Seaweeds and their Role in Globally Changing Environments Alvaro Israel, Rachel Einav, Joseph Seckbach, 2010-06-18 Global warming is accelerating faster than the ability for natural repair and environmental stresses are damaging ecosystems all affecting physical and biological systems on Earth A new Nasa led study shows that human activity has caused climate changes resulting in permafrost thawing acid rain and lower productivity in lakes as well as increased emissions of greenhouse gases including CO₂ N₂O CH₄ CF₃ and CFC Marine plants play a vital role in maintaining the balance of marine environments while serving as a source of food for humankind and important chemical compounds Microalgae and seaweed have enormous potential for reducing global warming and climate change During photosynthesis algae grow draw CO₂ from the atmosphere release oxygen and produce solar biofuel Experts in the life of marine plant ecosystems in globally changing environments contributed chapters to this book The target readers are phycologists ecologists atmospheric scholars conservationists environmentalists and ecologically aware laymen

Marine Macroecology Jon D. Witman, Kaustuv Roy, 2009-10-15 Pioneered in the late 1980s the concept of macroecology a framework for studying ecological communities with a focus on patterns and processes revolutionized the field Although this approach has been applied mainly to terrestrial ecosystems there is increasing interest in quantifying macroecological patterns in the sea and understanding the processes that generate them Taking stock of the current work in the field and advocating a research agenda for the decades ahead Marine Macroecology draws together insights and approaches from a diverse group of scientists to show how marine ecology can benefit from the adoption of macroecological approaches Divided into three parts Marine Macroecology first provides an overview of marine diversity patterns and offers case studies of specific habitats and taxonomic groups In the second part contributors focus on process based explanations for marine ecological patterns The third part presents new approaches to understanding processes driving the macroecological patterns in the sea Uniting unique insights from different perspectives with the common goal of identifying and understanding large scale biodiversity patterns Marine Macroecology will inspire the next wave of marine ecologists to approach their research from a macroecological perspective

Functional Ingredients from Algae for Foods and Nutraceuticals Herminia

Dominguez, 2013-09-30 Algae have a long history of use as foods and for the production of food ingredients. There is also increasing interest in their exploitation as sources of bioactive compounds for use in functional foods and nutraceuticals. Functional ingredients from algae for foods and nutraceuticals reviews key topics in these areas encompassing both macroalgae seaweeds and microalgae. After a chapter introducing the concept of algae as a source of biologically active ingredients for the formulation of functional foods and nutraceuticals, part one explores the structure and occurrence of the major algal components. Chapters discuss the chemical structures of algal polysaccharides, algal lipids, fatty acids, and sterols; algal proteins, phlorotannins, and pigments; and minor compounds. Part two highlights biological properties of algae and algal components and includes chapters on the antioxidant properties of algal components, anticancer agents derived from marine algae, anti-obesity and anti-diabetic activities of algae, and algae and cardiovascular health. Chapters in part three focus on the extraction of compounds and fractions from algae and cover conventional and alternative technologies for the production of algal polysaccharides. Further chapters discuss enzymatic extraction, subcritical water extraction, and supercritical CO₂ extraction of bioactives from algae, and ultrasonic and microwave-assisted extraction and modification of algal components. Finally, chapters in part four explore applications of algae and algal components in foods, functional foods, and nutraceuticals, including the design of healthier foods and beverages containing whole algae, prebiotic properties of algae, and algae-supplemented products, algal hydrocolloids for the production and delivery of probiotic bacteria, and cosmeceuticals from algae. Functional ingredients from algae for foods and nutraceuticals is a comprehensive resource for chemists, chemical engineers, and medical researchers with an interest in algae, and those in the algaculture, food, and nutraceutical industries interested in the commercialisation of products made from algae. Provides an overview of the major compounds in algae, considering both macroalgae seaweeds and microalgae. Discusses methods for the extraction of bioactives from algae. Describes the use of algae and products derived from them in the food and nutraceutical industries.

Climate Change

Impacts on Fisheries and Aquaculture Bruce F. Phillips, Mónica Pérez-Ramírez, 2017-09-18

The first comprehensive review of the current and future effects of climate change on the world's fisheries and aquaculture operations. The first book of its kind, Climate Change Impacts on Fisheries and Aquaculture explores the impacts of climate change on global fisheries resources and on marine aquaculture. It also offers expert suggestions on possible adaptations to reduce those impacts. The world's climate is changing more rapidly than scientists had envisioned just a few years ago, and the potential impact of climate change on world food production is quite alarming. Nowhere is the sense of alarm more keenly felt than among those who study the warming of the world's oceans. Evidence of the dire effects of climate change on fisheries and fish farming has now mounted to such an extent that the need for a book such as this has become urgent. A landmark publication devoted exclusively to how climate change is affecting and is likely to affect commercially vital fisheries and aquaculture operations.

globally Climate Change Impacts on Fisheries and Aquaculture provides scientists and fishery managers with a summary of and reference point for information on the subject which has been gathered thus far Covers an array of critical topics and assesses reviews of climate change impacts on fisheries and aquaculture from many countries including Japan Mexico South Africa Australia Chile US UK New Zealand Pacific Islands India and others Features chapters on the effects of climate change on pelagic species cod lobsters plankton macroalgae seagrasses and coral reefs Reviews the spread of diseases economic and social impacts marine aquaculture and adaptation in aquaculture under climate change Includes special reports on the Antarctic Ocean the Caribbean Sea the Arctic Ocean and the Mediterranean Sea Extensive references throughout the book make this volume both a comprehensive text for general study and a reference guide to further research for fisheries scientists fisheries managers aquaculture personnel climate change specialists aquatic invertebrate and vertebrate biologists physiologists marine biologists economists environmentalist biologists and planners
