Bioproducts and Bioprocessing describes the engineering aspects of bioprocessing including advanced food processing techniques and bioproduct development. The main focus of the book is on food applications while numerous industrial applications are highlighted as well. The editors and authors, all experts in various bioprocessing fields, cover the latest developments in the industry and provide perspective on new and potential products and processes. Challenges and opportunities facing the bioproduct manufacturing industry are also discussed. Coverage is far reaching and includes current and future biomass sources and bioprocesses: oilseed processing and refining, starch and protein processing, non-thermal food processing, fermentation, extraction techniques, enzymatic conversions, nanotechnology, microencapsulation and emulsion techniques, bioproducts from fungi and algae, biopolymers and biodegradable edible packaging. Researchers and product developers in food science, agriculture, engineering, bioprocessing and bioproduct development will find *Food and Industrial Bioproducts and Bioprocessing* an invaluable resource. Food Biodeterioration and Preservation Gary S.

Tucker, 2008-04-30. Biodeterioration can be defined as the breakdown of food by agents of microbiological origin either directly or from products of their metabolism. Microbiological sources can be present in foods prior to packaging or on the surfaces of packaging materials. The shelf life and safety of the food will depend on the type and quantity of microorganism as well as the hurdles to their growth offered by various preservation techniques. This book discusses how the agents of food biodeterioration operate and examines the commercially used industrial methods available to control them, allowing the production of safe and wholesome foods. There is an emphasis on the equipment employed to carry out the various methods of preservation. The introductory chapter describes in detail the microorganisms and mechanisms of food breakdown intrinsic to various key food types: dairy, meat and fish, fruit and vegetables. Direct microorganism action will be covered in addition to enzymatic breakdown. The second chapter addresses HACCP including food safety legislation. Subsequent chapters outline the principal commercially used methods of preserving foods. These chapters follow a common structure: theoretical background, flow sheets of operations, food preparation, processing equipment, special features of hygiene, packaging, shelf life and product safety. *Food Biodeterioration and Preservation* is directed at food scientists and technologists in industry and academia. Since it covers all the commonly used methods of food preservation, it will be relevant across the entire food manufacturing industry. *Bioactive Compounds of Edible Oils and Fats* Leo M.L. Nollet, Javed Ahamad, 2024-10-09.

Edible oils and fats are derived from plants and animals and have several health benefits. Edible oils and fats consist of many health-promoting bioactive compounds such as polyunsaturated fatty acids, monounsaturated fatty acids, polyphenols, flavonoids, phytosterols, vitamins and inorganic compounds. The chemical compounds present in edible oils and fats are known for their possible health risks such as coronary heart disease and metabolic diseases, which is why there is a need to check the quality, purity and safety of edible oils and fats. *Bioactive Compounds of Edible Oils and Fats: Health Benefits, Risks and Analysis* provides an overview of different edible oils and fats, health benefits, associated risks and analytical techniques for qualitative and

quantitative guidelines for ensuring their quality and safety using modern analytical tools and techniques This book will provide an important guideline for controlling quality safety and efficacy issues related to edible oils and fats Key Features Provides a detailed overview of different edible oils and fats of plant and animal origin chemistry and identification methods Describes their health benefits risks and the use of different analytical techniques in quality control Describes the applicability of sophisticated analytical techniques such as GC FID GC MS and HPLC for quality control of edible oils and fats Emphasizes the use of recent techniques such as LC MS and FTIR chemometrics in the analysis and quality control of edible oils and fats

Waterproof and Water Repellent Textiles and Clothing John T Williams,2017-11-21 Waterproof and Water Repellent Textiles and Clothing provides systematic coverage of the key types of finishes and high performance materials from conventional wax and silicone through controversial but widely used fluoropolymers and advanced techniques such as atmospheric plasma deposition and sol gel technology The book is an essential resource for all those engaged in garment

development production and finishing and for academics engaged in research into apparel technology and textile science. Rapid innovation in this field is driving new performance demands in many areas including the sporting and military sectors. However, another innovation driver is the regulatory framework in the USA, Europe and globally, addressing both health concerns e.g. with PFOS, PFOA and environmental impacts e.g. C8 fluorocarbon finishes. Both of these aspects are fully covered along with the replacement materials technologies currently available and under development. In addition, oleophobic and multifunctional coatings are discussed, as are aspects of performance testing and applications in sportswear, protective clothing and footwear. Introduces innovative materials and technologies exploring their current and potential use across different sectors. Provides expert guidance on the health and environmental aspects of key waterproof materials and coatings and their associated regulations. Demystifies testing processes and design principles.

