complements other volumes on related topics of feeding biology reproductive biology endocrine systems and behavioral ecology There is a rich history of the study of the neurobiology of crustaceans going back over 150 years This has included studies on how their nervous systems allow them to perform behaviors that are adapted to their particular environments as well as studying them as model organisms to understand basic biomedical principles about neural function such as sensory transduction and processing synaptic transmission and integration neuromodulation and learning and memory The volume has three sections that build progressively on each other The first section is on the basic organizational features of the crustacean nervous system and the principles upon which it is built The second section is on sensory ecology the organization of each sensory system and how it is used in intra and interspecific interactions within an ecological context The third section uses case studies of how crustacean nervous systems are organized to perform complex behaviors and interactions such as walking escape social interactions and memory and learning Taken together the 20 chapters synthesize our modern understanding of the neural control of behavior in crustaceans based on the most recent technologies in physiological recording molecular biology and computational science This volume will be useful to students and researchers as a concise summary of current knowledge of crustacean neuroscience

Conflict and Cohesion in Families Martha J. Cox, Jeanne Brooks-Gunn, 1998-12 Based on a summer institute of the Family Research Consortium this book presents theory and research from leading scholars working on issues of risk and resilience in families Focusing on the splits and bonds that shape children's development this volume's primary goal is to stimulate theoretical and empirical advances in research on family processes It will be valuable to developmental social and clinical psychologists sociologists and family studies specialists

Causal Learning Alison Gopnik, Laura Schulz, 2007-03-22 Understanding causal structure is a central task of human cognition Causal learning underpins the development of our concepts and categories our intuitive theories and our capacities for planning imagination and inference During the last few years there has been an interdisciplinary revolution in our understanding of learning and reasoning Researchers in philosophy psychology and computation have discovered new mechanisms for learning the causal structure of the world This new work provides a rigorous formal basis for theory theories of concepts and cognitive development and moreover the causal learning mechanisms it has uncovered go dramatically beyond the traditional mechanisms of both nativist theories such as modularity theories and empiricist ones such as association or connectionism

Integrative Organismal Biology Lynn B. Martin, Cameron K. Ghalambor, H. Arthur Woods, 2015-02-16 Integrative Organismal Biology synthesizes current understandings of the causes and consequences of individual variation at the

physiological behavioral and organismal levels Emphasizing key topics such as phenotypic plasticity and flexibility and summarizing emerging areas such as ecological immunology oxidative stress biology and others Integrative Organismal Biology pulls together information from diverse disciplines to provide a synthetic view of the role of the individual in evolution Beginning with the role of the individual in evolutionary and ecological processes the book covers theory and mechanism from both classic and modern perspectives Chapters explore concepts such as phenotypic plasticity genetic and epigenetic variation physiological and phenotypic variation homeostasis and gene and physiological regulatory networks A concluding section interweaves these concepts through a series of case studies of life processes such as aging reproduction and immune defense Written and edited by leaders in the field Integrative Organismal Biology will be an important advanced textbook for students and researchers across a variety of subdisciplines of integrative biology Current Catalog National Library of Medicine (U.S.), First multi year cumulation covers six years 1965 70 **Individuals as Producers of Their**

Development Richard M Lerner,Nancy A. Busch-Rossnagel,2013-09-03 Individuals as Producers of Their Development A Life Span Perspective provides an assessment of the usefulness of viewing the individual as an active contributor to his or her development It extends the breadth of organism environment reciprocities beyond those involved with the child and family On the one hand this extension involves a consideration of the role of evolutionary biological processes on the other it pertains to the broader ecology of human development the social network lying outside the family and the physical environmental contexts of development Person context reciprocities linked to variables that may play their greatest role in the extrafamilial context are also considered Variables such as physical attractiveness race and physical handicap are examples of those discussed in this regard Finally because of the greater scope of the analysis a potentially greater data base is examined in a search for documentation of the presence and role of dynamic person context interactions *Promoting Positive Youth Development* Edmond P.
