Pathogen And Microbial Contamination Management In Micropropagation:

Pathogen and Microbial Contamination Management in Micropropagation Alan C. Cassells, 2013-06-29 This book is based mainly on invited and offered papers presented at the Second International Symposium on Bacterial and Bacteria like Contaminants of Plant Tissue Cultures held at University College Cork Ireland in September 1996 with additional invited papers The First International Symposium on Bacterial and Bacteria like Contaminants of Plant Tissue Cultures was held at the same venue in 1987 and was published as Acta Horticulturae volume 225 1988 In the intervening years there have been considerable advances in both plant disease diagnostics and in the development of structured approaches to the management of disease and microbial contamination in micropropagation These approaches have centred on attempts to separate spatially the problems of disease transmission and laboratory contamination Disease control is best achieved by establishing pathogen free cultures while laboratory contamination is based on subsequent good working practice Control of losses due to pathogens and microbial contamination in vitro addresses arguably the most importance causes of losses in the industry nevertheless losses at and post establishment can also be considerable due to poor quality microplants or micro shoots In this symposium a holistic approach to pathogen and microbial contamination control is evident with the recognition that micropropagators must address pathogen and microbial contamination in vitro and diseases and microplant failure at establishment There is increasing interest in establishing beneficial bacterial and mycorrhizal association with microplants in vitro and in vivo

Micropropagation of Woody Trees and Fruits

S.M. Jain,K. Ishii,2012-12-06 Global warming environmental changes water shortage and sustainable development are the most up to date issues which have challenged mankind Researchers worldwide are engaged in addressing some of these problems including reduction in carbon dioxide accumulation and enrichment of perennial woody species on the terrestrial ecosystem About 12 million hectares of the world s forests disappear every year By 2025 the world population will reach 7.5 billion and the forest area will be reduced to well below 50 % of the current area Reforestation is an important to prevent the loss of forest resources including timber biodiversity and water resources Therefore subsequent volume of reforestation over the deforested land should be followed to safeguard the forests and maintain its size which will require a continuous supply of planting material Similarly fruit trees including tropical and subtropical fruit trees are consumed both as fresh and in the processed form including juices beverages and dried fruits They are an important source of nutrition e.g. rich in vitamins sugars aromas and flavour compounds and raw material for food processing industries The production cultivation and maintenance of tree species provide highly sustainable production systems that conserve soils microenvironment and biodiversity Fruit trees have longjuvenile periods and large tree size In many fruit trees e.g. avocado and others controlled crosses are difficult to make due to massive fruit drop

Microbial Endophytes Ajay Kumar,Vipin Kumar

Singh,2019-09-27 Microbial Endophytes Prospects for Sustainable Agriculture discusses the practical and theoretical aspects

regarding the use of endophytic microorganisms in agriculture providing insights on the biotechnological applications associated with long term crop production Chapters deal with the various aspects of endophytic microorganisms including isolation enumeration characterization procedures diversity analysis and their role as biofertilizer biocontrol agent and microbial inoculants Framed to discuss the present and future potential of microbial endophytes in biotic and abiotic stress management bioremediation bioactive compounds production and in nanotechnology this book provides a single volume resource that will be valuable to academics and researchers interested in microbiology agricultural sciences and biotechnology Explores aspects of sustainable agriculture by using endophytic microorganism such as bacteria fungi and actinobacteria Presents insights into the use of endophytes as biofertilizer and biocontrol agents in sustainable agriculture Relates endophyte organisms and nano technology *Microorganisms in Plant Conservation and Biodiversity* K.

