Macroeconomic Linkage:

Macroeconomic Linkage Takatoshi Ito, Anne O. Krueger, 2009-02-15 This volume explores East Asia's macroeconomic experience in the 1980s and the economic impact of East Asia's growth on the rest of the world. The authors explore the causes of capital flows, changes in trade balances and exchange rate fluctuations in East Asia and their effects on other countries. These fourteen papers are organized around four themes: the overall determinants of growth and trading relations in the East Asian region; monetary policies in relation to capital controls and capital accounts; the impact of exchange rate behavior on industrial structure and the potential for greater regional integration. The contributors examine interactions among exchange rate movements, trade balances and capital flows; how government monetary policy affects capital flows; the effect of exchange rates on industrial structure, inventories and prices; and the extent of regional integration in East Asia.

Macroeconomic Linkages Between Hong Kong and Mainland China Hans GENBERY, Dong HE, 2008-07-01 This volume sheds light on the important policy issues facing both Hong Kong and the Mainland, including how resilient the Hong Kong economy is against external shocks; how large portfolio capital outflows from China will be once its capital account is liberalized; and in what ways fund flows between Hong Kong and the Mainland affect Hong Kong's monetary and financial conditions. With 11 essays, this monograph can be divided into 2 parts. Part I studies the real linkages between Hong Kong and the Mainland, while Part II focuses on the financial linkages. A detailed introduction written by the editors will serve as a non-technical summary of the essays. Published by City University of Hong Kong Press.

Macro-Financial Linkages in the Pacific Region Akira Kohsaka, 2015-03-05 Growth perspectives in emerging market economies are increasingly dependent on international capital flows in recent decades because of their influences on business cycles. In fact, volatile international capital flows have been one of the main concerns for the macroeconomic policy authorities. Focusing on emerging economies in the Pacific region, this book reveals how they are different from those in other regions in terms of international macro-financial linkages to the global capital market and domestic financial development. The book also discusses how these characteristics have interacted with their macroeconomic policy regimes and their macroeconomic performance throughout the two major international financial crises in the past more than two decades. It suggests facts that have strengthened the resilience of these emerging economies in the Pacific region against the global financial crisis, along with the intensified intra-regional economic integration through trade and investment. The book also examines their macroeconomic management, focusing on monetary policy regimes and suggests that their factual unorthodox policies with exchange rate management and capital controls have contributed to their resilience against the intrinsic volatility of the international capital market and financial flows.

Davis, 2010-08-04 Much has been written about a state's use of the threat of military force or economic sanctions to change the behavior of another state Less is known about the use of positive measures such as economic assistance and investment as a means of influence This study looks at the ways in which government officials use economic instruments for foreign policy gains More specifically it examines the means by which a government can enhance its efforts at economic persuasion by inducing domestic business trade and investing in the target nation The author demonstrates the domestic conditions under which the state can use commercial economic incentives to achieve foreign policy goals especially where these incentives are meant to induce cooperative behavior from another state Using the process of German Polish reconciliation in the 1970s and 1980s as a case study *The Art of Economic Persuasion*

argues that complex institutional links between the German government and the German business community enabled the government to encourage commercial relations with Poland which supported the government's policies. With singular access to archives of business associations in Germany as well as numerous interviews with German and Polish officials the author carefully retraces German foreign policy towards Poland in the 1970s and 1980s. *The Art of Economic Persuasion* is a theoretical addition to the literature on international political economy and international relations. It will be of interest to specialists in international relations, foreign policy and international political economy as well as economists, political scientists and historians of Germany, Poland, the United States and Cold War relations. Patricia Davis is Assistant Professor of Government and International Studies, University of Notre Dame.

International Capital Flows Martin Feldstein, 2007-12-01

Recent changes in technology along with the opening up of many regions previously closed to investment have led to explosive growth in the international movement of capital. Flows from foreign direct investment and debt and equity financing can bring countries substantial gains by augmenting local savings and by improving technology and incentives. Investing companies acquire market access, lower cost inputs and opportunities for profitable introductions of production methods in the countries where they invest. But as was underscored recently by the economic and financial crises in several Asian countries, capital flows can also bring risks. Although there is no simple explanation of the currency crisis in Asia, it is clear that fixed exchange rates and chronic deficits increased the likelihood of a breakdown. Similarly, during the 1970s the United States and other industrial countries loaned OPEC surpluses to borrowers in Latin America. But when the U.S. Federal Reserve raised interest rates to control soaring inflation, the result was a widespread debt moratorium in Latin America as many countries throughout the region struggled to pay the high interest on their foreign loans.

International Capital Flows contains recent work by eminent scholars and practitioners on the experience of capital flows to Latin America, Asia and eastern Europe. These papers discuss the role of banks, equity markets and foreign direct investment in international capital flows and the risks that investors and others face with these transactions. By focusing on capital flows, productivity and determinants and the policy issues they raise, this collection is a valuable resource for economists, policymakers and financial market participants.
