Ocean Observation based on Underwater Acoustic Technology, volume II Xuebo Zhang, Haixin Sun, Arata Kaneko, Suleman Mazhar, 2024-12-02 Since the sound wave is the only information carrier that can propagate long distances in the ocean underwater acoustic technology based on sound waves undoubtedly plays an important role in ocean observation The development of underwater acoustic technology requires the support of various underwater acoustic sensors and signal processing techniques The function of an underwater acoustic sensor is to conduct the conversion between an underwater acoustic signal and an electric signal Their performance directly

determines the quality of underwater acoustic equipment. However, the harsh environment such as high pressure, high temperature and highly corrosive fluids, as well as different requirements such as low frequency, broad bandwidth, high power and deep water, often affect the physical properties of materials and structural performance of transducers, which deteriorates the transducer performance. Due to the lack of comprehensive research on key techniques including material physical properties and interfacial bond properties, the reliability of structural components is often seriously affected by environmental conditions, which may lead to major performance degradation or even failure with the device performance. Therefore, it is challenging for the transducer design to balance the acoustic performance and the device's stability.

Auralization Michael Vorländer, 2007-10-27 Auralization is the creation of audible acoustic sceneries from computer-generated data. The term auralization is to be understood as being analogue to the well-known technique of visualization. In visual illustration of scenes, data or any other meaningful information in movie animation and in computer graphics, we describe the process of making visible as visualization. In acoustics, auralization is taking place when acoustic effects, primary sound signals or means of sound reinforcement or sound transmission are processed to be presented by using electro-acoustic equipment. This book is organized as a comprehensive collection of basics, methodology and strategies of acoustic simulation and auralization. With mathematical background, advanced students will be able to follow the main strategy of auralization easily and work on own implementations of auralization in various fields of applications in acoustic engineering, sound design and virtual reality. For readers interested in basic research, the technique of auralization may be useful to create sound stimuli for specific investigations in linguistic, medical, neurological and psychological research and in the field of human-machine interaction.

The Bible in Music Siobhán Dowling Long, John F.A. Sawyer, 2015-09-03 There have been numerous publications in the last decades on the Bible in literature, film and art. But until now, no reference work has yet appeared on the Bible as it appears in Western music. In *The Bible in Music: A Dictionary of Songs, Works and More*, scholars Siobhán Dowling Long and John F.A. Sawyer correct this gap in Biblical reference literature, providing for the first time a convenient guide to musical interpretations of the Bible. Alongside examples of classical music from the Middle Ages through modern times, Dowling Long and Sawyer also bring attention to the Bible's impact on popular culture, with numerous entries on hymns, spirituals, musicals, film music and contemporary popular music. Each entry contains essential information about the original context of the work, date, composer, etc., and where relevant, its afterlife in literature, film, politics and liturgy. It includes an index of biblical references and an index of biblical names, as well as a detailed timeline that brings to the fore key events, works and publications, placing them in their historical context. There is also a bibliography, a glossary of technical terms and an index of artists, authors and composers. *The Bible in Music* will fascinate anyone familiar with the Bible, but it is also designed to encourage choirs, musicians, musicologists, lecturers, teachers and students of music and religious education to discover and perform some less well-known pieces, as well as helping them to listen to familiar music with a fresh
