## **Seaports And Seaport Terminals:**

**Seaports and Seaport Terminals** James Harold Bird, 1971

**Ports in Proximity** César Ducruet, 2016-04-08 Ports in Proximity provides an overview of key contemporary research in the field through a broad range of international case studies. The concepts of strategic management, supply chain management, port and transport economics, and economic and transport geography are applied throughout the book to offer an in-depth understanding of the processes underlying spatial and functional dynamics in port systems. The opportunities for cooperation between competing adjacent ports is examined while the avenues for further joint research are identified, setting an agenda for further study.

**Shipping and Logistics Management** Yuen Ha (Venus) Lun, Kee Hung Lai, Tai Chiu Edwin Cheng, 2010-04-07 Shipping and Logistics Management serves to consolidate the knowledge its authors have acquired from being educators and observers of the shipping industry. Against the background of a global business environment, it explains how the shipping market functions, examining the strategic and operational issues that affect entrepreneurs in this industry. The authors discuss global trends and strategies in the shipping business, looking at the role of logistics service providers and at how the use of information technology can help shipping operations. Shipping and Logistics Management also aims to answer several important questions in the shipping industry, including: what are the shipping cost structures? what are the patterns of sea transport and how do companies in the shipping industry operate? An invaluable source of information for researchers and advanced or graduate students, Shipping and Logistics Management is also a useful reference for shipping practitioners and consultants.

**Seaports and Development** B. S. Hoyle, 2012-07-26 This book, originally published in 1983, demonstrates the importance of seaports in the growth of less developed countries. The author focuses on the character of port activity within the context of transport systems and regional economic planning. General principles of port development are illustrated by detailed reference to one Third World port group: that of the Indian Ocean coasts of Kenya and Tanzania. The objective is not merely to illustrate the character of one specific group of ports but to demonstrate methods of analysis and to underline the crucial role of ports in the development process.

**Handbook of Terminal Planning** Jürgen W. Böse, 2011-02-26 Container Terminals (CT) operate as central nodes in worldwide hub and spoke networks and link ocean-going vessels with smaller feeder vessels, as well as with inbound and outbound hinterland transportation systems using road, rail, or inland waterways. The volume of transcontinental container flows has gained appreciably over the last five decades; throughput figures of CT reached new records frequently with double-digit annual growth rates. Stimulated by throughput requirements and stronger competition between terminals settled in the same region or serving a similar hinterland, respectively, cost efficiency and throughput capabilities become more and more important. Nowadays, both terminal capacity and costs have to be regarded as key indicators for CT competitiveness. In respect of this steady growth, this handbook focuses on planning activities being aimed at order-of-magnitude improvements in terminal performance and economic

viability On the one hand the book is intended to provide readership with technological and organizational CT basics for strategic planning On the other hand this book offers methodical assistance for fundamental dimensioning of CT in terms of technique organization or man The former primarily considers comprehensive information about container handling technologies representing the state of the art for present terminal operations while the latter refers to methodological support comprising in particular quantitative solutions and modeling techniques for strategic terminal decisions as well as straightforward design guidelines The handbook includes an introductory contribution which gives an overview of strategic planning problems at CT and introduces the contributions of the volume with regard to their relationship in this field Moreover each paper contains a section or paragraph that describes the impact of findings investigated by the author s for problem solving in long term planning of CT as an application domain The handbook intends to provide solutions and insights that are valuable for both practitioners in industry who need effective planning approaches to overcome problems and weaknesses in terminal design development and researchers who would like to inform themselves about the state of the art in methodology of strategic terminal planning or be inspired by new ideas That is to say the handbook is addressed to terminal planners in practice as well as to students of maritime courses of study and application oriented researchers in the maritime field

*Port and Terminal* ,1923      **Soft Values of Seaports** E. van Hooydonk,2007 In present day society seaports have a very negative image which is mainly due to the environmental pressures and pollution risks they cause the monomaniac capitalist mentality of their operators the dubious reputation of the shipping industry the uninspired strictly utilitarian design of port facilities and the dehumanisation of port areas Currently the erosion of public support for seaports is a major issue in port management and policy

Port-Cities and their Hinterlands Robert Lee,Paul McNamara,2022-03-14 This interdisciplinary book brings together eleven original contributions by scholars in the United Kingdom continental Europe America and Japan which represent innovative and important research on the relationship between cities and their hinterlands They discuss the factors which determined the changing nature of port hinterland relations in particular and highlight the ways in which port cities have interacted and intersected with their different hinterlands as a result of both in and out migration cultural exchange and the wider flow of goods services and information Historically maritime commerce was a powerful driving force behind urbanisation and by 1850 seaports accounted for a significant proportion of the world s great cities Ports acted as nodal points for the flow of population and the dissemination of goods and services but their role as growth poles also affected the economic transformation of both their hinterlands and forelands In fact most ports irrespective of their size had a series of overlapping hinterlands whose shifting importance reflected changes in trading relations political frameworks migration patterns family networks and cultural exchange Urban historians have been criticised for being concerned primarily with self contained processes which operate within the boundaries of individual towns and cities and as a result the key relationships between cities and their hinterlands have often been neglected The

