Modeling in Systems Biology Ina Koch, Wolfgang Reisig, Falk Schreiber, 2010-10-21 The emerging multi disciplinary field of systems biology is devoted to the study of the relationships between various parts of a biological system and computer modeling plays a vital role in the drive to understand the processes of life from an holistic viewpoint Advancements in experimental technologies in biology and medicine have generated an enormous amount of biological data on the dependencies and interactions of many different molecular cell processes fueling the development of numerous computational methods for exploring this data The mathematical formalism of Petri net theory is able to encompass many of these techniques This essential text reference presents a comprehensive overview of cutting edge research in applications of Petri nets in systems biology with contributions from an international selection of experts Those unfamiliar with the field are also provided with a general introduction to systems biology the foundations of biochemistry and the basics of Petri net theory Further chapters address Petri net modeling techniques for building and analyzing biological models as well as network prediction approaches before reviewing the applications to networks of different biological classification Topics and features investigates the modular qualitative modeling of regulatory networks using Petri nets and examines an Hybrid Functional Petri net simulation case study contains a glossary of the concepts and notation used in the book in addition to exercises at the end of each chapter

covers the topological analysis of metabolic and regulatory networks the analysis of models of signaling networks and the prediction of network structure provides a biological case study on the conversion of logical networks into Petri nets discusses discrete modeling stochastic modeling fuzzy modeling dynamic pathway modeling genetic regulatory network modeling and quantitative analysis techniques includes a Foreword by Professor Jens Reich Professor of Bioinformatics at Humboldt University and Max Delbrück Center for Molecular Medicine in Berlin This unique guide to the modeling of biochemical systems using Petri net concepts will be of real utility to researchers and students of computational biology systems biology bioinformatics computer science and biochemistry

Systems Biology for Signaling Networks Sangdun Choi, 2010-08-09 System Biology encompasses the knowledge from diverse fields such as Molecular Biology Immunology Genetics Computational Biology Mathematical Biology etc not only to address key questions that are not answerable by individual fields alone but also to help in our understanding of the complexities of biological systems Whole genome expression studies have provided us the means of studying the expression

of thousands of genes under a particular condition and this technique had been widely used to find out the role of key macromolecules that are involved in biological signaling pathways. However, making sense of the underlying complexity is only possible if we interconnect various signaling pathways into human and computer readable network maps. These maps can then be used to classify and study individual components involved in a particular phenomenon. Apart from transcriptomics, several individual gene studies have resulted in adding to our knowledge of key components that are involved in a signaling pathway. It therefore becomes imperative to take into account of these studies also while constructing our network maps to highlight the interconnectedness of the entire signaling pathways and the role of that particular individual protein in the pathway. This collection of articles will contain a collection of pioneering work done by scientists working in regulatory signaling networks and the use of large scale gene expression and omics data. The distinctive features of this book would be:

- Act as a single source of information to understand the various components of different signaling network
- Roadmap of biochemical pathways
- The nature of a molecule of interest in a particular pathway etc.

Serve as a platform to highlight the key findings in this highly volatile and evolving field and Provide answers to various techniques both related to microarray and cell signaling to the readers.
