

JURASSIC PARK RAPTOR VS REAL RAPTORS

(based on the current scientific understanding)

CLEVER GIRL?

The movie portrays raptors as ultra intelligent killing machines.

Although intelligence in dinosaurs and raptors is often underappreciated, there is no evidence for *Deinonychus* and its possessing it to such high levels.

SIZE

In the movie raptors are tall enough to stare down Ned in the eye.

Deinonychus would have stood as tall as a short adult and *Velociraptor* were a half-size from height.

Since Jurassic Park was released, raptors of a similar size to the ones in it, the *Mutaborator* and *Archibator* have been described.

NAMING

The Jurassic Park raptors were based on the North American *Deinonychus*.

In the movie they are called *Velociraptors*, partly because of naming issues at the time, but mostly because it just sounds cooler.

HANDS

Movie raptors have downward facing hands.

The actual dinosaurs were not able to rotate their hands that way. Their hands faced each other in a "flapping" position.

FEET

The raptors in Jurassic Park walk on big padded feet.

Deinonychus and its relatives had more slender, bird-like feet.

FEATHERS

The movie features large white winged monsters. *Velociraptor*, *Deinonychus* and its were covered in feathers from head to tail.

TAILS

The movie raptors have deadly tails which they wriggle around. The real animals used their tails as a stiff counterbalance, holding it straight with vertical feathers.

Raptors Keith L. Bildstein,2017-05-02 Raptors are formally classified into five families and include birds such as eagles ospreys kites true hawks buzzards harriers vultures and falcons that are familiar and recognized by many observers These

diurnal birds of prey are found on every continent except Antarctica and can thrive in seemingly inhospitable spots such as deserts and the tundra. They have powerful talons and hooked beaks for cutting and tearing meat and keen binocular vision to aid in their hunting prowess. Because of their large size, distinctive feeding habits and long distance flight patterns, raptors intrigue humans and have been the subject of much general interest as well as extensive scientific research. Keith L. Bildstein has watched and studied raptors on five continents and is well prepared to explain their critical importance not only as ecological entities but also as inspirational tokens across natural and human dominated landscapes. His book offers a comprehensive and accessible account of raptors including their evolutionary history, their relationships to other groups of birds, their sensory abilities, their general natural history, their breeding ecology and feeding behavior and threats to their survival in a human dominated world. Biologically sound but readable, *Raptors* is a nontechnical overview of this captivating group. It will allow naturalists, birders, hawk watchers, science educators, schoolchildren and the general public along with new students in the field of raptor biology to understand and appreciate these birds and in so doing better protect them.
