from across a wide range of disciplines, e.g. education and social sciences, natural sciences, engineering, the arts, languages, etc., with papers adopting a long-term sustainability perspective with a time horizon until 2050. The focus will be on themes which are felt as important in the future, and the chapters are expected to interest and motivate a world audience. This book is part of the 100 papers to accelerate the implementation of the UN Sustainable Development Goals initiative.
