Kader,Michael S. Reid,Cai-Zhong Jiang,Marita I. Cantwell,2025-01-24 Fresh fruit vegetables and ornamentals are composed of living tissues that experience continuous change after harvest Some of these changes are desirable e g development of sugars and improved texture during fruit ripening while others are not e g discoloration and loss of nutrients in fresh cut vegetables Senescence is the final stage in the development of plant organs culminating in a series of irreversible events leading to cellular breakdown and death These postharvest changes cannot be stopped but they can be managed to maintain optimal quality longer Maintaining recommended temperature and relative humidity while minimizing wounding and microbial contamination constitute the foundation of effective postharvest handling The first chapter of this volume describes biological factors affecting these crops including respiration rates of ethylene production water loss physical damage and damage due to pathogens environmental factors such as temperature humidity ethylene and sunlight Subsequent chapters explore the use of biotechnology to improve postharvest results and postharvest handling operations for ornamentals and cut flowers for fresh herbs for fruit vegetables e g cucurbits tomatoes for leafy and stem vegetables and for underground vegetables roots tubers bulbs Handy easy to use tables and charts along with color photographs illustrate important points throughout A comprehensive table summarizes storage recommendations for produce a second table summarizes storage recommendations for cut flowers and greens This is Volume 7 in Postharvest Technology of Horticultural Crops 4th Edition

Mitcham, Carlos H. Crisosto, James F. Thompson, Marita I. Cantwell, Devon Zagor, James R. Gorny, 2024-04-12 The fourth edition of Postharvest Technology for Horticultural Crops has been converted into a series of ten books each covering a separate area of postharvest technology This book 1 in the series covers the basics of preharvest factors that can affect the quality of the produce headed to the packinghouse and sets the foundation for the rest of the series Also covered in depth are hand and mechanical harvesting methods as well as preparation for the packinghouse from the field through the sorting line There is extensive information about food safety during this process as well as worker safety both in the field and at the plant The book concludes with information about a variety of packaging methods **Postharvest Technology of Horticultural Crops** Satish Sharma, Mohan Chandra Nautiyal, 2009 The contents of s have been put up in the simplest language giving separate instructions for the students and teacher as well as relevant information on the topics so that conduct of practical becomes easy and systematic *Postharvest Technology of Fruits and Vegetables: General concepts and principles* L. R. Verma, V. K. Joshi, 2000 This book covers various method of extending the postharvest life of fruits and vegetables viz storage packaging canning chemical low temperatures preservation irradiation fermentation waste management *Postharvest Technology of Horticultural Crops : Fresh-Cut and Processed Horticultural Products* Marita I. Cantwell, Diane M. Barrett, 2023-12-21 Fresh cut products are estimated to account for about 18 to 20 percent of the value of fresh fruit and vegetables marketed through retail and food service channels in the United States From salad mixes to baby carrots broccoli and cauliflower florets to slaw mixes these products continue to grow in popularity with consumers For the consumer fresh cut fruit and vegetables offer several potential benefits They can reduce meal preparation time provide more uniform quality and increase access to healthy produce For the processor successful fresh cut products can actually be more cost effective because of reduced waste for the end user Concerns about fresh cut products include their variable shelf life the need for temperature control microbial food safety and inconsistent overall product quality including flavor and nutrition Whereas most food processing techniques stabilize products and lengthen their storage and shelf life fresh cut processing increases the perishability of fruit and vegetables This volume addresses the physiology of fresh cut fruits and vegetables treatments for maintaining quality optimal storage temperatures and modified atmospheres The chapter on processed products covers the principles of horticultural crop preservation the importance of raw material quality and common unit operations and technologies used for processing horticultural crops The advantages and disadvantages of various technologies are

addressed followed by general information on packaging and quality control
