Potentials And Policy Implications Of Energy And Material Efficiency Improvement:

Potentials and Policy Implications of Energy and Material Efficiency Improvement Ernst Worrell, United Nations. Department for Policy Coordination and Sustainable Development, 1997 There is a growing awareness of the serious problems associated with the provision of sufficient energy to meet human needs and to fuel economic growth world wide This has pointed to the need for energy and material efficiency which would reduce air water and thermal pollution as well as waste production Increasing energy and material efficiency also have the benefits of increased employment improved balance of imports and exports increased security of energy supply and adopting environmentally advantageous energy supply A large potential exists for energy savings through energy and material efficiency improvements Technologies are not now nor will they be in the foreseeable future the limiting factors with regard to continuing energy efficiency improvements There are serious barriers to energy efficiency improvement including unwillingness to invest lack of available and accessible information economic disincentives and organizational barriers A wide range of policy instruments as well as innovative approaches have been tried in some countries in order to achieve the desired energy efficiency approaches These include regulation and guidelines economic instruments and incentives voluntary agreements and actions information education and training and research development and demonstration An area that requires particular attention is that of improved international co operation to develop policy instruments and technologies to meet the needs of developing countries Material efficiency has not received the attention that it deserves Consequently there is a dearth of data on the qualities and quantities of final consumption thus making it difficult to formulate policies Available data however suggest that there is a large potential for improved use of many materials in industrialized countries **Малахитовая шкатулка**, 1954

Potential for Industrial Energy-Efficiency Improvement in the Long Term J. de Beer, 2013-06-29 This book does not give a prediction of what the efficiency will be of the energy use of industrial processes in the future However it does give an exploration of limits to the efficiency of current processes and an indication of what might be achieved if new technologies can be developed At the Department of Science Technology and Society of Utrecht University research had been done to the opportunities for improvement of the energy efficiency in the short term since the 1980 s This had resulted in a comprehensive database on energy efficient measures This database and a possible application are described in Chapter 3 of this book The use of the database induced new research themes around efficiency improvement e g concerning barriers for implementation of measures It was around 1993 that I did a preliminary study to the potential for efficiency improvement in the long term Historical analysis had shown us that the short term potential stayed constant over the years It seemed to be replenished by the introduction of new technologies This lead to the question whether there are limits to the efficiency taking into account both thermodynamic considerations and ideas on the development and dissemination of new technologies

Handbook of Environmental and Resource Economics Jeroen C. J. M. Van den Bergh, 2002-01-01 This major reference book comprises specially commissioned surveys in environmental and resource economics written by an international team of experts Authoritative yet accessible each entry provides a state of the art summary of key areas that will be invaluable to researchers practitioners and advanced students Climate Change and Developing Countries Nijavalli H.

Ravindranath, Jayant A. Sathaye, 2005-12-16 Among global environmental issues climate change has received the largest attention of national and global policy makers researchers industry multilateral banks and NGOs Climate change is one of the most important global environmental problems with unique characteristics It is global long term up to several centuries and involves complex interactions between climatic environmental economic political institutional and technological pressures It is of great significance to developing countries as all the available knowledge suggests that they and particularly their poorer inhabitants are highly vulnerable to climate impacts The projected warming of 1.4 to 5.8 °C by 2100 and the related changes in rainfall pattern rise in sea level and increased frequency of extreme events such as drought hurricanes and storms are likely to threaten food security increase fresh water scarcity lead to decline in biodiversity increase occurrence of vector borne diseases cause flooding of coastal settlements etc Recognizing the potential threat of severe disruptions the United Nations Conference on Environment and Development was organized in 1992 in Rio de Janeiro Brazil to begin to address ways to reduce these impacts which led to the formulation of the UN Framework Convention on Climate Change This Convention and the subsequent Kyoto Protocol recognize the common but differentiated responsibility of developing and industrialized countries in addressing climate change Developing countries thus have a unique role to play in formulating a sound reasoned and well informed response to the threat of climate change **Methodological and Technological Issues**

in Technology Transfer Bert Metz, 2000-10-05 This IPCC Special Report provides a state of the art overview of how to achieve and enhance technology transfer to respond to global climate change **Global Energy** Paul Ekins, Mike

