The Routledge International Handbook of Dyscalculia and Mathematical Learning Difficulties Steve Chinn, 2014-11-20 Mathematics plays an important part in every person's life so why isn't everyone good at it? The Routledge International Handbook of Dyscalculia and Mathematical Learning Difficulties brings together commissioned pieces by a range of hand-picked influential international authors from a variety of disciplines all of whom share a high public profile. More than fifty experts write about mathematics learning difficulties and disabilities from a range of perspectives and answer questions such as: What are mathematics learning difficulties and disabilities? What are the key skills and concepts for learning mathematics? How will IT help now and in the future? What is the role of language and vocabulary? How should we teach mathematics? By posing notoriously difficult questions such as these and studying the answers, *The Routledge International Handbook of Dyscalculia and Mathematical Learning Difficulties* is the authoritative volume and is essential reading for academics in the field of mathematics. It is an incredibly important contribution to the study of dyscalculia and mathematical difficulties in children and young adults.

Decision Economics: Minds, Machines, and their Society Edgardo Bucciarelli, Shu-Heng Chen, Juan M. Corchado, Javier Parra D., 2021-08-16 This book is the result of a multi-year research project led and sponsored by the University of Chieti Pescara, National Chengchi University, University of Salamanca and Osaka University. It is the fifth volume to emerge from that international project held under the aegis of the United Nations Academic Impact in 2020. All the essays in this volume were virtually discussed at the University of L'Aquila as the venue of the 2nd International Conference on Decision Economics, a three-day global gathering of approximately one hundred scholars and practitioners and were subjected to thorough peer review by leading experts in the field. The essays reflect the extent, diversity and richness of several research areas, both normative and descriptive, and are an invaluable resource for graduate level and PhD students, academics, researchers, policymakers and other professionals, especially in the social and cognitive sciences. Given its interdisciplinary scope, the book subsequently delivers new approaches on how to contribute to the future of economics, providing alternative explanations for various socio-economic issues such as computable humanities, cognitive behavioural and experimental perspectives in economics, data analysis and machine learning, as well as research areas at the intersection of computer science, artificial intelligence, mathematics and statistics, agent-based modelling and the related. The editors are grateful to the scientific committee for its continuous support throughout the research project as well as to the many participants for their insightful comments and always probing questions. In any case, the collaboration involved in the project extends far beyond the group of authors published in this volume and is reflected in the quality of the essays published over the years.

Creativity and Technology in Mathematics Education Viktor Freiman, Janet Lynne Tassell, 2018-09-03 This volume provides new insights on creativity while focusing on innovative methodological approaches in research and practice of integrating technological tools and environments in mathematics teaching and learning. This work is being built on the discussions at the mini symposium on Creativity and Technology at the International Conference on Mathematical Creativity and Giftedness ICMCG in Denver USA 2014 and other contributions to the topic. The book emphasizes a diversity of views, a variety of contexts, angles, and cultures of thought as well as mathematical and educational practices. The authors of each chapter explore the potential of technology to foster creative and divergent mathematical thinking, problem solving, and problem posing; creative use of dynamic, multimodal, and interactive software by teachers and learners as well as other digital media and tools while widening and enriching transdisciplinary and interdisciplinary connections in mathematics classroom. Along with ground-breaking innovative approaches, the book aims to provide researchers and practitioners with new paths for diversification of opportunities for all students to become more creative and innovative mathematics learners. A framework for dynamic learning conditions of leveraging mathematical creativity with technology is an outcome of the book as well.

Distance Learning, E-Learning and Blended Learning in Mathematics Education Jason Silverman, Veronica Hoyos, 2018-07-20 This book builds on current and emerging research in distance learning, e-learning, and blended learning. Specifically, it tests the boundaries of what is known by examining and discussing recent research and development in teaching and learning based on these modalities with a focus on lifelong mathematics learning and teaching. The book is organized in four sections. The first section focuses on the incorporation of new technologies into mathematics classrooms through the construction or use of digital teaching and learning platforms. The second section presents a wide range of perspectives on the study and implementation of different tutoring systems and/or computer-assisted math instruction. The third section presents four new innovations in mathematics learning and/or

mathematics teacher education that involve the development of novel interfaces for communicating mathematical ideas and analyzing student thinking and student work Finally the fourth section presents the latest work on the construction and implementation of new MOOCs and rich media platforms developed to carry out specialized mathematics teacher education