Industrial Crops Von Mark V. Cruz, David A. Dierig, 2014-11-17. The volume on Industrial Crop Breeding will be part of the series Handbook of Plant Breeding. This volume will focus on the emerging area of plant breeding for sustainable production of transportation fuels and bio-based products using the current advances in the field. The book is scheduled to consist of a total number of 30 chapters divided into four sections. The sections will emphasize crops being considered for different challenge areas including oil crops for biodiesel, sugar, starch and cellulosic crops for biofuel, crops for bio-products and issues and future prospects. A chapter introducing the first three sections will also be included. Outstanding scientists for each crop species are proposed as senior authors who may invite co-authors to contribute part of a chapter to provide additional expertise or perspective. The proposed authors will represent various national and international institutions to get a more diverse view on the topic and somehow get a global view on the common issues that researchers on industrial crops are facing. The book will comprise primarily of specific issues, available germplasm, breeding techniques and potential geographical areas of production pertaining to individual crops being considered for industrial uses. We hope to encourage the proposed authors of new crops to provide an estimate of the crop readiness for commercial development and discuss the limitations. This book will be of interest and envisioned to serve as an updated reference to researchers in both academic and industrial settings to students and teachers of plant breeding and to policy makers who are looking for alternative solutions to dependency on imported petroleum products.

Fruit Oils: Chemistry and Functionality Mohamed Fawzy Ramadan, 2019-05-08. Fruit Oils: Chemistry and Functionality presents a comprehensive overview of recent advances in the chemistry and functionality of lipid bioactive phytochemicals found in fruit oils. The chapters in this text examine the composition, physicochemical characteristics and organoleptic attributes of each of the major fruit oils. The nutritional quality, oxidative stability and potential food and non-food applications of these oils are also extensively covered. The potential health benefits of the bioactive lipids found in these fruit oils are also a focus of this text. For each oil presented, the levels of omega 9, omega 6 and omega 3 fatty acids are specified, indicating the level of health-promoting traits exhibited in each. The oils and fats extracted

from fruits generally differ from one another both in terms of their major and minor bioactive constituents. The methods used to extract oils and fats as well as the processing techniques such as refining, bleaching and deodorization affect their major and minor constituents. In addition, different post processing treatments of fruit oils and fats may alter or degrade important bioactive constituents. Treatments such as heating, frying, cooking and storage and major constituents such as sterols and tocopherols are extensively covered in this text. Although there have been reference works published on the composition and biological properties of lipids from oilseeds, there is currently no book focused on the composition and functionality of fruit oils. *Fruit Oils: Chemistry and Functionality* aims to fill this gap for researchers, presenting a detailed overview of the chemical makeup and functionality of all the important fruit oils. *Agroecosystems* K. R. Krishna, 2013-12-04. Comprised of three sections, this covers the nutrient dynamics and productivity of global agroecosystems. It focuses on the major aspects that make up agroecosystems such as soils, climate, crops, nutrient dynamics and productivity. It introduces agroecosystems and describes global soil types that support vast crop belts, then deals with the principles of agroecosystems. **Food Processing Technology** P.J. Fellows, 2009-06-22. The first edition of Food processing technology was quickly adopted as the standard text by many food science and technology courses. This completely revised and updated third edition consolidates the position of this textbook as the best single volume introduction to food manufacturing technologies available. This edition has been updated and extended to include the many developments that have taken place since the second edition was published. In particular, advances in microprocessor control of equipment, minimal processing technologies, functional foods, developments in active or intelligent packaging and storage and distribution logistics are described. Technologies that relate to cost savings, environmental improvement or enhanced product quality are highlighted. Additionally, sections in each chapter on the impact of processing on food borne micro organisms are included for the first time. Introduces a range of processing techniques that are used in food manufacturing. Explains the key principles of each process including the equipment used and the effects of processing on micro organisms that contaminate foods. Describes post processing operations including packaging and distribution logistics.
