## **Sacrificing The Forest Environmental And Social Struggles In Chiapas:**

Sacrificing The Forest Karen O'brien, 2018-05-04 The Selva Lacandona of Chiapas Mexico has received a tremendous amount of attention since the Zapatista uprising began in 1994 Concerns have focused on both the rapid rate of deforestation in Mexico's largest tropical rain forest and the social marginalization of its inhabitants which is considered to be a root cause of the uprising In this book Karen O'Brien presents an insightful analysis of how deforestation and social struggles are related in this region and then considers the implications of these links for the remaining forest A critical analysis of deforestation rates and patterns in the Selva Lacandona region provides the point of departure for this study Using satellite imagery and her own field work O'Brien presents an original estimate of forest loss She then uses an approach derived from political ecology to trace the links between social processes and deforestation Instead of focusing exclusively on the driving forces of deforestation she argues that an analysis of the countervailing forces of conservation efforts is crucial to understanding the configuration of the present day forest and the conflicts that surround it Unless these forces can be fused O'Brien contends the future of the Selva Lacandona will continue to be shaped by the tensions among social economic and environmental objectives A valuable tool for scholars of deforestation environmental change and political ecology *Sacrificing the Forest* will also be of interest to readers trying to understand the current situation in Chiapas

**Environmental Issues in Latin America and the Caribbean** Aldemaro Romero, Sarah E. West, 2006-02-23 We began this book with a simple goal to assemble a collection of readings for an undergraduate interdisciplinary course taught by one of us AR at Macalester College This course explored environmental problems and solutions in Latin America and the Caribbean using both natural science and social science methods After a literature search failed to produce an anthology of interdisciplinary readings appropriate for the course we set out to compile one We sought papers that dealt with the most salient environmental problems in the region that were written by experts and that were appropriate for undergraduate students Most importantly we sought papers that clearly demonstrate the contributions that experts from one discipline can make to analysis in another discipline We sought papers that for example show how biological species assessments can be used to inform the politics of biodiversity conservation We sought papers that show how economic analysis can be used to predict the likely effects of human behavior on ecosystems We sought papers that pay close attention to how institutions both national and international affect the outcome of environmental initiatives To find essays that fit our needs we sent out a world wide call for papers chose the most promising submissions and subjected these submissions to peer review The twelve approved essays represent the work of researchers from Latin America and the Caribbean the United States Canada Europe and Australia All the authors have direct experience with Latin America and the Caribbean and the region's problems

Reinventing the Lacandón Brian Gollnick, 2022-08-23 Before massive deforestation began in the 1960s the Lacand n jungle which lies on the border of Mexico and Guatemala was part of the largest tropical rain forest north of the Amazon The destruction of the Lacand n occurred with little attention from the international press until January 1 1994 when a group of armed Maya rebels led by a charismatic spokesperson who called himself Subcomandante Marcos emerged from jungle communities and briefly occupied several towns in the Mexican state of Chiapas These rebels known as the Zapatista National Liberation Army became front page news around the globe and they used their notoriety to issue rhetorically powerful communiqu s that denounced political corruption the Mexican government s treatment of indigenous peoples and the negative impact of globalization As Brian Gollnick reveals the Zapatista communiqu s had deeper roots in the Mayan rain forest than Westerners realized and he points out that the very idea of the jungle is also deeply rooted though in different

ways in the Western imagination Gollnick draws on theoretical innovations offered by subaltern studies to discover oral traces left by indigenous inhabitants in dominant cultural productions He explores both how the jungle region and its inhabitants have been represented in literary writings from the time of the Spanish conquest to the present and how the indigenous people have represented themselves in such works including post colonial and anti colonial narratives poetry video and photography His goal is to show how popular and elite cultures have interacted in creating depictions of life in the rain forest and to offer new critical vocabularies for analyzing forms of cross cultural expression *Deforesting the Earth* Michael Williams, 2003 Clearing in the deep past Reaching out europe and the wider world The global forest **Las Abejas** Marco Tavanti, 2014-01-27 Las Abejas came to be known by the international community as the civil counterpart to the neozapatista movements and as a Christian pacifist movement This book presents the voices of Las Abejas and of numerous collaborators alongside an innovative theoretical analysis of the dynamics of identity construction The uniqueness of this study is the analysis of the role of international human rights observers in relation to indigenous communities in resistance In this fascinating study Marco Tavanti explains how cultural religious political human rights and nonviolent frameworks combine in a syncretic identity of resistance
