Merrill's Atlas of Radiographic Positioning and Procedures E-Book Bruce W. Long, Jeannean Hall Rollins, Barbara J. Smith, 2018-11-25 With more than 400 projections, Merrill's Atlas of Radiographic Positioning and Procedures, 14th Edition, makes it easier for you to learn anatomy properly, position the patient, set exposures, and take high-quality radiographs. This definitive text has been reorganized to align with the ASRT curriculum, helping you develop the skills to produce clear radiographic images. It separates anatomy and positioning information by bone groups or organ systems, using full-color illustrations to show anatomical anatomy and CT scans and MRI images to help in learning cross-section anatomy. Merrill's Atlas is not just the gold standard in radiographic positioning texts and the most widely used, but also an excellent review in preparing for ARRT and certification exams. Comprehensive full-color coverage of anatomy and positioning makes Merrill's Atlas the most in-depth text and reference available for radiography students and practitioners. Frequently performed essential projections are identified with a special icon to help you focus on what you need to know as an entry-level radiographer. Summary of Pathology table now includes common male reproductive system pathologies. Coverage of common and unique positioning procedures includes special chapters on trauma, surgical radiography, geriatrics, pediatrics, and bone densitometry to help prepare you for the full scope of situations you will encounter. Collimation sizes and other key information are provided for each relevant projection. Numerous CT and MRI images enhance comprehension of cross-sectional anatomy and help in preparing for the Registry examination. UPDATED Positioning photos show current digital imaging equipment and technology. Summary tables provide quick access to projection overviews, guides to anatomy, pathology tables for bone groups and body systems, and exposure technique charts. Bulleted lists provide clear instructions on how to correctly position the patient and body part when performing procedures.