chapters in this work focus primarily on the determinants of port hinterland linkages and analyse these as distinct but interrelated fields of interaction Marking a significant contribution to the literature in this field Port Cities and their Hinterlands provides essential reading for students and scholars of the history of economics Ports and Terminals Han Ligteringen, 2022-01-31 By nature port planning is a multidisciplinary activity It involves expertise in the field of transport economics shipping nautical matters safety and logistics But also knowledge of waves and currents sediment transport and coastal morphology dredging and land reclamation and design of breakwaters and quays Hence port planning is teamwork But within this team the port planner plays a central role in developing the concepts and obtaining the required expertise at the right time Most port planners are civil engineers with hydraulic engineering training and experience The first part of this book Chapter 1 through 6 is aimed at providing the basic elements to perform this planning process In Chapter 7 the detailed planning of container terminals is treated including the logistic process Further attention is paid to design aspects typical for such terminals The objective is to provide the basis for an all round port engineer somebody who can participate in the design of any given type of port or terminal Chapters 8 14 present the planning aspects of other types of terminals **The role of mangroves in supporting ports and the shipping industry to reduce emissions and water pollution** Pham, H.T., Ngô, V.T., Pham, T.T., Bùi, T.T., Nguyễn Thị, L.G., 2022-04-05 **Integrating Seaports and Trade Corridors** Robert J. McCalla, Brian Slack, 2016-05-23 Seaport gateways and the corridors which connect them to widely dispersed hinterlands are of vital and essential importance to international trade and the world economy Distributing goods to ultimate land destinations or bringing the goods to seaports from inland origins is organizationally complex involving multiple actors This book furthers understanding about how this movement is organized the role of ports acting as gateways and the actions of corridor players A key question that confronts the shipping and port industries as well as public authorities is how to increase the benefits of maritime trade to the companies and institutions directly involved as well as the port city regions where the transfers take place This question is being posed in the midst of a global economic recession and trade downturn and in the context of contemporary policy frameworks whose goals are to generate economic benefits and efficiencies rather than to maximize traffic volumes This book puts into perspective the reality opportunities and challenges facing seaport gateways and corridors now and in the future The Geography of Transport Systems Jean-Paul Rodrigue, Claude Comtois, Brian Slack, 2013-07-18 Mobility is fundamental to economic and social activities such as commuting manufacturing or supplying energy Each movement has an origin a potential set of intermediate locations a destination and a nature which is linked with geographical attributes Transport systems composed of infrastructures modes and terminals are so embedded in the socio economic life of individuals institutions and corporations that they are often invisible to the consumer This is paradoxical as the perceived invisibility of transportation is derived from its efficiency Understanding how mobility is linked with geography is main the purpose of this book The third edition of The Geography of Transport Systems has been revised

and updated to provide an overview of the spatial aspects of transportation This text provides greater discussion of security energy green logistics as well as new and updated case studies a revised content structure and new figures Each chapter covers a specific conceptual dimension including networks modes terminals freight transportation urban transportation and environmental impacts A final chapter contains core methodologies linked with transport geography such as accessibility spatial interactions graph theory and Geographic Information Systems for transportation GIS T This book provides a comprehensive and accessible introduction to the field with a broad overview of its concepts methods and areas of application The accompanying website for this text contains a useful additional material including digital maps PowerPoint slides databases and links to further reading and websites The website can be accessed at <http://people.hofstra.edu/geotrans> This text is an essential resource for undergraduates studying transport geography as well as those interest in economic and urban geography transport planning and engineering

*Port Economics* Jan Owen Jansson, Dan Shneerson, 1982 This study applies modern economic principles to the operations of modern port facilities ranging from new ports in the planning stages for developing nations to established American and European ports retrofitted to handle container cargos and larger vessels It investigates all the links in the chain of port services the transfer of goods between land and sea transportation and offers recommendations for strengthening the weaker links Port Economics covers the historical development of port organization and technology production measures short and long term cost functions pricing and investment The capital input by the port authorities and the labor input by the cargo handling companies are discussed and the authors consider the utility of merging port and stevedoring charges Queuing processes are adjusted to fit the special circumstances of port traffic allowing for the measurement of such variables as throughput and congestion costs The theory developed for individual ports is extended to national port systems over time Throughout the book elements of the theory are tested empirically against data from ports in the United States Europe the Middle East and Africa The final chapter is a large scale case study of the Nigerian port system which serves to test the whole of the authors economic theory including such concepts developed in the later chapters as dynamic port system investment and optimal port charges Jan Owen Jansson is Chief Economist of the Swedish National Road and Traffic Research Institute Dan Shneerson is Senior Lecturer in Economics at the University of Haifa Their book is the eighth in MIT Press Transportation Studies Series edited by Marvin L Manheim

