Retirement Life Insurance Steve Heller, 2017-11-07 Do your clients have any idea of what they can should spend in retirement Do they know what they need to do to optimize their retirement spending How can you protect a spouse from the drop in social security if a client dies early Why is it likely that buying insurance or buying a fixed annuity can dramatically increase the level of your client's spending even if your customer is already retired What if you could show your client exactly what the impact would be and at what level they would need to buy to achieve a certain level of spending How can buying a fixed annuity be a hedge against term life expiration and what level is required When should your client start taking social security What can your client spend now and how much can that improve if they purchase insurance or an annuity from you All these questions and more are answered in this book and in the free software that accompanies this book The software though more complex than most end users would care to learn offers you the opportunity to load in customer financial data and give them results that will calculate various options The amazing and counter intuitive part is that it is highly likely that most individuals can see their monthly spending capability go up dramatically by buying insurance and or buying a fixed annuity and the software enables you to zero in on the desired level Even though life insurance is an old established financial product and annuities are even older there is one enormous market that has been overlooked the market for additional retirement funds for a surviving spouse and replacement of Social Security payments that are lost after the death of a spouse This book explains how to address this market and includes instructions and a license for software that illustrates how insurance and annuities can increase sustainable spending in retirement Most people have no idea how much they can really spend in retirement Many are living frugal lives spending their social security while saving for a rainy day They buy life insurance in batches of tens thousands of dollars because it sounds good or what they think they can afford Almost no one would believe that buying expensive life insurance after age 60 actually can free them to spend MUCH more on a monthly basis Furthermore no one is looking at an optimum return on the investment based on a certain level of potential spending Until now This book and the accompanying software enable you the life agent to input the customer data and come up with a plan for your customer and provide proof that the plan will work for them The book explains what goes into making these calculations why they work the way they do and gives various case studies that quite often show that buying term insurance or buying an annuity after retirement can be great investments for them We think your customers will be convinced There are detailed instructions as

to use of the software at www.steveheller.org rhino that accompanies the book with built in case studies that you can use But even more importantly you can input a customer s data and provide them with options and actually show them the benefits or give them the solutions that they would otherwise not know exist These solutions will be invaluable to your business and offer you a distinct advantage over competition that are not selling in this manner **Forest Management in Nepal** Ian

Hill,1999-01-01 Forests play a vital role in maintaining Nepal s impressive biodiversity which has global significance With only 0.1 percent of the world s total area Nepal contains 2 percent of the planet s flowering plants 8 percent of its birds and 4 percent of its mammals As Nepal develops its forest resources it needs to minimize the biotic pressures affecting the structure and dynamics of forest plant communities and wildlife populations and thereby reverse the current destructive pressures on the country s biodiversity The study aims to provide a better understanding of the ways in which forest resources are used in Nepal Its focus is to examine systematically the costs and benefits of present and possible future sustainable and biodiversity friendly management practices from household national and global perspectives The authors define the analytical framework and the costs of financial and economic alternatives They also present the economic social institutional and legal issues and recommend strategies for change The report should be of use to national and donor agencies concerned with the management of natural resources and conservation of biodiversity in Nepal providing a framework for possible future donor support to the sector It highlights issues that are of importance in the formulation and implementation of natural resource management programs by government and non government agencies **Amazing**
