Coasts and Estuaries Eric Wolanski, John W. Day, Michael Elliott, Ramachandran Ramesh, 2019-01-24 *Coasts and Estuaries: The Future* provides valuable information on how we can protect and maintain natural ecological structures while also allowing estuaries to deliver services that produce societal goods and benefits. These issues are addressed through chapters detailing case studies from estuaries and coastal waters worldwide, presenting a full range of natural variability and human pressures. Following this, a series of chapters written by scientific leaders worldwide synthesizes the problems and offers solutions for specific issues, graded within the framework of the socio-economic environmental mosaic. These include fisheries, climate change, coastal megacities, evolving human-nature interactions, remediation measures, and integrated coastal management. The problems faced by half of the world living near coasts are truly a worldwide challenge as well as an opportunity for scientists to study commonalities and differences and provide solutions. This book is centered around the proposed DAPSI-WRM framework, where drivers of basic human needs require activities that each produce pressures. The pressures are mechanisms of state change on the natural system and impacts on societal welfare, including well-being. These problems then require responses which are the solutions relating to governance, socio-economic and cultural measures. Scharin et al. 2016 *Covers estuaries and coastal seas worldwide*, integrating their commonality, differences, and solutions for sustainability. Includes global case studies from leading worldwide contributors with accompanying boxes highlighting a synopsis about a particular estuary and coastal sea, making all information easy to find. Presents full-color images to aid the reader in a better understanding of details of each case study. Provides a multi-disciplinary approach linking biology, physics, climate, and social sciences.

Ceramics, Cuisine and Culture Michela Spataro, Alexandra Villing, 2015-10-31 The 23 papers presented here are the product of the interdisciplinary exchange of ideas and approaches to the study of kitchen pottery between archaeologists, material scientists, historians, and ethnoarchaeologists. They aim to set a vital but long-neglected category of evidence in its wider social, political, and economic contexts. Structured around main themes concerning technical aspects of pottery production, cooking as socioeconomic practice, and changing tastes, culinary identities, and cross-cultural encounters, a range of social, economic, and technological

models are discussed on the basis of insights gained from the study of kitchen pottery production use and evolution Much discussion and work in the last decade has focussed on technical and social aspects of coarse ware and in particular kitchen ware The chapters in this volume contribute to this debate moving kitchen pottery beyond the Binfordian technomic category and embracing a wider view linking processualism ceramic ecology behavioral schools and ethnoarchaeology to research on historical developments and cultural transformations covering a broad geographical area of the Mediterranean region and spanning a long chronological sequence
