Ship Motions and Drag Reduction Johannes Krzywinski Lunde, Stanley W. Doroff, 1966.

Microwave Remote Sensing of Sea Ice Frank D. Carsey, 1992-04-08. Published by the American Geophysical Union as part of the Geophysical Monograph Series Volume 68. Human activities in the polar regions have undergone incredible changes in this century. Among these changes is the revolution that satellites have brought about in obtaining information concerning polar geophysical processes. Satellites have flown for about three decades and the polar regions have been the subject of their routine surveillance for more than half that time. Our observations of polar regions have evolved from happenstance ship sightings and isolated harbor icing records to routine global records obtained by those satellites. Thanks to such abundant data we now know a great deal about the ice-covered seas which constitute about 10% of the Earth's surface. This explosion of information about sea ice has fascinated scientists for some 20 years. We are now at a point of transition in sea ice studies: we are concerned less about ice itself and more about its role in the climate system. This change in emphasis has been the prime stimulus for this book.

Developments in Maritime Transportation and Exploitation of Sea Resources Carlos Guedes Soares, Fernando López Peña, 2013-10-07. Covering recent developments in maritime transportation and exploitation of sea resources encompassing ocean and coastal areas, this book is intended for academics and professionals involved in the development of marine transportation and the exploitation of sea resources.

Air-Sea Interaction and Oceanic Extremes Lichuan Wu, Jinbao Song, Victor Alari, Leonie Esters, 2024-12-24. Air-sea interactions control the exchange of mass, momentum, and heat between the atmosphere and the ocean. Substantially, they significantly affect the development of atmospheric and oceanic systems from sub-mesoscale to global scales. Oceanic extremes, i.e., cyclones, storms, freak waves, polar lows, storm surge, etc., pose a significant hazard to offshore activities and coastal society. Air-sea interaction

processes are complex and play a central role in the development of those oceanic extremes Improved understanding of the air sea interaction processes and describing them in weather models and Earth System Models can improve their prediction and mitigate the potential damages The energy distribution affected by air sea interactions can change the large scale circulation and alter the climatology of the oceanic extremes Despite an overall improvement in the understanding of air sea interactions there are still many knowledge gaps particularly under extreme conditions