*Port Geography and Hinterland Development Dynamics* Mina Akhavan, 2020-09-25 This book illustrates and discusses the main characteristics of port city development dynamics with a focus on the fast growing city states of the Middle East which are emerging as key players in logistics and the global supply chain Maritime ports and the cities hosting them have long fascinated scholars geographers economists architects urban planners sociologists etc as they become centres of exchange where different social and urban environments meet at the intersection between land and sea Given that the current body of literature on the topic is biased mainly concerning the Western world and East Asian region with mono disciplinary tendencies this book outlines a

theoretical basis from a wide range of literature linking port city studies globalization theories and logistics and adopts a multidisciplinary perspective The main target audience of the book includes scholars and graduate students in urban studies spatial planning urban and regional economics logistics geography and transport geography with an interest in studying port geography and the port city interface port infrastructure development and port hinterland dynamics it will also benefit policymakers and urban planners whose work involves these topics

### **Container Terminals and Cargo Systems** Kap

Hwan Kim, Hans-Otto Günther, 2007-08-06 This book presents new insights and successful solutions to the operational problems of automated container terminals and cargo systems It comprises reports on the state of the art applications of quantitative methods as well as case studies and simulation results Its contributions are written by leading experts from academia and business and address practitioners and researchers in logistics transportation and management

*Seaside Operations Planning in Container Terminals* Frank Meisel, 2009-05-28 1 1 Motivation and Scope of Research Container terminals in seaports constitute interfaces between sea and land transport of goods in global transport chains These logistics facilities face an increasing demand for service capacity as is reflected by a tremendous growth in the worldwide container transshipments per year For example the top 20 terminals in the world showed an average relative increase of 14% with respect to the number of handled container units from 2006 to 2007 see Port of Hamburg Marketing 2008 In spite of this development competition is high among container terminals within the same region A terminal's customers first and foremost the vessel operators expect a high level of service quality where reliability is one of the most important dimensions see Wiegman et al 2001 Regarding the service of a vessel reliability means to realize all transshipment operations within its projected service time interval The reliability of terminal operations impacts the reliability of vessels in meeting their liner schedules According to Notteboom 2006 unexpected waiting times of vessels before berthing and unexpected low transshipment productivity at terminals are responsible for about 86% of liner schedule disturbances see Fig 1 1 Currently many terminal operators counteract this situation by extending their transshipment capacities They build new terminals or enlarge existing terminals and purchase new or upgrade existing equipment Ilmer 2005 provides an overview of current projects for building terminal capacity in northern Europe

### **Maritime Logistics** Dong-Wook Song, Photis

Panayides, 2012-04-03 Globalisation and the rapid increase in world trade in the past decade have contributed to greater demand for international transport and logistics and consequently the expansion of the maritime industry The dramatic changes in the mode of world trade and cargo transportation make it more important than ever to have a clear understanding of the way in which freight is transported by sea and the role of ports in this exchange Maritime Logistics examines the latest development knowledge and practices taking place in logistics and supply chain within the port and shipping industry Written by a team of international experts who provide a truly global perspective on this increasingly key area of logistics the book covers everything that students of logistics as well as those working within the industry should know and understand

including shipping lines dry bulk and port centric logistics      African Seaports and Maritime Economics in Historical Perspective Ayodeji Olukoju, Daniel Castillo Hidalgo, 2020-07-14 This book updates African maritime economic history to analyse the influence of seaports and seaborne trade processes of urbanization and development and the impact of globalization on port evolution within the different regions of Africa It succeeds the seminal collection edited by Hoyle Hilling which was conceived during a phase of sustained economic growth on the African continent and builds on a similar trend where African economies have experienced processes of economic growth and the relative improvement of welfare conditions It provides valuable insights on port evolution and the way the maritime sector has impacted the hinterland and the regional economic structures of the affected countries including the several and varied agents involved in these activities African Seaports and Maritime Economics in Historical Perspective will be useful for economists historians and geographers interested in African and maritime issues as well as policy makers interested in path dependence and long term analysis

*MIMA Bulletin Volume 26 (1) 2019* ,2019-06-01 In this issue of MIMA Bulletin mangrove management and conservation efforts are detailed in a special feature of the Kilim Karts Geoforest Park In addition Norsyihan Jamal makes a case for technology in the fisheries industry highlighting the many ways it has moved into the Industrial Revolution 4.0 and how it can be further improved Cheryl Rita Kaur in collaboration with Dr Vu Hai Dang on the other hand compared the ocean policy development process between Viet Nam and Malaysia Last and certainly not least Captain Sukjoon Yoon of the Republic of Korea Navy Ret discusses the issues and resolution for maritime disputes in Northeast Asia The range of topics included in this issue is wide and varied MIMA hopes that this edition of the Bulletin continues to be informative and useful to our readers
