Possibility Of An Early Fall:

Boot and Shoe Recorder, 1922 **Assessments and Risk Factors for Falls in Persons with Acute Stroke** Hanna Sjöholm, 2021-02-22 Background Early identification of risk factors is crucial for reducing the high fall risk associated with stroke and sex differences in relation to falls need to be further investigated There is a lack of uniform standardized and reliable testing procedures for postural reactions and existing tests assessing negotiating obstacles while walking cannot be performed when walking aids are used Aim To investigate the predictive validity of fall risk in persons with acute stroke for easily administered data and assessments as well as to investigate the psychometric properties of two new tests Methods The Postural Reactions Test PRT and the Cone Evasion Walk Test CEW were developed based on literature and on input from an expert panel To estimate the reliability of the PRT and CEW video recordings of 20 persons with acute stroke performing each item in the PRT and CEW were assessed by 10 physiotherapists on two occasions at least two weeks apart The construct validity of the CEW n 221 was examined in relation to selected corresponding tests and predictive validity by correlating the CEW to falls within six months In 124 women and 160 men the results from the PRT and CEW along with other easily administered data and assessments on participant characteristics functions and activities were analyzed in relation to the number of days to the first fall by Cox regression while fall incidence was analyzed by negative binomial regression both for the total cohort and for women and men separately Sex differences in monthly fall incidence were analyzed with Poisson regression Results For the intra rater reliability of the PRT the overall proportion of agreement was 87 92% for the different postural reactions and in median 9 10 out of 10 physiotherapists scored the same value for inter rater reliability In the CEW the intra class correlation coefficients for intra rater and inter rater reliability were 0 88 0 98 The results showed expected poor to moderate correlations to the selected tests for construct validity and to falls within six months Participants touched significantly more cones on the side that was opposite to the side of their lesion The Cox regression analysis showed that intake of more than eight medications paresis in the arms paresis in the legs impaired protective reactions in sitting and limitations in self care activities were decisive risk factors for the time to the first fall and according to the negative binomial regression limitations in mobility activities was a decisive risk factor for high fall incidence in the total cohort p Hearings United States. Argument Writing as a Supplemental Literacy Intervention for At-Risk Youth Margaret Sheehy, Donna M. Scanlon, 2021-11-28 This volume details the development and initial evaluation of a supplemental literacy course intended to support at risk high school students in the US Developed using design based research DBR the course combines argument writing and knowledge building literacy routines to support academic literacy development Acknowledging the demand for US students to meet academic literacy standards that emphasize explanatory and argumentative writing the text foregrounds knowledge building as key to effective writing development Chapters trace the development and implementation of course literacy routines designed using DBR and use whole class and individual case studies to demonstrate how informational reading discussion and argument writing become an activity system to support literacy development Ultimately the text has important implications for literacy course design and the use of knowledge building analysis and DBR in research The text will benefit researchers academics and educators in higher education with an interest in academic literacy education writing and composition and secondary education more broadly Those specifically interested in methodologies relating to classroom teaching and learning as well as argumentation and argument writing will also benefit from this book **Falls and Cognition in Older Persons** Manuel Montero-Odasso, Richard Camicioli, 2019-10-04 Despite of the enormous efforts of researchers and clinicians to understand the pathophysiology of falls in older adults and establish preventive treatments there is still a significant gap in our understanding and treating of this challenging syndrome particularly when we focus in cognitively impaired older adults Falls in older adults are a very common yet complex medical event being the fifth leading cause of death and a main cause of insidious disability and nursing home placement in our world aging population Importantly falls in the cognitively impaired double the prevalence of the cognitively normal affecting up of 60% of older adults with low cognition and increasing the risk of injuries The past decade has witnessed an explosion of new knowledge in the role of cognitive processes into the falls mechanisms This was also accompanied with clinical trials assessing the effect of improving cognition via pharmacological and non pharmacologic approaches to prevent falls and related injuries Unfortunately this revolution in emerging interventions left a gap between clinician scientists and researchers at academic centers where the new data had been generated and the practitioners who care for cognitively impaired patients with falls Most advances are published in specialty journals of geriatric medicine neurology and rehabilitation The aim of this book is to reduce this gap and to provide practical tools for fall prevention in cognitively impaired populations The proposed book is

designed to present a comprehensive and state of the art update that covers the pathophysiology epidemiology and clinical presentation of falls in cognitively impaired older adults We additionally aim to reduce the knowledge gap in the association between cognitive processes and falls for practitioners from a translational perspective from research evidence to clinical approach We will address gaps and areas of uncertainty but also we will provide practical evidence based guidelines for the assessment approach and treatment of falls in the cognitively impaired populations This book is a unique contribution to the field Existing textbooks on fall prevention focus in global approaches and only tangentially address the cognitive component of falls and not purposely address special populations and or settings as residential care and nursing homes Due to the expected increase of proportion of older adults with cognitive and mobility impairments this book is also valuable for the whole spectrum of the health care of the elderly By including a transdisciplinary perspective from geriatric medicine rehabilitation and physiotherapy medicine cognitive neurology and public health this book will provide a practical and useful resource with wide applicability in falls assessment and prevention

Research Paper - Intermountain Forest and Range Experiment Station Intermountain Forest and Range Experiment Station (Ogden, Utah),1955 Late Godard and the Possibilities of Cinema Daniel Morgan,2013

Late Godard and the Possibilities of Cinema is an exhilarating and extremely lucid analysis of the way Godard thinks in of and through cinema Drawing on his extensive knowledge of French culture politics and theory Morgan skillfully illustrates the complex relations between history aesthetics and nature in the director s later works Defying criticism of Godard s alleged retreat from politics this book provides compelling detailed and erudite analyses of his later films and illuminates the auteur s political and aesthetic response to the so called death of cinema Mary Ann Doane author of *The Emergence of Cinematic*

Time Modernity Contingency the Archive Daniel Morgan charts a sensible route into the impenetrable Jean Luc Godard Posing clear yet insistent questions he burrows to the center of both parts of this book's formidable title finding in late Godard an aesthetic fusion that generates the light and heat of a trenchant and powerful political critique Anyone who feels drawn or licensed to write about Godard should read Morgan before setting out Dudley Andrew author of *What Cinema Is* Daniel Morgan's *Late Godard and the Possibilities of Cinema* signals a major breakthrough in the international study of the cinema of Jean Luc Godard Reconciling the filmmaker's peculiarly Romantic sense of aesthetics to which the book pays scrupulous material attention with the thorny political histories that Godard's cinema has always probed Morgan gives us new compelling synthetic tools with which to understand an artist who is at once the most cryptic and the most sensuous of all living filmmakers Adrian Martin Monash University co editor of lolajournal.com
