Potato How The Humble Spud Rescued The Western World:

The Potato Larry Zuckerman,1998 The Potato tells the story of how a humble vegetable once regarded as trash food had as revolutionary an impact on Western history as the railroad or the automobile Using Ireland England France and the United States as examples Larry Zuckerman shows how daily life from the 1770s until World War I would have been unrecognizable perhaps impossible without the potato which functioned as fast food famine insurance fuel and labor saver budget stretcher and bank loan as well as delicacy Drawing on personal diaries contemporaneous newspaper accounts and other primary sources this is popular social history at its liveliest and most illuminating **The Beneficiary** Bruce

Robbins,2017-11-16 From iPhones and clothing to jewelry and food the products those of us in the developed world consume and enjoy exist only through the labor and suffering of countless others In his new book Bruce Robbins examines the implications of this dynamic for humanitarianism and social justice He locates the figure of the beneficiary in the history of humanitarian thought which asks the prosperous to help the poor without requiring them to recognize their causal role in the creation of the abhorrent conditions they seek to remedy Tracing how the beneficiary has manifested itself in the work of George Orwell Virginia Woolf Jamaica Kincaid Naomi Klein and others Robbins uncovers a hidden tradition of economic cosmopolitanism There are no easy answers to the question of how to confront systematic inequality on a global scale But the first step Robbins suggests is to acknowledge that we are in fact beneficiaries Local Foods Meet Global Foodways

Benjamin Lawrance,Carolyn de la Peña,2013-09-13 This book explores the intersection of food and foodways from global and local perspectives The collection contributes to interdisciplinary debates about the role and movement of commodities in the historical and contemporary world The expert contributions collectively address a fundamental tension in the emerging scholarly terrain of food studies namely theorizing the relationship between foodstuff production and cuisine patterns They explore a wide variety of topics including curry bread sugar coffee milk pulque Virginia ham fast food obesity and US ethnic restaurants Local Foods Meet Global Foodways considers movements in context and in doing so complicates the notions that food shapes culture as it crosses borders or that culture adapts foods to its neo local or global contexts By analysing the dynamics of contact between mobile foods and or people and the specific cultures of consumption they provoke these case studies reveal the process whereby local foods become global or global foods become local to be a dynamic co creative development jointly facilitated by humans and nature This volume explores a vast expanse of global regions such as North and Central America Europe China East Asia and the Pacific India sub Saharan Africa the Atlantic Ocean and the USSR Russia It includes a foreword by the eminent food scholar Carole Counihan and an afterword by noted theorist of cuisine Rachel Laudan and will be of great interest to students and researchers of history anthropology geography cultural studies and American studies This book is based on a special issue of Food and Foodways *Fueling the Gilded Age* Andrew B. Arnold,2014-04-11 If the railroads won the Gilded Age the coal industry lost it Railroads epitomized modern management

high technology and vast economies of scale By comparison the coal industry was embarrassingly primitive Miners and operators dug coal bought it and sold it in 1900 in the same ways that they had for generations In the popular imagination coal miners epitomized anti modern forces as the so called Molly Maguire terrorists Yet the sleekly modern railroads were utterly dependent upon the disorderly coal industry Railroad managers demanded that coal operators and miners accept the purely subordinate role implied by their status They refused Fueling the Gilded Age shows how disorder in the coal industry disrupted the strategic plans of the railroads It does so by expertly intertwining the history of two industries railroads and coal mining that historians have generally examined from separate vantage points It shows the surprising connections between railroad management and miner organizing railroad freight rate structure and coal mine operations railroad strategy and strictly local legal precedents It combines social economic and institutional approaches to explain the Gilded Age from the perspective of the relative losers of history rather than the winners It beckons readers to examine the still unresolved nature of America s national conundrum how to reconcile the competing demands of national corporations local businesses and employees

