

ORGANIC CHEMISTRY I – PRACTICE EXERCISE

Exercise 1

One of the products that results when 1-bromo-2,2-dimethylcyclopentane is heated in ethanol is shown below. Give a mechanism by which it is formed and give the name of this mechanism.

Answer 1 : *E₁* mechanism with carbocation rearrangement

Exercise 2

Which diastereomer of 1-bromo-4-*t*-butylcyclohexane, the *cis* or the *trans*, undergoes elimination more rapidly when treated with sodium ethoxide? Explain your answer.

Answer 2

Due to the presence of the **bulky *t*-butyl group**, the ring is practically locked up in the most stable conformation with the bulky group being equatorial.

Of the two isomers, the *cis* is the only one that fulfills the antiperiplanar arrangement for *E2*, where the leaving group and adjacent proton must be anti to each other and in the same plane.

book addresses theoretical and practical examples in science education that on the one hand plays a key role in our understanding of the world and yet paradoxically now acknowledges a growing number of uncertainties of knowledge about the world. The material is in four sections that cover the learning and teaching of science from science literacy to multiple representations, science teacher education, the use of innovations and new technologies in science teaching and learning, and science learning in informal settings including outdoor environmental learning activities. Acknowledging the issues and challenges in science education, this book hopes to generate collaborative discussions among scholars, researchers, and educators to develop critical and creative ways of science teaching to improve and enrich the lives of our children and youths.
