Colour and Light in the Ocean Victor Martinez-Vicente,Astrid Bracher,Didier Ramon,Shubha Sathyendranath,Tiit Kutser,2020-03-26 CLEO publications in Frontiers in Marine Science Foreword Josef Aschbacher Director of ESA s Earth Observation Programmes Satellite data have drastically changed the view we have of the oceans Covering about 70% of Earth s surface oceans play a unique role for our planet and for our life but large areas remain unexplored and are difficult to reach Since the 1980s Earth orbiting satellites have helped to observe what is happening at the ocean surface Sensors like CZCS AVHRR SeaWifs and MODIS provided the first ocean colour data from space Starting in 2002 ESA s Medium Resolution Imaging Spectrometer MERIS on board the environmental satellite Envisat provided detailed information on phytoplankton biomass and concentrations of other matter in the global oceans These satellite observations laid the groundwork for studying the marine environment and how it responds to climate change and the research community has since delivered information on the variability of marine ecosystems Part of this work is reflected in this stunning collection of peer reviewed publications presented at the workshop Colour and Light in the Ocean from Earth Observation CLEO held at ESA s ESRIN site in Frascati Italy on 6 8 September 2016 The event attracted more than 160 participants from all over the world including remote sensing experts marine ecosystem modelers in situ observers and users of Earth observation data Scientifically the meeting covered applications in climate studies over primary productivity and ocean dynamics to pools of carbon and phytoplankton diversity at global and regional scales It also demonstrated the potential of Earth observation and its contribution to modern oceanography Looking to the future new satellites developed by ESA under the coordination of the European Commission will further our scientific and operational observations of the seas With Sentinel 3A in orbit and its twin Sentinel 3B following in 2017 there is a new category of data available for operational oceanographic applications and climate studies for years to come These data are free and easy to access by anyone interested Looking at the role of oceans in our daily lives I am sure that this collection of scientific excellence will be valued by scientists of today and will inspire the next generation to carry these ideas into the future **An Introduction to Planetary Atmospheres** Agustin

Sanchez-Lavega,2011-06-27 Planetary atmospheres is a relatively new interdisciplinary subject that incorporates various areas of the physical and chemical sciences including geophysics geophysical fluid dynamics atmospheric science astronomy and astrophysics Providing a much needed resource for this cross disciplinary field An Introduction to Planetary Atmospheres presents current knowledge on atmospheres and the fundamental mechanisms operating on them The author treats the topics in a comparative manner among the different solar system bodies what is known as comparative planetology Based on an established course this comprehensive text covers a panorama of solar system bodies and their relevant general

properties It explores the origin and evolution of atmospheres along with their chemical composition and thermal structure It also describes cloud formation and properties mechanisms in thin and upper atmospheres and meteorology and dynamics Each chapter focuses on these atmospheric topics in the way classically done for the Earth s atmosphere and summarizes the most important aspects in the field The study of planetary atmospheres is fundamental to understanding the origin of the solar system the formation mechanisms of planets and satellites and the day to day behavior and evolution of Earth s atmosphere With many interesting real world examples this book offers a unified vision of the chemical and physical processes occurring in planetary atmospheres Ancillaries are available at www.ajax.ehu.es/planetary_atmospheres

Climate Change Kristen St. John, Lawrence Krissek, 2025-08-22 This open access book on climate change assesses past climatic change from a geoscience perspective and directly and effectively addresses common misconceptions on climate and climate change A geoscience perspective on the multiple causes rates and consequences of climate change is essential context to assess modern climate change and our role in it as well as forecasting future climate conditions Yet most textbooks on climate change focus only on the very recent past e.g. last century are not sufficiently engaging for non scientists or explore paleoclimate science at a level too challenging for introductory students In addition a wide range of misconceptions and confusion exists in the general public about climate change Correcting misconceptions is an essential aspect of education but educational research has shown that it is challenging to achieve This textbook includes introductions to each thematic Part that directly identify relevant misconceptions and refute them with clear concise messages i.e. learning goals that are grounded in science and expanded on in the supporting chapters Such refutation style approaches have been shown to be effective at addressing misconceptions The book offers a clear trajectory of fundamental climate science concepts which are most beneficially combined to provide a valuable geoscience perspective on the causes rates and consequences of climate change It frames the collection of climate science chapters with impactful relevant social science context starting the book with a chapter that explores the reasons behind the disconnect between the scientific and public understanding of climate change and ending the book with a discussion of the intersection of ethics and climate change Short topical expansions or excursions are included as boxes within selected chapters This book will serve as a basic resource for learning about the lessons that the paleoclimate record offers to evaluate the seriousness of modern and future climate change *Linking Climate Change to Land Surface Change* S.J. McLaren, D.R. Kniveton, 2006-02-24 Our views and understanding of variations in climate geomorphological processes and the interrelationships that exist between climatic changes and land surface changes both now and in the past have developed greatly over the last decade This book aims to encapsulate some of these recent advances and focuses on the integration of research that has been conducted by geomorphologists and climatologists on linking climate and land surface changes This book is divided into two main parts Section A incorporates research that has concentrated on short term variations in climate whilst Section B looks at some of the work on long term climate

variability The volume concludes with a summary chapter that brings together the various ideas that have been presented in this work and other recent research in this general field This text will be of interest to upper level students of geomorphology Quaternary studies climatology earth sciences and environmental studies It will also be of use to researchers in these fields