People, Plants and Genes Denis J Murphy,2007-07-19 This book provides a comprehensive interdisciplinary overview of human plant interactions and their social consequences from the hunter gatherers of the Palaeolithic Era to the 21st century molecular manipulation of crops It links the latest advances in molecular genetics climate research and archaeology to give a new perspective on the evolution of agriculture and complex human societies across the world Even today our technologically

advanced societies still rely on plants for basic food needs not to mention clothing shelter medicines and tools This special relationship has tied together people and their chosen plants in mutual dependence for well over 50 000 years Yet despite these millennia of intimate contact people have only domesticated and cultivated a few dozen of the tens of thousands of potentially available edible plants This limited domestication process led directly to the evolution of the complex urban based societies that have dominated much of human development over the past ten millennia Thanks to the latest genomic studies we can now begin to explain how when and where some of the most important crops came to be domesticated and the crucial roles of plant genetics climatic change and social organisation in these processes Indeed it was their unique genetic organisations that ultimately determined which plants eventually became crops rather than any conscious decisions by their human cultivators The book is aimed at a wide audience ranging from plant specialists such as geneticists molecular biologists and agronomists to a more general readership of archaeologists anthropologists historians and others who wish to explore the complex processes that have shaped the often crucial relationships between plants and human societies over the past hundred millennia

Food: A Very Short Introduction John Krebs, 2013-09-26 In this Very Short Introduction Prof Lord John Krebs provides a brief history of human food from our remote ancestors 3 million years ago to the present day By looking at the four great transitions in human food cooking agriculture processing and preservation he considers a variety of questions including why people like some kinds of foods and not others how your senses contribute to flavour the role of genetics in our likes and dislikes and the differences in learning and culture around the world In turn he considers aspects of diet nutrition and health and the disparity between malnutrition in some places and overconsumption in others Finally he considers some of the big issues the obesity crisis sustainable agriculture the role of new technologies such as genetic modification of crops and ends by posing the question how will it be possible to feed a population of 9 billion in 2050 without destroying our natural environment

On Savage Shores Caroline Dodds Pennock, 2024-10-15 AN ECONOMIST AND SMITHSONIAN BEST BOOK OF THE YEAR A landmark work of narrative history that shatters our previous Eurocentric understanding of the Age of Discovery by telling the story of the Indigenous Americans who journeyed across the Atlantic to Europe after 1492 We have long been taught to presume that modern global history began when the Old World encountered the New when Christopher Columbus discovered America in 1492 But as Caroline Dodds Pennock conclusively shows in this groundbreaking book for tens of thousands of Aztecs Maya Totonacs Inuit and others enslaved people diplomats explorers servants traders the reverse was true they discovered Europe For them Europe comprised savage shores a land of riches and marvels yet perplexing for its brutal disparities of wealth and quality of life and its baffling beliefs The story of these

Indigenous Americans abroad is a story of abduction loss cultural appropriation and as they saw it of apocalypse a story that has largely been absent from our collective imagination of the times From the Brazilian king who met Henry VIII to the Aztecs who mocked up human sacrifice at the court of Charles V from the Inuk baby who was put on show in a London pub to the mestizo children of Spaniards who returned home with their fathers from the Inuit who harpooned ducks on the Avon river to the many servants employed by Europeans of every rank here are a people who were rendered exotic demeaned and marginalized but whose worldviews and cultures had a profound impact on European civilization Drawing on their surviving literature and poetry and subtly layering European eyewitness accounts against the grain Pennock gives us a sweeping account of the Indigenous American presence in and impact on early modern Europe **The Triumph of the Fungi**

Nicholas P. Money,2007 Everyone is aware of the nineteenth century Irish potato famine but fungal diseases of many other crops have had similarly apocalyptic consequences Today coffee cacao and rubber are threatened by fungi throughout the tropics Indeed fungi have carved their way through the ages attacking every plant that we cultivate constantly exploiting new hosts In The Triumph of the Fungi Nicholas Money offers an intimate picture of these pernicious microbes the scientists who have sought to control them and the people directly impacted by the loss of forest trees and cash crops Even with the development of fungicides and other scientific breakthroughs fungi continue to be unstoppable this is the story of their triumph BOOK JACKET The Pecan James McWilliams,2013-10-01 This excellent and charming story describes a tree that endured numerous hardships to become not only a staple of Southern cuisine but an American treasure Library Journal What would Thanksgiving be without pecan pie New Orleans without pecan pralines But as familiar as the pecan is most people don't know the fascinating story of how native pecan trees fed Americans for thousands of years until the nut was improved a little more than a century ago and why that rapid domestication actually threatens the pecan's long term future In The Pecan the acclaimed author of Just Food and A Revolution in Eating explores the history of America's most important commercial nut He describes how essential the pecan was for Native Americans by some calculations an average pecan harvest had the food value of nearly 150 000 bison McWilliams explains that because of its natural edibility abundance and ease of harvesting the pecan was left in its natural state longer than any other commercial fruit or nut crop in America Yet once the process of improvement began it took less than a century for the pecan to be almost totally domesticated Today more than 300 million pounds of pecans are produced every year in the United States and as much as half of that total might be exported to China which has fallen in love with America's native nut McWilliams also warns that as ubiquitous as the pecan has become it is vulnerable to a perfect storm of economic threats and ecological disasters that could wipe it out within a generation This lively history suggests why the pecan deserves to be recognized as a true American heirloom **Mendel in the Kitchen**

