synthesizes and illustrates the numerous new findings that have been made possible with light and electron microscopy. These include the recent introduction of new molecular and optical techniques such as immunohistochemical staining of neuron specific antigens and fluorescence in situ hybridization combined with visualization by confocal laser scanning microscopy. New approaches to analysing the structure of the nervous system are also included such as micro computational tomography, cryo soft X ray tomography and various 3 D visualization techniques. The book follows a systematic and phylogenetic structure covering a broad range of taxa interspersed with chapters focusing on selected topics in nervous system functioning which are presented as research highlights and perspectives. Epilepsy in Children, 2E Sheila J Wallace, Kevin Farrell, 2004-02-27. Epilepsy is the most common neurological disorder of childhood occurring both in children whose physical and cognitive states are otherwise normal as well as being a facet of a more generalised and severe brain disease. There are many manifestations of epilepsy and therefore a diversity of factors in underlying pathology, responses to treatment and prognosis. Full understanding requires knowledge of the basic science that underlies epilepsy and its causes and an appreciation of cognitive, psychiatric and social factors. This book is a comprehensive and up to date review of all aspects of childhood epilepsy for the specialist neurologist or paediatrician with an interest in this area. The first edition was praised for its valuable clinical approach to examining the nature of epileptic syndromes and for its appropriate and readable coverage of the underlying basic science features that are retained and expanded upon in this revision. Particular updates include full coverage of new developments in epidemiology, genetics, classification, imaging, drug therapy and other treatments. Several new chapters have been added covering eyelid myoclonia, Rasmussen's syndrome, cognitive and behavioural manifestations of epilepsy and vagal nerve stimulation. This book is essential reading for paediatric neurologists, epileptologists and paediatricians and will continue to provide invaluable support for any physician confronted by a child with epilepsy.

Safety Design for Space Systems Tommaso Sgobba, Gary Eugene Musgrave, Gary Johnson, Michael T. Kezirian, 2023-07-25. The lack of widespread education in space safety engineering and management has profound effects on project team effectiveness in integrating safety during design. On one side it slows down the professional development of junior safety engineers while on the other side it creates a sectarian attitude that isolates safety engineers from the rest of the project team. To speed up professional development, bridge the gap within the team and prevent hampered communication and missed feedback, the entire project team needs to acquire and develop a shared culture of space safety principles and techniques. The second edition of *Safety Design for Space*

Systems continues to address these issues with substantial updates to chapters such as battery safety life support systems robotic systems safety and fire safety This book also features new chapters on crew survivability design and nuclear space systems safety Finally the discussion of human rating concepts safety by design principles and safety management practices have also been revised and improved With contributions from leading experts worldwide this second edition represents an essential educational resource and reference tool for engineers and managers working on space projects Provides basic multidisciplinary knowledge on space systems safety design Addresses how space safety engineering and management can be implemented in practice Includes new chapters on crew survivability design and nuclear space systems safety Fully revised and updated to reflect the latest developments in the field
