Searching For Life:

Searching for Life Rita Arditti, 1999-04-19 FROM THE BOOK I want to touch you and kiss you You are my mother's sister and only one year older you must have something of my mother in you A found child after being returned to her family Searching for Life traces the courageous plight of the Grandmothers of the Plaza de Mayo a group of women who challenged the ruthless dictatorship that ruled Argentina from 1976 to 1983 Acting as both detectives and human rights advocates in an effort to find and recover their grandchildren the Grandmothers identified fifty seven of an estimated 500 children who had been kidnapped or born in detention centers The Grandmothers work also led to the creation of the National Genetic Data Bank the only bank of its kind in the world and to Article 8 of the United Nations Convention on the Rights of the Child the right to identity that is now incorporated in the new adoption legislation in Argentina Rita Arditti has conducted extensive interviews with twenty Grandmothers and twenty five others connected with their work her book is a testament to the courage persistence and strength of these traditional older women The importance of the Grandmothers work has effectively transcended the Argentine situation Their tenacious pursuit of justice defies the culture of impunity and the historical amnesia that pervades Argentina and much of the rest of the world today In addition to reconciling the living disappeared with their families of origin these Grandmothers restored a chapter of history that too had been abducted and concealed from its rightful heirs Searching for Life Across Space and Time National Academies of Sciences, Engineering, and

Finding Meaning in Life, at Midlife and Beyond David Guttman, 2008-09-30 Having been mentored by Viktor E. Frankl the founder of logotherapy Emeritus Professor David Guttman authored this book so general readers may understand this approach to finding meaning in life at the point when most of us begin deeply wondering over that question at midlife and beyond Especially in this day and age of multiple demands on our time and seemingly non-stop obligations we too often find that it is only when the dust settles after a work day or work week or even after retirement when we begin to wonder What is the meaning of life The purpose This book is a new millennium venture into those questions and their answers using logotherapy written by a sage understudy who recalls Frankl with his logotherapy as the epitome of his theory even at 80 years old wise and witty exuding an energy enthusiasm and youthful spirit that belied his years by decades Aging does not diminish our power our energy and our quest for life but reshapes it with new understandings goals and needs But says Guttman we live in a technical and machine based world now in which there is a danger of losing our souls Here readers find a new creative perspective on aging and a fresh spiritual outlook This book will be of interest not only to general readers especially those at midlife and beyond but also to their families friends and students or professionals in the helping professions This unique work provides knowledge to find meaning in life derived from the fields of philosophy psychology religion and gerontology with case illustrations and vignettes to give readers both intellectual pleasure and practical guidance

Water and the Search for Life on Mars David M. Harland, 2007-09-24 Mars has long been believed to have been cold dead and dry for aeons but there is now striking new proof that not only was Mars a relatively warm and wet place in geologically recent times but that even today there are vast reserves of water frozen beneath the planet's surface As well as casting fascinating new insights into Mars past this discovery is also forcing a complete rethink about the mechanisms of global planetary change and the possibility that there is microbial life on Mars David Harland considers the issue of life on Mars in parallel with the origin of life on Earth At the time the Viking instruments were designed it was thought that all terrestrial life ultimately derived its energy from sunlight and that the earliest form of life was the cyanobacteria with chlorophyll for photosynthesis It was assumed the same would be the case on Mars and that microbial life would be on or near the surface that the Vikings had sampled In parallel with these NASA projects the European Space Agency developed the Mars Express remote sensing orbiter which has detected traces of methane that may have been released by microbes If microbial life is found on Mars will it be based on DNA Will this indicate that life developed independently Or that it has characteristics in common with the most ancient forms of terrestrial life If life is found on two planets in the same planetary system this would favour the panspermia hypothesis And if martian life is radically different then in light of the discovery of planetary systems around other stars this would as remarked by Philip Morrison of MIT transform life from the status of a miracle to that of a statistic These are all questions that the exploration of Mars for life are aimed to answer