Bradshaw, Jim Watson, 2015-09-17 Energy and access to energy are essential to human life civilisation and development A number of energy issues including energy security energy prices and the polluting emissions for energy use now have high prominence on global agendas of policy and diplomacy In addressing these and other global energy issues the purpose of this book is to lay out the broad global energy landscape exploring how these issues might develop in coming decades and the implications of such developments for energy policy There are great uncertainties which will be identified in respect of some of these issues but many of the defining characteristics of the landscape are clear and the energy policies of all countries will need to be broadly consistent with these if they are to be feasible and achieve their objectives The book therefore provides information about and analysis of energy and related resources and the technologies that have been and are being developed to exploit them that is essential to understanding how the global energy system is developing and how it might develop in the

future But its main focus is the critical economic social political and cultural issues that will determine how energy systems will develop and which technologies are deployed why by whom and who will benefit from them The book has three Parts Part I sets out the current global context for energy system developments outlining the essential trends of global energy supply and demand and atmospheric emissions from the past and going forward and their driving forces Part II explores the options and choices covering both energy demand and energy supply facing national and international policymakers as they confront the challenges of the global context outlined in Part I Part III of the book brings together the discussion in Parts I and II with consideration of possible global energy and environmental futures and of the energy policy choices which will determine which future actually comes to pass Report on the ... Session United Nations. Committee on New and Renewable Sources of Energy and on Energy for Development,1996 **APEC Economic Committee Symposium on the Impact of Expanding Population and Economic Growth on Food, Energy, and the Environment : Saskatoon, Saskatchewan, Canada, September 1997 : Symposium Proceedings** Dan Ciuriak,1998 **Energy Economics: Energy Efficiency in China** Yi-Ming Wei,Hua Liao,2016-11-03 This book presents a succinct overview of research on China s Energy Efficiency as studied by the Center for Energy Environmental Policy Research CEEP Beijing Institute of Technology BIT Energy efficiency linking energy supply demand and market is crucial to the world s energy development China consumes one fourth of the world s energy currently however its per capital consumption is no more than half of that in OECD countries This book provides a comprehensive treatment of the situation of China s energy development proposes and summarizes the methodologies of energy efficiency measurement and uses these methods to analyze the energy consumption at sectoral and provincial level the impacts of economic structure on the energy macro efficiency the price elasticity of oil demand and energy efficiency policies simulations The book provides scientific support for researchers and policy makers dealing with energy efficiency Environmentally Sustainable Buildings Challenges and Policies OECD,2003-04-07 This book presents an analysis of the environmental impacts of the building sector and of current policies to mitigate these impacts in particular with regard to reduction of CO2 emission minimisation of construction and demolition waste and prevention of indoor air pollution Energy Efficiency Great Britain: Parliament: House of Lords: Science and Technology Committee,2005-07-15 Energy Efficiency 2nd report of session 2005 06 Vol 2 Evidence *Climate Change and Industry Structure in China* Chu Wei,2020-02-24 As carbon dioxide is the most significant source of greenhouse gases today its emission quantity has become a primary focus of governments scholars and the general public From the perspective of industrial structure the book mainly explores the features of carbon emissions in China The author thoroughly studies related theories and literature about industrial structure and climate change and reviews the different development histories of developed countries and China Based on historical data this volume discusses the influence of interprovincial industrial structure and income level on carbon emissions and tries to estimate different industrial sectors carbon emissions It

especially studies the case of Zhejiang Province and analyses several factors which affect CO₂ emissions The book provides international readers with rich information about the characteristics patterns and drivers of China's CO₂ emissions which will definitely help scholars and students better understand China's economy