Nancy Marie Brown,Nina V. Fedoroff,2004-09-30 While European restaurants race to footnote menus reassuring concerned gourmands that no genetically modified ingredients were used in the preparation of their food starving populations around

the world eagerly await the next harvest of scientifically improved crops Mendel in the Kitchen provides a clear and balanced picture of this tangled tricky and very timely topic Any farmer you talk to could tell you that we've been playing with the genetic makeup of our food for millennia carefully coaxing nature to do our bidding The practice officially dates back to Gregor Mendel who was not a renowned scientist but a 19th century Augustinian monk Mendel spent many hours toiling in his garden testing and cultivating more than 28 000 pea plants selectively determining very specific characteristics of the peas that were produced ultimately giving birth to the idea of heredity and the now very common practice of artificially modifying our food But as science takes the helm steering common field practices into the laboratory the world is now keenly aware of how adept we have become at tinkering with nature which in turn has produced a variety of questions Are genetically modified foods really safe Will the foods ultimately make us sick perhaps in ways we can't even imagine Isn't it genuinely dangerous to change the nature of nature itself Nina Fedoroff a leading geneticist and recognized expert in biotechnology answers these questions and more Addressing the fear and mistrust that is rapidly spreading Federoff and her co-author science writer Nancy Brown weave a narrative rich in history technology and science to dispel myths and misunderstandings In the end Fedoroff argues plant biotechnology can help us to become better stewards of the earth while permitting us to feed ourselves and generations of children to come Indeed this new approach to agriculture holds the promise of being the most environmentally conservative way to increase our food supply

The Polyphony of Food Irina Perianova, 2013-01-03 The Polyphony of Food explores food as a multiple discourse in the context of Abraham Maslow's theory of the hierarchy of human needs and motivations In Maslow's theory food as a basic psychological need belongs to the tier of D deficit needs However it is the author's assumption that food and eating cut across the whole hierarchical board of human motivations In many cases food takes on compensatory functions and stands for other needs thus satisfying the entire range of D and even of B being needs Food is an expression of material culture and marks dominant social distinctions in society such as gender class religion age profession and ethnicity Apart from being highly ritualized food serves to highlight what people find beautiful or ugly what they view as acceptable and unacceptable proper or improper Numerous illustrations and anecdotes aim to prove that food and meals are a means to feel safe and secure to affirm cultural and social identity and to serve as a vehicle of bonding affiliation belonging acceptance love and esteem as well as a means of self actualization A special emphasis is placed on the concept of food appropriateness which is linked to politeness and viewed from several standpoints

Bunch of Amateurs Jack Hitt, 2012 Beginning with Ben Franklin's kite and leading all the way to the current TV hit American Idol Hitt argues that the nation's love of self-invented obsessives has always driven the country to rediscover the true heart of the American dream

The Carrot Purple and Other Curious Stories of the Food We Eat Joel S. Denker, 2015-10-01 How many otherwise well educated readers know that the familiar orange carrot was once a novelty It is a little more than 400 years old Domesticated in Afghanistan in 900 AD the purple carrot in fact was the dominant variety until Dutch gardeners bred the young upstart in the seventeenth century After surveying paintings from this era in the Louvre and other museums Dutch agronomist Otto Banga discovered this stunning transformation The story of the carrot is just one of the hidden tales this book recounts Through portraits of a wide range of foods we eat and love from artichokes to strawberries *The Carrot Purple* traces the path of foods from obscurity to familiarity Joel Denker explores how these edible plants were in diverse settings invested with new meaning They acquired not only culinary significance but also ceremonial medicinal and economic

importance Foods were variously savored revered and reviled This entertaining history will enhance the reader s appreciation of a wide array of foods we take for granted From the carrot to the cabbage from cinnamon to coffee from the peanut to the pistachio the plants beans nuts and spices we eat have little known stories that are unearthed and served here with relish
