Migraine in Medicine Paolo Martelletti,2022-08-05 This book on migraine is the first machine generated scientific book in medicine published by Springer Nature and reflects a new publication format which focuses on literature reviews state of the art computer algorithms were applied to select relevant sources from Springer Nature journal articles rearrange them in a topical order and provide short summaries of these articles The result is the auto summarization of current texts organized by means of a similarity based clustering routine in coherent chapters and sections The human intervention of a world renowned expert in this field grants the scientific soundness and appropriate organization of the contents identified The AI based approach seemed especially suitable to provide an innovative perspective as the topics are indeed both complex interdisciplinary and multidisciplinary as is migraine the most important among the chronic non communicable diseases

under the age of 50s The result of this innovative process will be of help especially for readers with limited time interested in migraine and wishing to learn more about the subject quickly and particularly if they are new to the topic Springer Nature seeks to support anyone who needs a fast and effective start in their content discovery journey from the undergraduate student exploring interdisciplinary content to Master or PhD thesis developing research questions to the practitioner seeking support materials this book can serve as an inspiration to name a few examples *Handbook of Assessment in Childhood Psychopathology* Cynthia L. Frame,Johnny L. Matson,2013-11-21 One of the most important practical problems in child psychology and psychia try is the differential diagnosis of emotional disorders Until recently the gener al mode of assessment had been to apply to children the characteristics of psychopathology that were evident in adults In addition there had been few assessment tools available for use with children aside from modified versions of adult instruments Understandably this approach was controversial and dissatisfaction with it led to the more recent knowledge that adult and child problems may be manifested quite differently The third edition of the Diagnostic and Statistical Manual of Mental Disorders takes these factors into account much more extensively than previous editions Furthermore a great deal of research on methodology in child assessment procedures has emerged recently Yet in spite of these advances practicing clinicians are still frequently at a loss in moving from the characteristics of the disturbed child before them to the final assign ment of a psychiatric diagnosis The focus of this book is to outline the various methods of viewing and categorizing the wide range childhood psycho pathology with special emphasis on the end product of making a differential diagnosis Our goal was to make this book unique in several ways First we attempted to cover a wider range of disorders than is typical in currently available hand books
