Pain, 2002-06-06 The earth's biodiversity currently faces an extinction crisis that is unprecedented Conservationists attempt to intervene in the extinction process either locally by protecting or restoring important species and habitats or at national and international levels by influencing key policies and promoting debate Reliable information is the foundation upon which these efforts are based which places research at the heart of biodiversity conservation The role of research in such conservation is diverse It includes understanding why biodiversity is important defining units of biodiversity priority setting for species and sites managing endangered and declining populations understanding large scale processes making predictions about the future and interfacing with training education public awareness and policy initiatives Using examples from a wide range of bird conservation work worldwide researchers consider the principles underlying these issues and illustrate how these principles have been applied to address actual conservation problems for students practitioners and researchers in conservation biology Pelicans, Cormorants, and their Relatives J. Bryan Nelson, 2006-01-26 The pelecaniformes are a large and important group of seabirds containing many spectacular species This book addresses the breeding biology of the six pelecaniform families which comprise the closely related core groups pelicans cormorants shags darters gannets boobies and their more distant relatives the frigate birds and tropic birds Many fundamental questions can be addressed through the pelecaniformes Why do they breed in colonies What are the links between their feeding methods and their reproduction What part does territorial and pairing behaviour play in their life cycles These and scores of comparable issues including those related to man are woven here into a richly interpretative text The author's approach to the subject is threefold First the pelecaniformes are placed within the framework of four discrete disciplines with chapters on evolutionary relationships comparative behaviour ecology and the birds relationship with humans Secondly each of the six families is discussed elucidating the range of taxonomy behaviour and ecology within each Finally we progress to specific

level using the same structure as for the family accounts In this way each of the 60 odd species can be understood not just as discrete units but as part of their family and order The book is unique in its coverage of the entire order and in its combination of facts and interpretation Pelicans Cormorants and their Allies will enable readers not only to identify the many spectacular species which make up this large and important group of seabirds but also to understand their breeding biology

Top Predators in Marine Ecosystems C. J. Camphuysen, 2006-05-11 The sustainable exploitation of the marine environment depends upon our capacity to develop systems of management with predictable outcomes Unfortunately marine ecosystems are highly dynamic and this property could conflict with the objective of sustainable exploitation This book investigates the theory that the population and behavioural dynamics of predators at the upper end of marine food chains can be used to assist with management Since these species integrate the dynamics of marine ecosystems across a wide range of spatial and temporal scales they offer new sources of information that can be formally used in setting management objectives This book examines the current advances in the understanding of the ecology of marine predators and will investigate how information from these species could be used in management
