Review of the Army's Technical Guides on Assessing and Managing Chemical Hazards to Deployed Personnel
National Research Council, Division on Earth and Life Studies, Board on Environmental Studies and Toxicology, Committee on
Toxicology, Subcommittee on the Toxicological Risks to Deployed Military Personnel, 2004-08-03 To guide mission planning
military decision makers need information on the health risks of potential exposures to individual soldiers and their potential
impact on mission operations To help with the assessment of chemical hazards the U S Army Center for Health Promotion
and Preventive Medicine developed three technical guides for characterizing chemicals in terms of their risks to the mission
and to the health of the force The report reviews these guides for their scientific validity and conformance with current risk
assessment practices The report finds that the military exposure guidelines are appropriate with some modification for
providing force health protection but that for assessing mission risk a new set of exposure guidelines is needed that predict
concentrations at which health effects would degrade the performance of enough soldiers to hinder mission accomplishment

U.S. Army Medical Department Journal, 2010 Emergency and Continuous Exposure Guidance Levels for Selected Submarine Contaminants National Research Council, Division on Earth and Life Studies, Board on Environmental Studies and Toxicology, Committee on Toxicology, Committee on Emergency and Continuous Exposure Guidance Levels for Selected Submarine Contaminants, 2008-06-09 U S Navy personnel who work on submarines are in an enclosed and isolated environment for days or weeks at a time when at sea To protect workers from potential adverse health effects due to those conditions the U S Navy has established exposure guidance levels for a number of contaminants In this latest report in a series the Navy asked the National Research Council NRC to review and develop when necessary exposure guidance levels for 11 contaminants The report recommends exposure levels for hydrogen that are lower than current Navy guidelines For all other contaminants except for two for which there are insufficient data recommended levels are similar to or slightly higher than those proposed by the Navy The report finds that overall there is very little exposure data available on the submarine environment and echoes recommendations from earlier NRC reports to expand exposure monitoring in Review of the Army's Technical Guides on Assessing and Managing Chemical Hazards to Deployed submarines Personnel National Research Council, Division on Earth and Life Studies, Board on Environmental Studies and Toxicology, Committee on Toxicology, Subcommittee on the Toxicological Risks to Deployed Military Personnel, 2004-09-03 To guide mission planning military decision makers need information on the health risks of potential exposures to individual soldiers and their potential impact on mission operations To help with the assessment of chemical hazards the U S Army Center for Health Promotion and Preventive Medicine developed three technical guides for characterizing chemicals in terms of their risks to the mission and to the health of the force The report reviews these guides for their scientific validity and
