Religions and Extraterrestrial Life David A. Weintraub, 2014-07-16 In the twenty first

century the debate about life on other worlds is quickly changing from the realm of speculation to the domain of hard science. Within a few years as a consequence of the rapid discovery by astronomers of planets around other stars, astronomers very likely will have discovered clear evidence of life beyond the Earth. Such a discovery of extraterrestrial life will change everything. Knowing the answer as to whether humanity has company in the universe will trigger one of the greatest intellectual revolutions in history, not the least of which will be a challenge for at least some terrestrial religions. Which religions will handle the discovery of extraterrestrial life with ease and which will struggle to assimilate this new knowledge about our place in the universe? Some religions as currently practiced appear to only be viable on Earth. Other religions could be practiced on distant worlds but nevertheless identify both Earth as a place and humankind as a species of singular spiritual religious importance while some religions could be practiced equally well anywhere in the universe by any sentient beings. Weintraub guides readers on an invigorating tour of the world's most widely practiced religions. It reveals what if anything each religion has to say about the possibility that extraterrestrial life exists and how or if a particular religion would work on other planets in distant parts of the universe.

Yet abuses of land, water, and air continue to compromise the health of native people and their land rights. This fascinating book explores this intimate relationship between people and the land and environment and health. Here is an important message for health care providers, ecologists, and those who attempt to live their lives in harmony with the earth.

Our Tribe Chanting Andrew Ramer, 2025-01-28. We gay men come from every other people. In this time of social, political, and environmental challenges, we have a sacred role in coming in to who we are so that together we can help to unify and heal the world, and the tales, stories, poems, and rituals in this book were gathered together to support us in doing that. *Our Tribe Chanting* is the final stand-alone volume in a groundbreaking trilogy that begins with *Two Flutes Playing* and *Two Hearts Dancing*.

Lessons Learned in Protecting and Restoring Biodiversity Bonnie L. Harper-Lore, Gary K. Lore, 2024-09-11. We have everything we need to begin solving this crisis with the exception of the will to act. But in America, our will to take action is itself a renewable resource. Al Gore, 2002. This book explains why we should take action and how to do so, giving insights, saving time and money for future generations. Earth's biodiversity is threatened in many ways, including by climate change, invasive species, and development. Conservation response cannot be defined by political boundaries; yet lands are commonly managed at the local, state, and national levels. These authors' actions from all levels crossed lines to partner and get things done for the greater good. Experts, educators, scientists, practitioners, citizens, and policymakers took action and contributed to the present volume. Conservation requires a multidisciplinary approach, and so herein some 50 disciplines inform and inspire future practices and policies. Students and professionals alike in applied ecology, wildlife biology, entomology, botany, land management, landscape architecture, journalism, ethics, and public policy benefit from these authorities' stories.

Risk Management in a Hazardous

Environment Michael Bollig, 2010-05-10 A research focus on hazards risk perception and risk minimizing strategies is relatively new in the social and environmental sciences This volume by a prominent scholar of East African societies is a powerful example of this growing interest Earlier theory and research tended to describe social and economic systems in some form of equilibrium However recent thinking in human ecology evolutionary biology not to mention in economic and political theory has come to assign to risk a prominent role in predictive modeling of behavior It turns out that risk minimalization is central to the understanding of individual strategies and numerous social institutions It is not simply a peripheral and transient moment in a group s history Anthropologists interested in forager societies have emphasized risk management strategies as a major force shaping hunting and gathering routines and structuring institutions of food sharing and territorial behavior This book builds on some of these developments but through the analysis of quite complex pastoral and farming peoples and in populations with substantial known histories The method of analysis depends heavily on the controlled comparisons of different populations sharing some cultural characteristics but differing in exposure to certain risks or hazards The central questions guiding this approach are 1 How are hazards generated through environmental variation and degradation through increasing internal stratification violent conflicts and marginalization 2 How do these hazards result in damages to single households or to individual actors and how do these costs vary within one society 3 How are hazards perceived by the people affected 4 How do actors of different wealth social status age and gender try to minimize risks by delimiting the effect of damages during an on going crisis and what kind of institutionalized measures do they design to insure themselves against hazards preventing their occurrence or limiting their effects 5 How is risk minimization affected by cultural innovation and how can the importance of the quest for enhanced security as a driving force of cultural evolution be estimated
