Euroanalysis VIII: European Conference on Analytical Chemistry

It is the responsibility of the host country to organise the Triennial European Conference on Analytical Chemistry, namely Euroanalysis. This year it is the turn of the United Kingdom to host this important event under the watchful eye of the Conference Præsidium. The 1993 version of the conference is Euroanalysis VIII, the eighth in the series, and will be held at the University of Edinburgh from Sunday to Saturday, September 5–11, 1993. Of course, the organisation by the Analytical Division of The Royal Society of Chemistry is on behalf of the Working Party on Analytical Chemistry of the Federation of European Chemical Societies (FECS). The event also carries sponsorship from the International Union of Pure and Applied Chemistry and carries the designation FECS Event No. 188.

Circular 3, with Registration forms and Notes to Participants including the Outline Scientific Programme, has now been issued and can be obtained from Miss P. E. Hutchinson, Secretary, Analytical Division, The Royal Society of Chemistry, Burlington House, Piccadilly, London W1V 0BN, United Kingdom.

The Scientific Programme has thirty-nine oral sessions to follow the Opening Session on Monday morning, September 6, 1993. This suggests that participants will have a lot of decisions to make on the selection of lectures to attend from within the five parallel streams available between Monday and Friday. In addition to the extensive oral presentation pro-

gramme there are Poster Sessions, an Educational Discussion Session, and an Exhibition of Books and Journals (present throughout the week).

To enable participants to give full attention to the scientific fare, there is a full daytime programme of visits and trips available to accompanying persons. However, time is set aside on the Wednesday afternoon for everyone to partake of a visit away from the Conference venue. This will refresh participants for the programme for the rest of the week.

The evening social events that are being laid on are planned to permit participants to exchange views and to discuss the scientific part of the programme, as much as to enjoy the surroundings, to renew friendships and to make new ones.

Euroanalysis VIII, except for the Opening Ceremony, which will be held in McEwan Hall, will be held in the Appleton Tower, George Square. The various oral presentation streams will be devoted to the following.

Monday:

Sensors; Pharmaceutical and Biomedical Analysis; Atmospheric Analysis; Conservation of Arts; Laser-based Techniques.

Tuesday:

Materials and Surface Analysis; Pharmaceutical and Biomedical Analysis (continued); Analysis of Water; Flow Analysis; Biosensors; Education Discussion Session.

Wednesday:

Electroanalytical Approaches; Analysis

of Soils and Sediments; Separation Science; Validation of Analytical Measurements (VAM).

Thursday:

Validity of Forensic Analysis; New Methods and Strategies in Environmental Analysis (sponsored by *Analytica Chimica Acta*); Atomic Spectrometry; Separation Science; Bioselective Methods; COBAC.

Friday:

Industrial Analysis; Coupled Techniques; Food and Drink Analysis; Molecular Spectroscopy; Chemometrics and COBAC.

The Poster Sessions will be on Monday, Tuesday and Thursday at times when there will be breaks in the oral presentation programme.

Manuscripts of accepted contributed papers will be considered for publication in a special issue of *The Analyst*. Papers may also be offered for publication in the *Journal of Analytical Atomic Spectrometry and Analytical Proceedings*. The invited lectures will be published in a volume of the Proceedings of the Conference.

There is much on offer; to find out more about Euroanalysis VIII write to Miss P. E. Hutchinson at the address given above, or for a quick response FAX her on +44-71-734-1227. I hope to see you in Edinburgh at Euroanalysis VIII.

Reviews On Analytical Chemistry Euroanalysis Viii:

Reviews on Analytical Chemistry David Littlejohn, Duncan Thorburn Burns, Royal Society of Chemistry (Great Britain), 1994 Comprises papers from the September 1993 conference emphasizing developments in environmental and biomedical analyses and sensors Topics include plasma source mass spectrometry laser induced molecular luminescence chemical contaminants in the food supply and investigations of human metabolism of trace elements using stable isotopes Annotation copyright by Book News Inc Portland OR *Analytical Advances for Hydrocarbon Research* Chang Samuel Hsu, 2012-12-06 Determining the composition and properties of complex hydrocarbon mixtures in petroleum synthetic fuels and petrochemical products usually requires a battery of analytical techniques that detect and measure specific features of the molecules such as boiling point mass nuclear magnetic resonance frequencies etc there have always been a need for new and improved analytical technology to better understand hydrocarbon chemistry and processes This book provides an overview of recent advances and future challenges in modern analytical techniques that are commonly used in hydrocarbon applications Experts in each of the areas covered have reviewed the state of the art thus creating a book that will be useful to readers at all levels in academic industry and research institutions **Design and Analysis in Chemical Research** Roy L. Tranter, 2000 Recent years have seen massive changes in the tools and instrumentation available to chemists in the scale of databases linking the properties of pure materials solutions or other mixtures to molecular structure and in the sheer ability of chemists to collect data through automated data acquisition systems Despite these advances many chemists still apply only rudimentary data analysis techniques and remain unaware of the advances made in information extraction over the last decade or so This volume covers the principles of design and analysis in chemical research and development It is organised in chapters dealing with major activities and understanding is generated through large numbers of examples and practical applications relating to research and development chemistry Authors adopt a user friendly approach concentrating on principles and interpretation rather than formal derivation and proof A principal theme is that statistics and chemometrics which relies on statistics are essentially extensions of the logical processes used every day by chemists and that they bring greater understanding of problems more quickly and easily than purely intuitive methods **Analysis of Modern Paints** Tom Learner, 2004 Outlines the techniques that are currently employed to analyze the synthetic resins used in modern painting materials such as pyrolysis gas chromatography mass spectrometry Fourier transform infrared spectroscopy and direct temperature resolved mass spectrometry For each technique results are given for standard samples of the principal classes of synthetic binding media various pigments and extenders tube paint formulations and microscopic paint fragments taken from actual works of art Handbook of Chemometrics and Qualimetrics, 1997-12-12 Handbook of Chemometrics and Qualimetrics *Identification and Determination of Impurities in Drugs* S. quantitative determination of organic and inorganic impurities as well as residual solvents in bulk drugs and pharmaceutical formulations Since this is the best way to characterise the quality and stability of bulk drugs and pharmaceutical formulations this is the core activity in modern drug analysis Due to the very rapid development of the analytical methodologies available for this purpose and the similarly rapid increase of the demands as regards the purity of drugs it is an important task to give a summary of the problems and the various possibilities offered by modern analytical chemistry for their solution That is the aim of this book The book is methodology oriented In the first chapter some important aspects of the background of impurity related analytical studies toxicological pharmacopoeial aspects the characterisation of the sources of impurities and the role of impurity profiling in various fields of drug research production and therapeutic use are summarised Chapter two deals with related organic impurities the strategies for impurity profiling the use of chromatographic and related separation methods spectroscopic and hyphenated techniques The subject of the third chapter is the identification and determination of residual solvents The determination of inorganic impurities is discussed in chapter four The special problems of degradation products as impurities are dealt with in chapter five A separate chapter has been compiled to deal with one of the most up to date problems in contemporary pharmaceutical analysis the estimation of enantiomeric purity of chiral drugs Chapter seven is devoted to various approaches to solve the problem of polymorphic modifications as impurities Since in the broader sense of the word the microbiological purity of drugs and drug products also belongs to this circle the most important information from this field is summarised in chapter eight After the mainly methodology oriented chapters the final one concentrates on four groups of drugs peptides biotechnological products antibiotics and steroids in order to demonstrate the use of the methods described earlier