Sivasithamparam,K.W. Dixon,R.L. Barrett,2007-05-08 Plant conservation is increasingly recognised as an outstanding global priority yet despite considerable efforts over the last few decades the number of threatened species continues to rise The practice of plant conservation has for too long been a rather hit or miss mixture of methods While microorganisms have been recognised as a crucial and essential element in supporting the lifecycles of plant species there has been limited recognition of the relationships between macro level conservation facilitating ecosystem functioning at the micro level This book addresses the role of microorganisms in conservation both their support functions and deleterious roles in ecosystem processes and species survival Importantly a number of authors highlight how microbial diversity is itself now under threat from the many and pervasive influences of man What is clear from this volume is that like many contemporary treatments of plant and animal conservation the solution to mitigate the erosion of biodiversity is not simple This book represents an attempt to bring to the fore the ecological underwriting provided by microorganisms *Plant Pathogenic Bacteria* Solke H. De Boer,2013-12-18 Plant Pathogenic Bacteria includes symposia and research papers presented at the 10th International Conference on Plant Pathogenic Bacteria The book provides the complete text of 22 symposia papers that summarize the state of the art of the many facets of phytobacteriology including disease control taxonomy genetics of pathogenicity virulence factors as well as detection and diagnosis These topics are also included among research papers presented orally or as posters at the conference and here presented in research paper format conveniently separated in different sections by subject matter This book will be an essential resource for scientists and students with an interest in plant pathogenic bacteria for it provides much new data and summarizes current thinking in almost all areas of the science Nowhere else can one find so much information on plant pathogenic bacteria in a single resource **Breeding For Ornamentals: Classical and Molecular Approaches** A. Vainstein,2013-04-17 In this book we bring together the most up to date information on developments both basic and applied that already have or are expected to impact the field of ornamental breeding These include classical and molecular techniques traditional and high throughput approaches and future trends Since not only

professional scientists but also thousands of future scientists students as well as amateur breeders around the world contribute heavily to the field of ornamental breeding an introductory section dealing with the basics of molecular and classical genetics and the evolution of floral diversity is included This should enable the reader to bridge the gap between traditional and molecular genetics Classical approaches to the creation selection of genetic variability including mutation and tissue culture aided breeding are presented Processes affecting ornamental and agronomic traits at the molecular level are delineated along with an in depth analysis of developments in the protection of intellectual property rights The thoughts and strategies of molecular and classical geneticists which are not always complementary or even compatible are presented side by side in this book and will serve to spark the imaginations of breeders as well as students entering the exciting world of state of the art ornamentals

Plant Tissue Culture Engineering S. Dutta Gupta, Yasuomi Ibaraki, 2006-07-10 It is my privilege to contribute the foreword for this unique volume entitled Plant Tissue Culture Engineering edited by S Dutta Gupta and Y Ibaraki While there have been a number of volumes published regarding the basic methods and applications of plant tissue and cell culture technologies and even considerable attention provided to bioreactor design relatively little attention has been afforded to the engineering principles that have emerged as critical contributions to the commercial applications of plant biotechnologies This volume Plant Tissue Culture Engineering signals a turning point the recognition that this specialized field of plant science must be integrated with engineering principles in order to develop efficient cost effective and large scale applications of these technologies I am most impressed with the organization of this volume and the extensive list of chapters contributed by expert authors from around the world who are leading the emergence of this interdisciplinary enterprise The editors are to be commended for their skilful crafting of this important volume The first two parts provide the basic information that is relevant to the field as a whole the following two parts elaborate on these principles and the last part elaborates on specific technologies or applications

Somatic Embryogenesis in Woody Plants S.M. Jain, Pramod P.K. Gupta, R.J. Newton, 2012-12-06 The quality of human life has been maintained and enhanced for generations by the use of trees and their products In recent years ever rising human population growth has put a tremendous pressure on trees and tree products growing awareness of the potential of previously unexploited tree resources and environmental pollution have both accelerated the development of new technologies for tree propagation breeding and improvement Biotechnology of trees may be the answer to solve the problems which can not be solved by conventional breeding methods The combination of biotechnology and conventional methods such as plant propagation and breeding could become a novel approach to improving and multiplying a large number of the trees and woody plants So far plant tissue culture technology has largely been exploited by commercial companies in propagation of ornamentals especially foliage house plants Generally tissue culture of woody plants has been recalcitrant However limited success has been achieved in tissue culture of angiosperm and gymnosperm woody plants A number of recent reports on somatic embryogenesis in woody plants such as Norway spruce

Picea abies Loblolly pine Pinus taeda Sandalwood Santalum album Citrus and mango Mangifera indica offer a ray of hope for inexpensive clonal propagation for large scale production of plants or emblings or somatic seedlings protoplast work cryopreservation genetic transformation and synthetic or artificial or manufactured seed production
