Pattern Recognition Theory Experiment Co:

Pattern Recognition Theory and Applications J. Kittler, V.W. Fu, L.F. Pau, 2012-12-06 This book is the outcome of the successful NATO Advanced Study Institute on Pattern Recognition Theory and Applications held at St Anne's College Oxford in April 1981. The aim of the meeting was to review the recent advances in the theory of pattern recognition and to assess its current and future practical potential. The theme of the Institute, the decision making aspects of pattern recognition with the emphasis on the novel hybrid approaches and its scope, a high level tutorial coverage of pattern recognition methodologies counterpointed with contributed papers on advanced theoretical topics and applications are faithfully reflected by the volume. The material is divided into five sections: 1 Methodology 2 Image Understanding and Interpretation 3 Medical Applications 4 Speech Processing and Other Applications 5 Panel Discussions. The first section covers a broad spectrum of pattern recognition methodologies including geometric statistical fuzzy set syntactic graph theoretic and hybrid approaches. Its coverage of hybrid methods places the volume in a unique position among existing books on pattern recognition. The second section provides an extensive treatment of the topical problem of image understanding from both the artificial intelligence and pattern recognition points of view. The two application sections demonstrate the usefulness of the novel methodologies in traditional pattern recognition application areas. They address the problems of hardware software implementation and of algorithm robustness flexibility and general reliability. The final section reports on a panel discussion held during the Institute.

Syntactic Methods in Pattern Recognition, 1974-11-15 In this book we study theoretical and practical aspects of computing methods for mathematical modelling of nonlinear systems. A number of computing techniques are considered such as methods of operator approximation with any given accuracy operator interpolation techniques including a non Lagrange interpolation methods of system representation subject to constraints associated with concepts of causality memory and stationarity methods of system representation with an accuracy that is the best within a given class of models methods of covariance matrix estimation methods for low rank matrix approximations hybrid methods based on a combination of iterative procedures and best operator approximation and methods for information compression and filtering under condition that a filter model should satisfy restrictions associated with causality and different types of memory. As a result the book represents a blend of new methods in general computational analysis and specific but also generic techniques for study of systems theory and its particular branches such as optimal filtering and information compression. Best operator approximation Non Lagrange interpolation Generic Karhunen Loeve transform Generalised low rank matrix approximation Optimal data compression Optimal nonlinear filtering.
