Rarefied Gas Dynamics 22nd International Symposium Sydney Australia 9 14 July :

Rarefied Gas Dynamics Timothy J. Bartel, Michael A. Gallis, 2001-10-05 This volume is concerned with the properties and flows of rarefied gases and with the interactions of these gases with solid surfaces and force fields Topics include low density aerodynamics jets plumes and propulsion clusters aerosols and internal flows and vacuum systems Rarefied Gas Dynamics M. Capitelli, 2005-06-21 The book contains papers presented at the 24th International Symposium on Rarefied Gas Dynamics a conference that is recognized as the principal forum for the presentation of recent advances in the field of rarefied gas dynamics The topics include fundamental aspects of Boltzmann and related equations transport theory Monte Carlo methods kinetic theory gas phase molecular collision dynamics gas surface interaction state to state kinetics rarefied plasmas and non equilibrium plasma kinetics Applications in the fields of internal flows vacuum systems rarefied jets plumes molecular beams scramjets and hypersonics microflows granular gases electrical thrusters are discussed Researchers in the fields of mathematics physics chemistry and engineering can strongly benefit from the interdisciplinary nature of the book

Stochastic Numerics for the Boltzmann Equation Sergej Rjasanow, Wolfgang Wagner, 2005-11-04 Stochastic numerical methods play an important role in large scale computations in the applied sciences The first goal of this book is to give a mathematical description of classical direct simulation Monte Carlo DSMC procedures for rarefied gases using the theory of Markov processes as a unifying framework The second goal is a systematic treatment of an extension of DSMC called stochastic weighted particle method This method includes several new features which are introduced for the purpose of variance reduction rare event simulation Rigorous convergence results as well as detailed numerical studies are presented

Rarefied Gas Dynamics Andrew D. Ketsdever, E.P. Munz, 2003-05-19 The papers in these proceedings were peer reviewed The RGD Symposia are highly interdisciplinary and encompass all aspects of rarefaction and non equilibrium phenomena in gases Rarefied flow phenomena include the mechanics and physics of low density gases and the analysis of flows which take place on a spatial scale comparable to the mean free path of a gas Topics covered include Kinetic theory and transport theory numerical methods including direct simulation Monte Carlo and molecular dynamics gas surface phenomena nano and microscale flows molecular beams atom and molecular optics clusters and aerosols external flows including space and vacuum technologies plume flows hypersonic flows molecular collision dynamics relaxation processes ionized gas flows physics of the space environment plasma processing experimental techniques diagnostics including laser induced fluorescence and electron beams applications With the increase in space activities and microfabrication capabilities new themes have emerged including rarefied hypersonic flows non equilibrium gases plasma processing nano and micro scale flows at relatively high pressures along with parallel and hybrid computational developments Because the RGD Symposia are recognized as the principle forum for the presentation of recent advances in this field it is a must for engineers and scientists in a variety of specialties Non-equilibrium Evaporation and Condensation Processes Yuri B. Zudin, 2021-02-27 This

present book is concerned with analytical approaches to statement and solution of problems of non equilibrium evaporation and condensation From analytical solutions one is capable to understand and represent in a transparent form the principal laws especially in the study of a new phenomenon or a process This is why analytical methods are always employed on the first stage of mathematical modeling Analytical solutions are also used as test models for validation of results numerical solutions Non equilibrium evaporation and condensation processes play an important role in a number of fundamental and applied problems laser methods for processing of materials depressurization of the protection cover of nuclear propulsion units solar radiation on a comet surface explosive boiling of superheated liquid thermodynamic principles of superfluid helium Analytical relations provide an adequate description of the essence of a physical phenomenon **Monte Carlo and**

Quasi-Monte Carlo Methods 2002 Harald Niederreiter, 2011-06-28 This book represents the refereed proceedings of the Fifth International Conference on Monte Carlo and Quasi Monte Carlo Methods in Scientific Computing which was held at the National University of Singapore in the year 2002 An important feature are invited surveys of the state of the art in key areas such as multidimensional numerical integration low discrepancy point sets computational complexity finance and other applications of Monte Carlo and quasi Monte Carlo methods These proceedings also include carefully selected contributed papers on all aspects of Monte Carlo and quasi Monte Carlo methods The reader will be informed about current research in this very active area **35th AIAA Thermophysics Conference ,2001 Entropy Based Design and Analysis of**

Fluids Engineering Systems Greg F. Naterer, Jose A. Camberos, 2008-02-27 Entropy based design EBD is an emerging new methodology that incorporates the Second Law into computational fluid dynamics CFD and measurement techniques The book provides an overview of the design tool and its applications in various areas like microfluidics multiphase flows turbulence compressible flows and others It develops computational and experimental methods to track regions of highest entropy production Containing extensive end of chapter references the text also provides comprehensive coverage related to entropy and the Second Law of laser based methods numerical methods in CFD entropy formulations and the Second Law in a range of thermofluid applications *DSMC Simulation of Separated Flows about Flared Bodies at Hypersonic Conditions*

James N. Moss, 2000 This paper describes the results of a numerical study of interacting hypersonic flows at conditions that can be produced in ground based test facilities The computations are made with the direct simulation Monte Carlo DSMC method of Bird The focus is on Mach 10 flows about flared axisymmetric configurations both hollow cylinder flares and double cones The flow conditions are those for which experiments have been or will be performed in the ONERA R5Ch low density wind tunnel and the Calspan University of Buffalo Research Center CUBRC Large Energy National Shock LENS tunnel The range of flow conditions model configurations and model sizes provides a significant range of shock shock and shock boundary layer interactions at low Reynolds number conditions Results presented will highlight the sensitivity of the calculations to grid resolution contrast the difference in flow structure for hypersonic cold flows and those of more energetic
