Patterns In The Landscape:

Patterns in the Landscape Philip Hughes, 1998 Over a decade has passed since Philip Hughes first chanced upon a notebook whose shape and rough recycled paper provided him with new inspiration for his drawing and painting I was captivated by the rough texture of the paper by the book's shape indeed by the whole idea of working in a notebook something I had never done before Many striking images of the beautiful landscapes he has encountered on his travels from the South Downs in Sussex and the Lubron in the south of France to Bungle Bungle and Cabbage Tree Creek in Australia are included here Philip Hughes has regular one man shows in London and France and has been the subject of retrospectives in Scotland and Paris He is Chairman of the Trustees of the National Gallery London and was appointed CBE in 1982

Patterns and Processes in Forest Landscapes Raffaele Laforazza, Jiquan Chen, Giovanni Sanesi, Thomas R. Crow, 2008-08-30 Increasing evidence suggests that the composition and spatial configuration the pattern of forest landscapes affect many ecological processes including the movement and persistence of particular species the susceptibility and spread of disturbances such as fires or pest outbreaks and the redistribution of matter and nutrients Understanding these issues is key to the successful management of complex multifunctional forest landscapes and landscape ecology based on a foundation of island biogeography and meta population dynamic theories provides the rationale to deal with this pattern to process interaction at different spatial and temporal scales This carefully edited volume represents a stimulating addition to the international literature on landscape ecology and resource management It provides key insights into some of the applicable landscape ecological theories that underlie forest management with a specific focus on how forest management can benefit from landscape ecology and how landscape ecology can be advanced by tackling challenging problems in forest landscape management It also presents a series of case studies from Europe Asia North America Africa and Australia exploring the issues of disturbance diversity management and scale and with a specific focus on how human intervention affects forest landscapes and in turn how landscapes influence humans and their culture An important reference for advanced students and researchers in landscape ecology conservation biology forest ecology natural resource management and ecology across multiple scales the book will also appeal to researchers and practitioners in reserve design ecological restoration forest management landscape planning and landscape architecture

Turner, Robert H.

Gardner, Robert V. O'Neill, 2007-05-08 An ideal text for students taking a course in landscape ecology The book has been written by very well known practitioners and pioneers in the new field of ecological analysis Landscape ecology has emerged during the past two decades as a new and exciting level of ecological study Environmental problems such as global climate change land use change habitat fragmentation and loss of biodiversity have required ecologists to expand their traditional spatial and temporal scales and the widespread availability of remote imagery geographic information systems and desk top computing has permitted the development of spatially explicit analyses In this new text book this new field of landscape ecology is given the first fully integrated treatment suitable for the student Throughout the theoretical developments modeling approaches and results and empirical data are merged together so as not to introduce barriers to the synthesis of the various approaches that constitute an effective ecological synthesis The book also emphasizes selected topic areas in which landscape ecology has made the most contributions to our understanding of ecological processes as well as identifying areas where its contributions have been limited Each chapter features questions for discussion as well as recommended reading *Foundation Papers in Landscape Ecology* John A. Wiens, 2007 The editors begin with articles that illuminate the discipline's diverse scientific foundations such as L

Dynamic Patterns Karen M'Closkey, Keith VanDerSys, 2017-03-27 *Dynamic Patterns* explores the role of patterns in designed landscapes Patterns are inherently relational and the search for and the creation of patterns are endemic to many scientific and artistic endeavors Recent advances in optical tools sensors and computing have expanded our understanding of patterns as a link between natural and cultural realms Looking beyond

the surface manifestation of pattern M Closkey and VanDerSys delve into a multifaceted examination that explores new avenues for engagement with patterns using digital media Examining the theoretical implications of pattern making they probe the potential of patterns to conjoin landscape s utilitarian and aesthetic functions With full color throughout and over one hundred and twenty images Dynamic Patterns utilizes work from a wide range of artists and designers to demonstrate how novel modes of visualization have facilitated new ways of seeing patterns and therefore of understanding and designing landscapes Landscape Pattern Analysis for Assessing Ecosystem Condition Glen D. Johnson,Ganapati P. Patil,2007-01-11

This book presents a new method for assessing spatial pattern in raster land cover maps based on satellite imagery in a way that incorporates multiple pixel resolutions This is combined with more conventional single resolution measurements of spatial pattern and simple non spatial land cover proportions to assess predictability of both surface water quality and ecological integrity within watersheds of the state of Pennsylvania USA **Agents and Implications of Landscape**

Pattern Dean L Urban,2023-10-11 This is an ecology textbook focused on key principles that underpin research and management at the landscape scale It covers 1 agents of pattern the physical template biotic processes and disturbance regimes 2 scale and pattern why scale matters how to scale with data and inferences using landscape pattern metrics and 3 implications of pattern for metapopulations communities and biodiversity and ecosystem processes The last two chapters address emerging issues urban landscapes and adapting to climate change This book stems from two graduate level courses in Landscape Ecology taught at the Nicholas School of the Environment at Duke University The subject has evolved over time from a concepts based overview of what landscape ecology is to a more applied practicum on how one does landscape ecology As landscape ecology has matured as a discipline its perspectives on spatial heterogeneity and scale have begun to permeate into a wide range of other fields including conservation biology ecosystem management and ecological restoration Thus this textbook will bring students from diverse backgrounds to a common level of understanding and will prepare them with the practical knowledge for a career in conservation and ecosystem management **Handbook of Landscape**
