High-speed Serial Buses in Embedded Systems Feng Zhang, 2020-01-03 This book describes the most frequently used high speed serial buses in embedded systems, especially those used by FPGAs. These buses employ SerDes, JESD204, SRIIO, PCIe, Aurora, and SATA protocols for chip to chip and board to board communication, and CPCIe, VPX, FC, and Infiniband protocols for inter chassis communication. For each type, the book provides the bus history and version info while also assessing its advantages and limitations. Furthermore, it offers a detailed guide to implementing these buses in FPGA design, from the physical layer and link synchronization to the frame format and application command. Given its scope, the book offers a valuable resource for researchers, R D engineers, and graduate students in computer science or electronics who wish to learn the protocol principles, structures, and applications of high speed serial buses.
