Review Of Internal Medicine 2nd Pb 2000

David L. Longworth, James K. Stoller

Review Of Internal Medicine 2nd Pb 2000:

Nuclear Medicine Radiation Dosimetry Brian J McParland, 2010-07-03 Complexities of the requirements for accurate radiation dosimetry evaluation in both diagnostic and therapeutic nuclear medicine including PET have grown over the past decade. This is due primarily to four factors: Growing consideration of accurate patient specific treatment planning for radionuclide therapy as a means of improving the therapeutic benefit; development of more realistic anthropomorphic phantoms and their use in estimating radiation transport and dosimetry in patients; Design and use of advanced Monte Carlo algorithms in calculating the above mentioned radiation transport and dosimetry which require the user to have a thorough understanding of the theoretical principles used in such algorithms; their appropriateness and their limitations; increasing regulatory scrutiny of the radiation dose burden borne by nuclear medicine patients in the clinic and in the development of new radiopharmaceuticals thus requiring more accurate and robust dosimetry evaluations. An element common to all four factors is the need for precise radiation dosimetry in nuclear medicine which is fundamental to the therapeutic success of a patient undergoing radionuclide therapy and to the safety of the patients undergoing diagnostic nuclear medicine and PET procedures. As the complexity of internal radiation dosimetry applied to diagnostic and therapeutic nuclear medicine increases, this book will provide the theoretical foundations for enabling the practising nuclear medicine physicist to understand the dosimetry calculations being used and their limitations, allowing the research nuclear medicine physicist to critically examine the internal radiation dosimetry algorithms available and under development and providing the developers of Monte Carlo codes for the transport of radiation resulting from internal radioactive sources with the only comprehensive and definitive.

Pharmacodynamic Basis of Herbal Medicine Manuchair Ebadi, 2010-12-12 HERBAL MEDICINE FROM A WESTERN POINT OF VIEW Herbal remedies have become a major factor in American health care. Botanicals like Ginseng, Ma Huang, St John's Wort and Valerian are now household words throughout the world. Since many of these natural drugs are sold over the counter, often consumers mistakenly assume that they are completely safe.

Diagnostic Nuclear Medicine David I. Hamilton, 2013-11-11 In the development of many medical technologies, the beginning is characterised by an emphasis on the basic scientific principles of the technology and the optimisation of the functional aspects of the technology. As a technology matures, there is a tendency for the underlying principles to be forgotten as the clinical applications begin to develop and the focus moves to an understanding of the clinical application. This maturity brings with it new challenges for those involved in the use of the technology. An acceptance of the methodology may lead to a scaling back of the basic training of staff into the fundamentals of the techniques and lead to a lack of questioning as to those issues which lead to the optimisation in clinical applications. This lack of basic training may ultimately lead to a stifling of research and development of the technology as a whole as trained staff becomes a scarce commodity. Nuclear medicine is no exception to this development cycle. As a medical specialty, the discipline has matured. The basic imaging technology has become more reliable in everyday use, requiring less

input from scientific staff Clinical procedures have become protocols which are often followed without due understanding of the basic principles underlying the imaging procedure This is clearly demonstrated when new radiopharmaceuticals are introduced into the market place
