Recapturing a Future for Space Exploration National Research Council, Division on Engineering and Physical Sciences, Aeronautics and Space Engineering Board, Space Studies Board, Committee for the Decadal Survey on Biological and Physical Sciences in Space, 2012-01-30 More than four decades have passed since a human first set foot on the Moon Great strides have been made in our understanding of what is required to support an enduring human presence in space as evidenced by progressively more advanced orbiting human outposts culminating in the current International Space Station ISS However of the more than 500 humans who have so far ventured into space most have gone only as far as near Earth orbit and none have traveled beyond the orbit of the Moon Achieving humans further progress into the solar system had proved far more difficult than imagined in the heady days of the Apollo missions but the potential rewards remain substantial During its more than 50 year history NASA's success in human space exploration has depended on the agency's ability to effectively address a wide range of biomedical engineering physical science and related obstacles an achievement made possible by NASA's strong and productive commitments to life and physical sciences research for human space exploration and by its use of human space exploration infrastructures for scientific discovery The Committee for the Decadal Survey of Biological and Physical Sciences acknowledges the many achievements of NASA which are all the more remarkable given budgetary challenges and changing directions within the agency In the past decade however a consequence of those challenges has been a life and physical sciences research program that was dramatically reduced in both scale and scope with the result that the agency is poorly positioned to take full advantage of the scientific opportunities offered by the now fully equipped and staffed ISS laboratory or to effectively pursue the scientific research needed to support the development of advanced human exploration capabilities Although its review has left it deeply concerned about the current state of NASA's life and physical sciences research the Committee for the Decadal Survey on Biological and Physical Sciences in Space is nevertheless convinced that a

focused science and engineering program can achieve successes that will bring the space community the U S public and policymakers to an understanding that we are ready for the next significant phase of human space exploration The goal of this report is to lay out steps and develop a forward looking portfolio of research that will provide the basis for recapturing the excitement and value of human spaceflight thereby enabling the U S space program to deliver on new exploration initiatives that serve the nation excite the public and place the United States again at the forefront of space exploration for the global good

Shackelford, Virgil Zeigler-Hill, 2017-08-01 This review of recent evolutionary theories on psychopathology takes on controversies and contradictions both with established psychological thought and within the evolutionary field itself Opening with the ancestral origins of the familiar biopsychosocial model of psychological conditions the book traces distinctive biological and cultural pathways shaping human development and their critical impact on psychiatric and medical disorders Analyses of disparate phenomena such as jealousy social anxiety depressive symptoms and antisocial behavior describe adaptive functions that have far outlasted their usefulness or that require further study and perhaps new directions for treatment In addition the book's compelling explorations of violence greed addiction and suicide challenge us to revisit many of our assumptions regarding what it means to be human Included in the coverage Evolutionary foundations of psychiatric compared to non psychiatric disorders Evolutionary psychopathology uncomplicated depression and the distinction between normal and disordered sadness Depression is rumination really adaptive A CBT approach to coping with sexual betrayal and the green eyed monster Criminology's modern synthesis remaking the science of crime with Darwinian insight Anthro-pathology the abiding malady of the species With its wealth of interdisciplinary viewpoints The Evolution of Psychopathology makes an appropriate supplementary text for advanced graduate courses in the evolutionary sciences particularly in psychology biology anthropology sociology and philosophy Annual Plant Reviews, Plant Cell Separation and Adhesion Jeremy A. Roberts, Zinnia Gonzalez-Carranza, 2008-04-15 Cell separation is an important process that occurs throughout the life cycle of a plant It enables the radicle to emerge from the germinating seed vascular tissue to differentiate sculpturing of leaves and flowers to take place pollen to be shed from the mature anther fruit to soften senescent and non functional organs to be lost and seeds to be shed In addition to its intrinsic scientific interest many of the developmental processes to which it contributes have importance for agriculture and horticulture This is the first volume to focus exclusively on these processes and to link improvements in our scientific understanding with methods that may allow us to manipulate cell separation and adhesion to the benefit of the agricultural and horticultural industries It will therefore be of interest to the experimental scientist and to those who wish to apply these techniques commercially *Handbook of Multicultural Perspectives on Stress and Coping* Paul T. P. Wong, Lilian C. J. Wong, 2007-02-15 Has the developing world developed modern concepts of stress Are

coping methods the same around the globe Such questions are not simple to answer and until recently few knew to ask them In recent years Western psychologists have recognized that their prevailing views of psychology do not always translate worldwide and that no culture has a monopoly on either stress or coping The Handbook of Multicultural Perspectives on Stress and Coping was created to address this realization This unique volume moves beyond simple comparisons of behaviors in other countries by clarifying critical concepts in stress and coping analyzing and synthesizing vast amounts of global data and identifying constructs and methodologies necessary for meaningful cross cultural research An international multiethnic panel of forty five contributors presents elegant studies of stress survival and resilience as cultures evolve and countries interact including Personal transformation as a coping strategy Psychological skills that enhance intercultural adjustment Individual versus collectivist values in coping Buddhist and Taoist traditions in coping The cumulative effects of historical environmental and political stressors on nations in the Middle East Specific cross cultural perspectives from Latino American families to Canadian aboriginal peoples to minority university students The editors have assembled a vital store of knowledge raising crucial implications for clinicians working with immigrant international populations and evaluating the current state of theory research and assessment The Handbook documents major steps toward scientific advancement and human understanding

Applied Evolutionary Psychology S. Craig Roberts, 2011-11-24 Human behaviour is marvellous in its complexity variability and unpredictability Understanding it however is not solely the role of psychologists everyone has a vested interest in it from individuals to organisations and industry Recently biologists and psychologists have had considerable success incorporating insights from evolutionary theory to help them understand some fundamental psychological issues in a discipline now known as evolutionary psychology However to date these useful insights have not been widely applied to tackle specific practical problems or issues in society This innovative new book kick starts this process It provides a foundation for an incipient focus on applications of evolutionary research It draws together a collection of renowned academics from a disparate set of fields whose common interest lies in using evolutionary thinking to

inform their research Topics range from reviews of evolutionary perspectives on adult and family relationships insights into business economics and marketing health and interactions with technology and the media through to major global and societal issues such as promoting green behaviour cooperation and public health and tackling crime terrorism and prejudice No other book has focused as specifically and with such broad scope on the applications of modern evolutionary psychology While the rapidly growing number of books on evolutionary psychology succeed in describing current theoretical thinking illustrated and supported by empirical studies this book uses this established basis as a backdrop and starting point for a more focused exploration of practical application This groundbreaking book will be valuable for students and researchers in evolutionary and applied psychology as well as biology and anthropology **Books In Print 2004-2005** Ed Bowker
