### *Summary*

The paper analyses selected philosophical aspects of Stanisław Lem's *Solaris*. I argue that there is an interesting similarity between the history of "Solarist studies" – the fictional scientific discipline depicted by Lem and cognitive science. I show that both disciplines go through similar stages as they try to describe their main subject (the planet Solaris and human consciousness respectively). In the further part of the paper, I focus on two problems identified in cognitive science that can be directly related to the themes found in *Solaris*: the problem of the detection of intelligence and the problem of the notion of mental representations.

I finish the paper by looking at the mysterious guests that stalk the main protagonists and show that they can be understood as heuristic models that are taken into account in the theories of mind uploading.

succeeded in being admitted to the University of Hamburg only after submitting a comparative analysis of the history of early Greek and early Western philosophy to the late Professor G Ralfs He gave me much encouragement and remained one of my main academic sponsors during the years in Hamburg Recently I translated into English the manuscript that had opened the doors of the university for me and extended it to the history of psychology The results present the unfolding of an intellectual theme as if it were an historical dialogue They chaps 10 and 11 are perhaps controversial achievements but they are among my proudest Before I began my studies in psychology and philosophy I spent almost two years in physics and mathematics Subsequently I began to approach psychology with a natural science emphasis Even when I began to shift my attention from general experimental to developmental psychology especially gerontology I continued to maintain this orientation and deemphasized my historical interest This interest did not find any resonance in the developmental research and theory of these years anyhow

*Developmental Work Research* Yrjö Engeström, 2005-01-01  
Developmental work research is an innovative approach to the study and reshaping of work and learning It expands cultural historical activity theory by bringing it to the domains of work technology and organizations The world of work is in turmoil increasingly dominated by runaway objects generated by globalization and greed global markets are such massive objects out of control Yet it is the object that motivates work and generates visions of better future The use values of objects have not vanished although they are more difficult to grasp than perhaps ever before Developmental work research rediscovers and expands use values in runaway objects In workplace interventions it engages practitioners in expansive re forging of the objects of their work Cover
