Hard Bargains Linda R. Hirshman, Jane E. Larson, 1998 Men and women have always bargained for sex. In this controversial new book, philosopher, lawyer Linda Hirshman and legal historian Jane Larson provide the first comprehensive look at the politics of heterosexual sex in the West from Hammurabi's Code to Monica Lewinsky. Starting with an essential summary of the roots of Western sex in the ancient near East and early modern Europe, the book quickly focuses on the history of the sexual regulation in America which it describes in unprecedented detail. Hard Bargains also offers surprisingly workable proposals for a new sexual order: rape laws replaced by laws of sexual autonomy, adultery subjected to breach of contract action, prostitution considered an unfair labor practice. Hard Bargains takes a forthright and level headed look at all aspects of one of the biggest controversies in contemporary American society: heterosexual sex and delivers a radically new perspective on the sexual lives of women and men. Paradoxes in Geology U.

Briegel, Wen-Jiao Xiao, 2001-12-06 An interesting volume presenting the papers collected for the Festschrift Paradoxes in Modern Geology in honor of Professor Ken Jinghua Hsu on the occasion of his 70th birthday Paradox as defined in a dictionary is a statement contrary to accepted opinion That a broad discussion of paradoxes is fruitful for the advancement of science in general and geosciences in particular has been amply demonstrated by Professor Hsu throughout his distinguished career Not only has he propelled the geoscience community forward with his controversial statements a number of his former students who are currently in key positions at universities and in industry are influencing in a similar open minded way the present day thinking The wide scope this reasoning encompasses is demonstrated by the contributions to this book delineating paradoxes and problems in the fields of tectonics basic and applied geosciences petrology paleoceanography paleoclimatology and paleogeography kinematics and modelling

The Sedimentary Basins of the United States and Canada Andrew Miall, 2008-12-03 In recent years there have been rapid strides in our understanding of plate tectonic processes many developments in methods of basin analysis and the accumulation of much new surface and subsurface geological and geophysical data Projects such as COCORP in the United States and Lithoprobe in Canada have provided essential insights into the deep crustal structure of the continent Synthesis of all the available information about North America s geological regions has not been attempted systematically since the Decade of North American Geology project undertaken by the Geological Society of America and the Geological Survey of Canada nearly twenty years ago The book commences with a summary of the Phanerozoic geological history of the United States and Canada illustrated with a suite of new paleogeographic maps and tying in each of the subsequent regional chapters by the inclusion of numerous cross references This followed by a set of fifteen regional syntheses of the principal tectonic regions of the United States and Canada focusing on the stratigraphic and tectonic history of the major sedimentary basins Most of these chapters have been contributed by specialists drawing on their own research and providing interpretive summaries of a type not previously attempted Up to date synthesis of the sedimentary tectonic history of the major areas of the United States and Canada Up to date references Many new color maps

The Dial , 1895 **Nature** Sir Norman Lockyer, 1906 **Evolutionary Biology** Theodosius Dobzhansky, Max K. Hecht, William C. Steere, 2012-12-06 **Catastrophism** Richard J. Huggett, 1997 One of the most dramatic intellectual events of the last decade has been the stunning re emergence of the catastrophist paradigm in the biological and earth sciences From killer asteroids to emergent viruses it has become evident that the history of life on earth has been shaped far more than previous orthodoxies would allow by extreme events and non linear processes The old uniformitarian dogma of steady rate evolution has been decisively challenged by the research of contemporary neo catastrophists like Stephen Jay Gould David Raup Stuart Ross Taylor Ursula Marvin and Kenneth Hsu Whether debating the origin of the moon or the current human impact on the biosphere they urge us to recognize the radically event or chance driven structure of natural history Surveying these various theories of uniformitarian and neo catastrophist thought in a clear

and accessible fashion and seeking a path towards a new and workable synthesis Richard Hugget provides a superb introduction to the ideas which have defined the way we look at the world *The Saturday Review of Politics, Literature, Science and Art* ,1890
